On September 1, 1961, as amended on December 18, 1963, in Docket No. CI62–247, and on December 3, 1962, in Docket No. CI63–708, Brooks Gas filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the sale of natural gas to the Mertzon Corporation (Mertzon) and to Northern Gas, respectively, all as more fully set forth in the applications in said dockets.

In Docket No. CI62–247 Brooks Gas proposes to sell to Mertzon natural gas purchased from several producers in the Brooks Field, Irion County, Texas. Said gas will be transported and delivered by Northern Natural Gas Pipeline Company (Northern Pipeline) to the Mertzon gasoline plant where it will be processed by Brooks Gas with Mertzon's equipment as well as with additional equipment owned and installed by Brooks Gas. The residue gas will then be sold to Mertzon who in turn will resell and deliver said gas to Northern Pipeline. The proposed sale to Mertzon will be made pursuant to a contract, dated January 5, 1961, under which the rate is 12.25 cents per Mcf (14.65 psia) less a flat monthly fee of $1,500 due Mertzon for use of its gasoline facilities by Brooks Gas. Concurrently with the filing of its application, Brooks Gas tendered for

filing its FPC Gas Rate Schedule No. 1 covering the proposed sale in Docket No. CI62-247.

In Docket No. CI63-708 Brooks Gas proposes to sell to Northern Gas natural gas purchased from producers in the Velrex Field, Schleicher County, Texas. The subject gas will be transported from said field as proposed and described above in Docket No. CP64-121. The proposed sale will be made pursuant to a contract, dated September 14, 1962, and at a rate of 16.0 cents per Mcf (14.65 psia).

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, amendment and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Brooks Pipe Line Co., a Texas corporation having its principal place of business in Houston, Texas, upon the acquisition of the facilities and the commencement of operation thereof for which authorization is requested in Docket No. CP64-121, will be engaged in the transportation of natural gas in interstate commerce and will be, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Applicant, Brooks Gas Corporation, an independent producer of natural gas, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities to be acquired and operated by Brooks Pipe, as hereinbefore described and as more fully described in the application in Docket No. CP64-121, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof and the proposed transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas by Brooks Gas hereinbefore described, as more fully described in the application, as amended, in Docket No. CI62-247, and in the application in Docket No. CI63-708, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by Brooks Gas, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sales of natural gas by Brooks Gas, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) The acquisition and operation of the facilities and the proposed transportation of natural gas by Brooks Pipe are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Brooks Pipe and Brooks Gas are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter to Brooks Pipe and the rights granted thereunder be conditioned upon Brooks Pipe's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(9) Brooks Gas' proposed FPC Gas Rate Schedule No. 1 should be accepted for filing to become effective on the date of initial delivery.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Brooks Pipe Line Co., to acquire and operate the subject facilities and to transport natural gas as hereinbefore described, all as more fully described in the application in Docket No. CP64-121, upon the terms and conditions of this order.

(B) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the sales by Brooks Gas Corporation of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore described and as more fully described in the applications in Docket Nos. CI62-247 and CI63-708.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized to be acquired and operated by Brooks Pipe shall be acquired and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(E) The certificates issued to Brooks Gas in paragraph (B) above are not transferable and shall be effective only so long as Brooks Gas continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificates issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Brooks Gas. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificates.

(G) Brooks Gas' FPC Gas Rate Schedule No. 1 be and the same is hereby accepted for filing to become effective on the date of initial delivery.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-285

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 10, 1964)

On May 28, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP64-285 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a tap, meter and regulator equipment on its Pampa 20-inch transmission line at a point located in Harper County, Kansas. The purpose of the proposed facilities is to enable Applicant to make during a two-month period estimated sales of 27,600 Mcf of natural gas to Mid-Kansas Construction Company for use as fuel in heating asphalt for state highway construction, all as more fully described in the application.

The estimated cost of the proposed facilities is $2,200, which will be financed from funds on hand.

A temporary certificate of public convenience and necessity was issued on June 26, 1964. Service to this customer will not impair Applicant's ability to serve its existing customers.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Bartlesville, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas as hereinbefore described are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued upon the terms and conditions of this order, authorizing Applicant to construct and operate the proposed facilities hereinbefore described, and to deliver natural gas to Mid-Kansas Construction Company for the purposes stated in the application.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of said Regulations.

(C) The certificate issued by paragraph (A) above is subject to the express condition that the proposed facilities be removed upon completion of the instant road construction project, and that Applicant notify the Commission of the date of such removal.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-234

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND PERMITTING WITHDRAWAL OF INTERVENTION PETITION

(Issued August 10, 1964)

On April 13, 1964, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64-234 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the abandonment of certain other natural gas facilities, to enable Applicant to increase its Rocky Mountain transmission capacity to 810,000 Mcf per day to meet the 1964-65 requirements of existing customers and to offset the decline in delivery pressures from certain producers in the Mocane area.

The new facilities which Applicant requests authorization to construct consist of a 32.0-mile 10¾-inch pipeline Trinidad Lateral extension and a 2,640 horsepower Mocane Compressor Station. The existing facilities proposed to be retired to modernize and provide greater capacity and more dependable and safer service on Applicant's system are: the 18.4-mile 8⅝-inch LaJunta Lateral, a 27.0-mile section of the 22-inch Amarillo-Denver Main Line and the 10.0-mile 16-inch CF&I-South Pueblo Lateral.

The total estimated cost of new facilities under this application is $2,151,181, with certain related facilities to cost $80,022, which costs will be financed from current working funds or interim bank loans.

The proposed Trinidad Lateral extension will replace the LaJunta Lateral and the 27.0-mile section of the Amarillo-Denver Main Line (which are being retired) and will make possible increased deliveries to Raton Natural Gas Company (Raton), an existing customer, which is expected to apply for authorization to expand its system to serve a new area between Raton and Las Vegas, New Mexico. In the instant application, Applicant asks removal of the present volume restriction of 2,100 Mcf per day on its deliveries to Raton contained in the Commission's order issued July 19, 1963, 30 FPC 356, in Docket

No. CP63-344 (Phase One) to permit deliveries of up to 7,022 Mcf per day to Raton.

Due notice of the subject application has been given by publication in the Federal Register on June 27, 1964 (29 F.R. 8189). On July 15, 1964, Transwestern Pipeline Company filed a petition for permission to intervene in this proceeding but on July 28, 1964, upon consideration of Applicant's answer filed July 24, 1964, to said petition, Transwestern filed a withdrawal of its petition. No other petition to intervene, notice of intervention or protest to the granting of the application has been filed herein.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities proposed to be constructed and operated as hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Said construction and operation of the facilities proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(6) The facilities proposed to be abandoned by Applicant as hereinbefore set forth, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The abandonment of facilities by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(8) It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act to amend, as hereinafter ordered, the Commission's order issued July 19, 1963 (30 FPC 356), in Docket No. CP63-344 (Phase One), *et al.* by removing therefrom the volume restriction of 2100 Mcf per day on Applicant's deliveries to Raton Natural Gas Company to enable Raton to meet its estimated third year requirements of 7022 Mcf per day.

(9) Good cause has been shown for permitting the withdrawal of the petition to intervene filed by Transwestern Pipeline Company on July 15, 1964.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months of the date on which this order issues.

(D) Permission for an approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(E) The Commission's order issued July 19, 1963, in Docket No. CP63-344 (Phase One), *et al.* is hereby amended by removing therefrom the volume restriction of 2100 Mcf per day on Applicant's deliveries to Raton Natural Gas Company to enable Raton to meet its estimated third year requirements of 7022 Mcf per day.

(F) The petition for permission to intervene filed in this proceeding on July 15, 1964, by Transwestern Pipeline Company is hereby permitted to be withdrawn effective on the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64-268

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 10, 1964)

On April 30, 1964, Lone Star Gas Company (Applicant) filed in Docket No. CP64-268 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 10.7 miles of 8-inch pipeline extending from the terminus of existing Line 0-38-1 near its junction with Line E-22 in a northeasterly direction to Line E-26 near its junction with Line E in Red River County, Texas.

The facilities above described will be used to deliver additional volumes of natural gas from Applicant's transmission system to Dierks Forests, Inc., (Dierks), for use in the latter's insulation board manufacturing plant located near Broken Bow, Oklahoma. On July 5, 1960, the Commission issued an order authorizing Applicant to deliver to Dierks volumes of gas up to a maximum of 3,360 Mcf per day. The requirements of Dierks are now 4,740 Mcf per day.

All gas to be delivered to Dierks by Applicant is on an interruptible basis.

The estimated cost of the facilities proposed is $183,620, which will be financed from working capital of Applicant.

The proposed pipeline, above described, will not only provide for increased deliveries of gas to Dierks, but will also strengthen the service to other customers of Applicant on the eastern segment of its Line E System.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G–442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission; and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity and the same is issued authorizing Applicant, Lone Star Gas Company, to construct and operate facilities and to deliver up to 4740 Mcf of natural gas per day to Dierks Forest Inc. all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby is granted on the express condition that the additional interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Lone Star Gas Company for firm resale service to its customers.

(D The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-32; THE OHIO FUEL GAS COMPANY, DOCKET NO. CP64-152

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 10, 1964)

On July 31, 1963, as amended on February 20 and April 30, 1964, Texas Gas Transmission Corporation (Texas Gas) filed in Docket No. CP64-32 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the sale and delivery of natural gas to three existing customers for resale, all as more fully set forth in the application and amendments.

The facilities for which authorization is sought herein consist of: (1) a sales meter station and two side valves located on Texas Gas' 26-inch main pipeline near its northern terminus at Middletown, Butler County, Ohio, to make delivery of natural gas to The Ohio Fuel Gas Company (Ohio Fuel) for resale to Cincinnati Gas & Electric Company (Cincinnati) for use in the latter's new gas-fired jet engine driven turbine generator station for electric peaking operations, and (2) two new side valves and appurtenances as additional delivery points to existing customers, one in Livingston County, Kentucky, to deliver an estimated additional 66,338 Mcf of natural gas annually to Western Kentucky Natural Gas Company (Western Kentucky) for resale in the community of Grand Rivers, Kentucky, and one in Orange County, Indiana, to deliver an estimated additional 3,500 Mcf of natural gas annually to Indiana Natural Gas Corporation (Indiana Natural) for resale to three rural house-heating customers and one industrial customer for grain drying operations.

The total estimated cost of the proposed facilities in (1) above is $43,175, of which $34,060 for the sales meter station will be reimbursed by Ohio Fuel to Texas Gas, and the total estimated cost of the proposed facilities in (2) above is $5,150.

All gas involved under the application in Docket No. CP64-32, as amended, will be sold under existing rate schedules and there will be no increase in existing contract demands.

On January 2, 1964, as amended on March 18, 1964, The Ohio Fuel Gas Company (Ohio Fuel) filed in Docket No. CP64-152 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the utilization of the delivery point in Butler County, Ohio, which Texas Gas requests authority to construct and operate in Docket No. CP64-32, and authorizing the delivery of additional quantities of natural gas to Cincinnati Gas & Electric Company at that point for the purpose, hereinbefore stated. Actual deliveries of gas will be made by Texas Gas to Cincinnati for the account of Ohio Fuel. No increase in Cincinnati's present contract demand of 80,000 Mcf per day from Ohio Fuel is requested.

Due notice of the subject applications has been given by publication in the Federal Register on July 15, 1964 (29 F.R. 9578). No petition to intervene, notice of intervention or protest to the granting of the applications has been received.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including

the applications, amendments and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G–859, *et al.* (8 FPC 228).

(2) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(3) The proposed construction and operation of facilities and sale and delivery of natural gas by Texas Gas, as hereinbefore described and as more fully described in the application and amendments in Docket No. CP64–32, and the proposed utilization of Texas Gas' delivery point for the delivery of additional natural gas for the account of Ohio Fuel as hereinbefore described and as more fully described in the application and amendment in Docket No. CP64–152, respectively, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas by Texas Gas, and the proposed delivery of additional natural gas for the account of Ohio Fuel are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates hereinafter issued to Texas Gas and Ohio Fuel and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Texas Gas Transmission Company authorizing the construction and operation of facilities and the sale and delivery of natural gas as hereinbefore described and as more fully described in the application and amendments in Docket No. CP64–32, and to The Ohio Fuel Gas Company for the utilization of the Butler County delivery point of Texas Gas and the delivery of natural gas as hereinbefore described and as more fully described in the application and amendment in Docket No. CP64–152, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the deliveries of natural gas commenced by Applicants, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. CP63-305

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 10, 1964)

On May 13, 1963, United Fuel Gas Company (Applicant) filed in Docket No. CP63-305 an application, first and second supplements thereto on August 19 and October 24, 1963, respectively, and a first amendment thereto on February 27, 1964, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, for permission and approval to abandon certain natural gas compressor facilities, and requesting the issuance of a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas transmission and measuring facilities and the sale and delivery of natural gas to an existing wholesale customer, all as more fully set forth in the application, supplements and amendment on file with the Commission.

Applicant proposed initially to abandon segments of 14 and 16-inch pipeline between the Town of Hurricane, Putnam County, West Virginia, and the Kanawha River, a segment of a 14-inch line between its Lanham Compressor Station in Kanawha County, its Lewis Compressor Station in Roane County, and a segment of 8-inch pipeline between its Storage Field X-4 and Hurricane, all in West Virginia, as well as its Lake Compressor Station in Putnam County, West Virginia. Due to Applicant's inability to obtain permission and approval of the West Virginia Public Service Commission to either transfer to Consumers Gas Utility Company its natural gas distribution facilities serving in part retail customers who would be affected by the proposed abandonment of segments of 14-inch and 16-inch lines east of Hurricane, West Virginia, or to abandon 19 retail services attached to Applicant's 14-inch pipeline between its Lanham and Lewis Compressor Stations. Applicant has withdrawn its request for approval of the abandonment of the foregoing facilities and now seeks abandonment only of its Lake Compressor Station, comprised of one 880 Hp compressor unit located in Putnam County, West Virginia.

Applicant further proposes to withdraw its request for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Consumers Gas Utility Company, and for the construction and operation of two measuring and regulating stations in Putnam County, West Virginia, for the sale and delivery of gas to Consumers.

At the present time Applicant proposes (a) to abandon its Lake Compressor Station, (b) to construct and operate 2.1 miles of 8-inch transmission line extending in a northerly direction from a point of interconnection of its existing facilities with those of Tennessee Gas Transmission Company, Putnam County, West Virginia, to its high pressure transmission system near the Town of Hurricane, Putnam County, West Virginia, and (c) to construct and operate a measuring station providing a substitute point of delivery to Union Oil & Gas, Inc., an existing wholesale customer situated in Putnam County, West Virginia, requesting a contract demand volume of 500 Mcf daily.

The sole purpose of the Applicant's Lake Station is to compress gas for injection into its Storage Pool X-4 during the latter part of its injection season. Applicant proposes to abandon the station and utilize pressure available from its high pressure system rather than continue operating the compressor station on a limited basis. Applicant states that Union Oil has requested the sub-

stitute point in view of low delivery pressures presently available at its existing delivery point on Applicant's gathering system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented and amended, has been filed.

At a hearing held on August 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application, supplements and amendment submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G–341 (4 FPC 534).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application, supplements and amendment filed in the proceeding are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities, and the transportation and sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, supplements and amendment filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, and the transportation and sale of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(8) It is appropriate in the administration of the Natural Gas Act and in the public interest that Applicant file a service agreement executed with Union Oil & Gas, Inc., reflecting the designation and location of the substitute point of delivery and the fixing of a contract demand of 500 Mcf per day.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application, supplements and amendment in this proceeding, are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities, and the transportation and sale of natural gas to Union Oil & Gas, Inc. of a volume not to exceed 500 Mcf daily, as hereinbefore

described, all as more fully described in the application, supplements and amendment thereto, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities hereby authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

(F) Applicant shall file a service agreement executed with Union Oil & Gas, Inc. reflecting the designation and location of the substitute point of delivery and the fixing of a contract demand of 500 Mcf per day.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NO. 2346

ORDER ISSUING LICENSE (MINOR)*

(Issued August 10, 1964)

Application was filed on March 1, 1963 by Wisconsin Power & Light Company (Applicant) of Madison, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2346, known as the Monterey Plant, located on Rock River, in the City of Janesville, Rock County, Wisconsin.

The project has been in operation for over 100 years. The present powerhouse, with an installed capacity of 430 horsepower, was constructed in 1926. For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of December 31, 1993, and an effective date of April 1, 1962.

The earliest commercial navigation on Rock River, following the exploration and furtrading periods, was associated with the development of the lead mines in Northwestern Illinois and Southwestern Wisconsin, during the period from about 1830 to 1850. Both the keel-boats and small steamboats of the time operated on Rock River to Janesville, Wisconsin, and in at least one instance, as far upstream therefrom as Jefferson, Wisconsin. The Rock River has been considered navigable from its mouth to Janesville.

The Secretary of the Army and the Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interests of fish and wildlife resources and recreation.

---

*Rehearing denied, 32 FPC 959.

The Department of Health, Education, and Welfare has advised that there have been no apparent water supply, water quality, or vector control problems created or intensified by the project, and none is anticipated.

The Commission finds:

(1) The Rock River from its mouth to at least Janesville is a navigable waterway of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a); 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 18, except insofar as it relates to fishways 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Wisconsin Power & Light Company (Licensee) of Madison, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2346, located on Rock River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2346 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A concrete overflow dam 375 feet long; a canal controlled by gates conveying water to a 51 x 34½ foot powerhouse containing two 160 kw units operating under a normal head of 9 feet; and all other structures, fixtures,

equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States", which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge:

(1) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $22.00.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

FORM L-9

(JULY 1, 1964)

TERMS AND CONDITIONS OF LICENSE FOR CONSTRUCTED MINOR PROJECT AFFECTING NAVIGABLE WATERS OF THE UNITED STATES*

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. Except when emergency shall require for the protection of life, health, or property, no substantial alteration or addition shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct.

Article 3. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Con-

*This Form L-9 may be used when the Commission waives certain provisions of the Federal Power Act pursuant to Section 10(i) of the Act.

struction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 4. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 5. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with navigation, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve

fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 8. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 9. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines to a condition satisfactory to the Commission's authorized representative and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 10. The right of the Licensee and of its transferees and successors to use or occupy navigable waters of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 11. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly waived in the license.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

DIXON MANAGEMENT CORP., ET AL., DOCKET NOS. RI64-768 AND RI64-769

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued August 11, 1964)

On June 25, 1964, Dixon Management Corp., *et al.* (Dixon) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Dixon. The offer relates to sales made under Supplement Nos. 4, 6 and 3 to Dixon's FPC Gas Rate Schedule Nos. 4, 5 and 13, respectively, in various fields in Texas R.R. Com. District No. 3. Each of the proposed increased rates were suspended by order of the Commission until November 21, 1964.

Under the terms of the offer, Dixon proposes to eliminate the favored-nation price redetermination and the periodic escalation provisions from the rate schedule and to establish a 15¢ per Mcf rate for the subject sales.[1] No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's *Statement of General Policy No. 61-1*, issued December

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

[1] Dixon's FPC Gas Rate Schedule Nos. 5 and 13 are subject to a dehydration charge by TGT of 0.21931¢ per Mcf.

20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Dixon's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Dixon's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Dixon on June 25, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Dixon on June 25, 1964, is hereby approved in accordance with the provisions of this order.

(B) Dixon shall file, within 30 days from the date of issuance of this order, notices of change in rates providing for the 15¢ per Mcf rate specified in its offer of settlement, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 4, 5 and 13 eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Dixon has complied with the terms and conditions of the order, the rates and charges of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order and the above designated proceedings shall be deemed terminated.

(D) The acceptance by the Commission of Dixon's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Dixon, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

KENNEBEC RIVER PULP & PAPER COMPANY, INC., PROJECT NO. 2365

ORDER ISSUING LICENSE (MAJOR)

(Issued August 11, 1964)

Application was filed on May 10, 1963 by Kennebec River Pulp & Paper Company, Inc. (Applicant) of New York, New York, for a license under Section 4(e) of the Federal Power Act (Act) for the constructed Anson Development, designated as Project No. 2365, located on the Kennebec River, in Somerset County, Maine, in the Towns of Anson and Madison.

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

According to the application, the project site was acquired in 1885 for the purpose of developing power to be used in making ground-wood, pulp and paper. From 1921 to 1923 the dam was rebuilt and the present powerhouse was constructed. In 1929 a fallen portion of the original masonry dam built in 1923 was, along with the rest of the dam extensively rebuilt with reinforced concrete extending the length of the whole dam's base and top. The three foot high flashboards were replaced by five foot boards. The only alterations thereafter were made after the 1936 flood when a dike and sluice for pulpwood floating were installed. Applicant acquired the project properties on July 13, 1959.

The Anson Development has a total installed capacity of 6,000 kilowatts. The energy generated by the project is used entirely in Applicant's pulp and paper mill.

In its order issued May 21, 1954 in Docket No. E-6456,[1] the Commission found the Kennebec River from its mouth at least up to Moosehead Lake constitutes navigable water of the United States. The Kennebec River has its source in Moosehead Lake.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation were considered satisfactory, and the plans of the project structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interests of fish and wildlife resources.

The Department of Health, Education, and Welfare, in reporting on the application, advised that neither the water supply nor water quality control is significantly affected by the project, and the granting of a license therefor is not expected to create or intensify vector problems.

Inasmuch as Applicant failed to file as a part of its application Exhibit K, a detailed map of the entire project area, we are hereinafter requiring such to be filed.

For the reasons set forth in our Opinion No. 357,[2] the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license May 1, 1954, the first day of the month in which we determined the Kennebec River to be a navigable water, as set forth above.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New York and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purpose of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

---

[1] 13 FPC 1076.

[2] New Hampshire Water Resources Board, Docket No. E-6807, 20 FPC 99-101.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 8,000 horsepower, and the amount of annual charges, based upon such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Kennebec River Pulp & Paper Company, Inc. (Licensee) of New York, New York, under Section 4(e) of the Federal Power Act (Act), for a period effective May 1, 1954 and terminating December 31, 1993, for the continued operation and maintenance of the Anson Development constituting Project No. 2365, located on the Kennebec River, a navigable water of the United States, in Somerset County, Maine, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of the license, and subject to such rules and regulations as the Commission has issued or prescribed thereunder.

(B) Constructed Project No. 2365 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibit which formed part of the application for license and which is designated and described as follows:

Exhibit J: Sheet 1 (FPC No. 2365-2) General Map Showing the Entire Project Area.

(ii) Project works consisting of:

A concrete gravity type dam approximately 38 feet high and with an overall length of about 630 feet topped with 5-foot flashboards (except for a 50-foot section) and having a crest elevation of 241.67 feet (U.S.C. & G.S.); a 14-foot long sluice; a 50-foot waste gate section near the powerhouse; a powerhouse integral with the dam equipped with five turbines rated 1,500 hp each, connected to five generators with a total installed capacity of 6,000 kw; and appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2365-3) entitled, "Detail Map Showing the Project Dam and Powerhouse"

Sheet 2 (FPC No. 2365-4) entitled, "Power Plant, Pain-Section-Elevation"

Exhibit M entitled, "Exhibit M, Equipment", consisting of one typewritten page, filed in the Commission May 10, 1963.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 8,000 horsepower.

Article 30. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 31. The Licensee shall within one year from the date of issuance of this license, file with the Commission a detail map, Exhibit K.

Article 32. The Licensee shall, within one year from the date of issuance of this license, file with the Commission for approval a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

POTOMAC LIGHT & POWER COMPANY, PROJECT NO. 2343

ORDER ISSUING LICENSE (MAJOR)

(Issued August 11, 1964)

Application was filed on February 27, 1963, by Potomac Light & Power Company (Applicant) of Martinsburg, West Virginia, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2343, known as the Millville Hydro Station, located on the Shenandoah River, in Jefferson County, West Virginia, near the Town of Millville.

According to the application, the original dam, headgate, headrace, powerhouse and various generating equipment, were constructed in 1905. Several changes in the generating equipment were made thereafter until 1937 in which year a fire caused considerable damage to the project. In 1938 the powerhouse was rebuilt, utilizing only an 840 kilowatt vertically driven generator and its 1,126 horsepower turbine of the then existing equipment. A new 1,000 kilowatt vertically driven generator with a 1,500 horsepower water wheel was installed in 1938. In 1939 an additional 1,000 kilowatt vertically driven generator with a 1,495 horsepower water wheel was installed. These changes in the generating equipment were made with minor modifications to the powerhouse.

The Millville Project has 3 turbines with a total installed rated capacity of 4,121 horsepower connected to 3 generators having a total rated capacity of 2,840 kilowatts. The energy generated by the project is delivered to Applicant's distribution system for public utility purposes.

Millville Hydro Station is located on the Shenandoah River 5.6 miles above its mouth and just below Little's Falls located about 6.5 miles above its mouth. The Potomac Co., organized under the leadership of George Washington, attempted the improvement of the Shenandoah River by the removal of obstructions to a point 60 miles above its mouth and the construction of locks and canals at the principal falls and rapids in that section. The works were put in operation in 1807 and boats, described as being 8 by 60 feet, having a draft of 18 inches, navigated this section of the river.[1] The value of the freight brought down the river was large, considerable tolls were collected, and the artificial works were kept in a fair condition. The upstream commerce on the

---

[1] House Document No. 101, 73rd Cong. 1st Sess., 1934, p. 40.

river, as far up as Little's Falls, was small, navigation being difficult because of its steepness.[3]

A U.S. Army report on the Potomac River and its tributaries,[3] recommends the construction of a dam on the Shenandoah River downstream from the Millville Project site. The dam would be about 193 feet high to elevation 495 feet (U.S.G.S.) creating a reservoir with 600,000 acre feet of usable storage which would inundate the Millville Project. The Corps' proposed project would have an installed capacity of 60,000 kilowatts and would generate an estimated 247,000,000 kwh annually. The latest report on the Potomac River Basin[4] shows the proposed project near the Millville Project as a future power and storage development. The report recommends the construction of the Brocks Gap and Staunton projects on the North and Middle Forks of the Shenandoah River, respectively. Development of these sites would provide about 230,000 acre feet of storage to regulate river flows for municipal purposes. Construction of either or both of these storage projects would enhance power development of the Millville site by providing a better regulated flow. Provision is hereinafter made in the interest of a more comprehensive development of the Shenandoah River.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation were considered satisfactory; that special terms and conditions in the interest of navigation were not considered necessary; and that the plans of the project structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife.

The Department of Health, Education and Welfare, in reporting on the application, advised that the project does not significantly affect water supply or water quality control, nor is it expected that the granting of a license for the project will create or intensify vector problems.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1938 and a termination date of December 31, 1987, since neither a declaration of intention nor a timely application for license was filed with respect to the aforesaid construction in 1938 and 1939.

The Commission finds:

(1) The Shenandoah River from its confluence with the Potomac River to at least Little's Falls located upstream from the Millville Project is a navigable waterway of the United States.

(2) The Shenandoah River is a stream over which Congress has jurisdiction under its authority to regulate interstate and foreign commerce.

(3) The project does not affect lands of the United States.

(4) Applicant is a corporation organized under the laws of the State of West Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(5) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

[3] "Examination of Shenandoah River, Va. and West Va.", Annual Report of the Chief of Engineers, 1880, Part I, P. 665.

[3] House Document No. 622, 79th Cong. 2d Sess., 1946.

[4] U.S. Army Engineer District, Baltimore (February 1963).

(6) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(7) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(8) The non-automatic oil circuit breaker, the 2,400 volt bus, and the 2.4/34.5 kv power transformer, which were included in the application for license and which are in general terms referred to in paragraph (B) below, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(9) The 2.4 kv and 34.5 kv transmission lines from the Millville Project to Applicant's old Millville steam station, together with the 2.4/34.5 kv step-up substation, the generator leads, and all appurtenant facilities which were not included in the application for license, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license as hereinafter provided.

(10) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 3,800 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(11) The exhibits designated and described in paragraph (B) below, which were included in the application for license, conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Potomac Light & Power Company (Licensee) of Martinsburg, West Virginia, under Section 4(e) of the Federal Power Act for a period effective January 1, 1938 and terminating December 31, 1987, for the continued operation and maintenance of Project No. 2343, located on the Shenandoah River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2343 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J, 2 sheets (FPC Nos. 2343-1 and -2). Sheet 1—General Highway Map of Jefferson County, West Virginia. Sheet 2—Map of Electric Properties.

Exhibit K, 1 sheet (FPC No. 2343-3) Map of Project Area.

(ii) The project, which is constructed and known as the Millville Hydro Station, consists of an 800 foot gravity dam 15 feet in height; a 30 foot wide by 12 foot deep head race—1,600 feet in length—located along the west bank of the river; a 37 foot by 78 foot concrete and brick powerhouse containing 3 vertically driven generators rated at a total capacity of 2,840 kw; a substation and switch-

yard for distribution of power generated at the plant; and appurtenant electrical and mechanical facilities which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed a part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings Sheet 1 (FPC No. 2343–4) entitled, "Potomac Light & Power Company, Millville Hydro Station, Millville, West Virginia, Floor Plan"

Sheet 2 (FPC No. 2343–5) entitled, "Potomac Light & Power Company, Millville Hydro Station, Millville, West Virginia, Elevations and Sections".

Exhibit M: Two typewritten pages, entitled, "Exhibit M, Millville Hydro Station", filed with the Commission February 27, 1963.

(iii) All other structures, fixtures, equipment or facilities useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special condition set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Com-

mission, in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 3,800 horsepower.

Article 30. The Licensee shall within one year from the date of issuance of this license, file with the Commission an application for amendment of this license to include the following transmission facilities:

(i) The 2.4 kv transmission line from the Millville Hydro Plant to the old Millville Steam Plant.

(ii) The 34.5 kv transmission line from the Millville Hydro Plant to the old Millville Steam Plant.

(iii) At the Millville Hydro Plant the generator leads and appurtenant facilities.

Article 31. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 32. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation and maintenance of hydroelectric project which will more completely utilize the water resources of the reach of the Shenandoah River in which the project is located.

Article 33. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States, or the person or persons hereinafter constructing, operating and maintaining such more complete water resource project or his or their successors and assigns that said Licensee, its successors or assigns, shall surrender its license at such time as the project becomes inoperative by reason of inundation by such more complete hydroelectric project; provided, that Licensee shall be paid the net investment in Project No. 2343 upon surrender of its license; and provided further that Licensee shall not be entitled to any compensation for severance damages sustained by reason of inundation or destruction of the project or project works of Project No. 2343.

Article 34. The Licensee shall commence construction to raise the headworks section within one year of the date of acknowledgment of acceptance of this license, shall thereafter in good faith and with due diligence prosecute such construction and shall complete construction of such project works within two years from the effective date of this license.

Article 35. Licensee shall design, and maintain the flashboard system on the dam in such manner that it shall fail when subjected to a load equivalent to 2 feet of surcharge or less.

Article 36. Whenever the licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States or a storage reservoir or other headwater improvements, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60

days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

PUBLIC UTILITY DISTRICT NO. 1 OF SNOHOMISH COUNTY, WASHINGTON AND CITY OF EVERETT, WASHINGTON, PROJECT NO. 2157

ORDER APPROVING REVISED EXHIBIT L DRAWINGS

(Issued August 11, 1964)

On April 24, 1964, Public Utility District No. 1 of Snohomish County, Washington, and City of Everett, Washington, licensees for Project No. 2157, filed a joint application for Commission approval of revised Exhibit L drawings for the first stage of construction of Dam No. 1.

The drawings reflect proposed changes in the design of the first stage of Dam No. 1, now under construction. The revisions consists of: (1) an increase in the elevation of the crest from elevation 1402 feet to 1408 feet; and (2) redesign of the spillway outlet portal structure. In addition, the downstream slope of first stage construction has been changed from 1.5:1 to 1.8:1.

Only that part of the full section of the dam required for structural safety and stability of the first stage dam will be constructed now. Construction of the incremental fill to the full section of the dam will be accomplished during second stage construction. The increase in height is being provided in order that the design flood may be passed safely with adequate freeboard. Hydraulic model studies of the morning glory spillway had disclosed a lower discharge capacity than calculated in earlier analysis. Foundation conditions necessitated and subsequent model studies resulted in a change in the design of the spillway outlet portal to that shown on revised Exhibit L.

The Commission finds:

The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for Project No. 2157, and the exhibits described herein as being superseded should be eliminated from the license:

Exhibit L Sheet 17A (FPC No. 2157–51) Entitled "Dam No. 1 First Stage Plan" superseding Sheet 17 (FPC No. 2157–44);

Sheet 19A (FPC No. 2157 –52) Entitled "Dam No. 1 First & Second Stages Sections", superseding Sheet 19 (FPC No. 2157–46).

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

The Commission orders:

The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2157 and the Exhibit L drawings described in the same finding as being superseded are eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. RP64-34

ORDER AMENDING ORDER PERMITTING REVISED TARIFF SHEETS TO BECOME EFFECTIVE AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued August 11, 1964)

The Commission, by order issued May 19, 1964, 31 FPC 1273, permitted certain revised tariff sheets to become effective, which had been filed by South Georgia Natural Gas Company (South Georgia) on April 13, 1964. The Commission also approved South Georgia's accompanying proposal to make certain further reductions in its rates. By letter filed June 17, 1964, South Georgia called attention to the fact that its agreement to further reduce its rates was, in part, incorrectly expressed in our order.

South Georgia states that paragraphs (4) and (7) of the summary of South Georgia's agreement incorrectly describe the $11,749 reduction in rates to be made on January 1, 1965, as relating only to the reduction in South Georgia's Federal income taxes which will take effect on that date. In fact, however, the $11,749 also includes the reduction in South Georgia's purchase gas cost on January 1, 1965, resulting from a similar reduction in its supplier's (Southern Natural Gas Company) income taxes. South Georgia has submitted its computations in support of the $11,749 rate reduction and they have been found to be correct. South Georgia, accordingly, requests that our order be modified to properly reflect the amount and nature of the reduction to be made on January 1, 1965.

The Commission orders:

The Commission's order issued herein on May 19, 1964, is hereby amended so as to correctly describe South Georgia's rate reduction agreement to state that the $11,749 rate reduction to be made on January 1, 1965, encompasses both the reduction in South Georgia's Federal income taxes as of that date as well as the reduction in cost of gas purchased from Southern Natural Gas Company resulting from the reduction in Federal income taxes paid by the latter company.

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

APPALACHIAN POWER COMPANY, PROJECT NO. 2376

ORDER ISSUING LICENSE (MAJOR)

(Issued August 12, 1964)

Application was filed on May 31, 1963 by Appalachian Power Company (Applicant), of Roanoke, Virginia, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2376, known as the Reusens Project, located on the James River in Amherst, Bedford and Campbell Counties, Virginia.

According to the application, the project was reconstructed in its present form in 1930 and 1931. There has been no project construction since.

The installed generating capacity of the project is 12,500 kilowatts.

The Reusens Project is located on the James River at mile 255.5 near Lynchville, Virginia. According to available records, navigation improvements of the James River, which began under a charter issued in 1785, were accomplished for the most part by opening and enlarging sluices from Richmond to Crow's Ferry, at mile 302, a distance of 197 miles. There are recorded instances of navigation in this stretch as far back as 1726. By 1808 planters were transporting their products downstream and returning with supplies to points upstream beyond the Reusens Project. The James River has been used for transportation by water from its mouth to points at least as far upstream as the mouth of Jackson's River at about mile 340 on the James River.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation were satisfactory.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interest of fish and wildlife resources in the area involved.

The Department of Health, Education, and Welfare, in reporting on the application, advised that the licensing of the project is not expected to affect vector control in the area involved. No special recommendations were made.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The James River from its mouth at Newport News at least to its confluence with Jackson's River at about mile 340 is a navigable waterway of the United States.

(2) The project does not affect lands of the United States.

(3) Applicant is a corporation organized under the laws of West Virginia, is qualified to do business in West Virginia and Tennessee, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given as required by the Act. No protest or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 16,700 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) The generator leads, the three 4/34.5 kv step-up transformers, the short 34.5 kv line from the transformers to the main bus structure in the powerhouse, and appurtenant facilities, mentioned or referred to in paragraph (B) below, and which were included in the application, are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(9) The exhibits designated and described in paragraph (B) below, which were included in the application for license, conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Appalachian Power Company (Licensee) of Roanoke, Virginia, under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of Reusens Project No. 2376, located on the James River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed thereunder.

(B) Constructed Project No. 2376 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license.

Exhibit J and K: (FPC No. 2376–1) Project Area and Boundary Map.

(ii) Project works consisting of: (1) a concrete and masonry gravity dam composed of an eight-bay gated spillway section about 416 feet long; (2) two integral intake and powerhouse sections, one about 105 feet long and 86 feet high containing three hydroelectric units of 2,500 kw each, another about 55 feet long and 84 feet high containing two hydroelectric units of 2,500 kw each, separated by a curved spillway section about 126 feet in arc length, topped by flashboards 7.3 feet high; (3) a pond about 7 miles long; (4) three 4/34.5 kv transformers and related switching equipment; and (5) appurtenant electrical and mechanical facilities; the location, nature, and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: (FPC No. 2376–2) General Design Drawing

Exhibit L (Amended): General Design Drawings

Sheet 1 of 4 (FPC No. 2376–3)

Sheet 2 of 4 (FPC No. 2376–4)

Sheet 3 of 4 (FPC No. 2376–5)
Sheet 4 of 4 (FPC No. 2376–6)

Exhibit M: (Revised July 1, 1963) Three typewritten pages entitled, "General Description of Equipment".

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (30 FPC 1658) which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 16,700 horsepower.

Article 29. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 30. The Licensee shall within one year from the date of issuance of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

DUKE POWER COMPANY, DOCKET NO. E-7122

ORDER ACCEPTING RATE SCHEDULES FOR FILING AND TERMINATING CERTAIN ISSUES OF ORDER TO SHOW CAUSE

(Issued August 12, 1964)

On August 21, 1963, 30 FPC 524, the Commission issued an order in this docket directing Duke Power Company (Duke) to show cause why certain provisions in its wholesale contracts are not unduly restritive and therefore unlawful. These provisions include: kilowatt limitations on the loads to which power may be resold by a customer and possible restrictions on uses to which power could ultimately be put by municipal and some privately-owned customers; territorial restrictions in its contracts with rural electric cooperative customers; and a resale limitation of 5 horsepower in its contract with the City of High Point, North Carolina. Following discussions with the Commission staff and other interested persons, Duke has submitted rate schedule supplements which have the effect of eliminating restrictions on its municipal and privately-owned customers. Duke advises that it is actively seeking to eliminate possible restrictions in its contracts with rural electric cooperatives and the City of High Point.

On May 22, 1964, Duke, of Charlotte, North Carolina, submitted for filing with the Commission, pursuant to Section 205 of the Federal Power Act, supplements to its rate schedules for service to 38 wholesale for resale customers. The submittals amend Article Fourth of Duke's Standard Schedule No. 10, Class

1, Municipal Resale Service, to delete therefrom the words "for lighting, heating and motive power". In addition, the proposed supplements are submitted for filing as a "practice", setting forth Duke's undertaking to delete from any contract at the request of the customer concerned a clause in Article Fourth which states: ". . . none of said power to be resold to any one customer in excess of ——— kilowatts." The Company also agrees to adjust upward or downward the kilowatt limitation at the customer's request. The customers and the designations of the proposed supplements are listed in Appendix A attached hereto.

These provisions of Standard Schedule No. 10, Class 1, are among those included in the Commission's Order to Show Cause why certain provisions in Duke's wholesale for resale rate schedules are not unduly restrictive, issued August 21, 1963, in this docket. The rate schedule designations of customers whose rate schedules contain the provisions amended by the proposed supplements are listed in Appendix A to the August 21, 1963 order.

The submittals were made following discussions with Commission staff and other interested participants concerning this docket. Duke agreed to delete the clause "for lighting, heating, and motive power" to make clear that these words were not intended as a limitation on the use to which power purchased from Duke could ultimately be put. Duke has stated that the kilowatt limitation was requested by several of its customers, and filed its statement of "practice" to show that it will delete or adjust this limitation in any contract at the customer's request.

The deletion of the clause "for lighting, heating, and motive power" from these rate schedules eliminates any question that these words may be interpreted as a restriction on uses to which the power may be put. The "practice" filed by Duke indicates that Duke will not enforce the kilowatt limitation to the detriment of any customer, by its agreement to delete or adjust that limitation at the customer's request.

The Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act that the rate schedule supplements listed in Appendix A attached hereto be accepted for filing effective June 22, 1964.

(2) It is necessary and appropriate for purposes of the Federal Power Act that the issues raised in the Commission's Order to Show Cause issued August 21, 1963 in this docket, with respect to restrictions in Duke's Standard Schedule No. 10, Class 1, Municipal Resale Service, for customers listed in Appendix A to that Order, be severed from this docket and terminated.

The Commission orders:

(A) The proffered rate schedule supplements referred to in finding (1) above are accepted for filing effective June 22, 1964.

(B) The issues raised in the Commission's Order to Show Cause issued August 21, 1963 in this docket, with respect to restrictions in Duke's Standard Schedule No. 10, Class 1, Municipal Resale Service, for customers listed in Appendix A to that order, are hereby severed from this docket and terminated.

(C) Nothing contained in this order shall be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such service or rate provided for in the rate schedules as above designated, nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate.

(D) This order is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted, by or against the aforementioned company.

ECONOMIC DEVELOPMENT CORPORATION OF AUGUSTA, MAINE, AND BATES MANUFACTURING COMPANY, PROJECT NO. 2389

ORDER ISSUING LICENSE (MAJOR) AND APPROVING LEASE OF PROJECT PROPERTY

(Issued August 12, 1964)

Application was filed on July 16, 1963 by Bates Manufacturing Company of Lewiston, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2389, known as the Edwards Project, located on the Kennebec River, in Kennebec County, in and near the City of Augusta, Maine.

According to the application, the project was constructed by the Kennebec Dam Company in 1836 and 1837 and was acquired by Bates on December 17, 1945. The dam was reconstructed in 1870 after a portion of the dam was washed out. There has been no new project construction since 1935.

The Edwards Project has nine generating units with a total rated capacity of 3,500 kilowatts. The energy generated by the project is used in operating Bates' textile machinery in the immediate vicinity and surplus power is sometimes absorbed by Central Maine Power Company.

On July 1, 1964, Bates Manufacturing Company (Bates) and Economic Development Corporation of Augusta (Economic) filed a joint application for amendment of the aforementioned July 16, 1963 application and application for approval of a lease. The July 1, 1964 filing seeks: (1) to substitute Economic as applicant for license for the Edwards Project; (2) Commission approval of a lease of the Edwards Project from Economic to Bates; and (3) requests the Commission to set forth in any license for the project the circumstances surrounding a sale and leaseback and the financing thereof.

According to the July 1, 1964 filing, by deed dated June 1, 1964, Economic acquired from Bates all real estate and rights and interests therein, together with buildings thereon, including all generating and hydroelectric equipment and associated facilities owned by Bates within Kennebec County, Maine, and all lands and rights to the Edwards Project. Subsequent to its acquisition of said property, but also on June 1, 1964, Economic mortgaged the Edwards Project and certain other of said real estate acquired from Bates to Central Maine Power Company to secure a loan of $225,000 to Economic by the mortgagee. Also on June 1, 1964, Economic gave a first mortgage on the remaining real estate to First National Granite Bank of Augusta to secure a loan of $140,000 and a second mortgage of $40,000 to Depositors Trust Company, Augusta, Maine, to secure a loan of $40,000. The latter two mortgages are not on property encompassing any part of the Edwards Project.

The aforementioned lease of the Edwards Project from Economic to Bates is for a period of three years with options for its renewal for periods not to extend beyond May 31, 1977. Again, according to the July 1, 1964 filing, during the term of the lease, Bates expects to use and operate the Edwards Project in connection with its textile mill in manner substantially as in the past.

In the above circumstances, we are hereinafter referring to Economic Development Corporation of Augusta as Applicant or Licensee and Bates Manufacturing Company as Lessee.

* This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

In its order issued May 21, 1954,[1] the Commission found that the Kennebec River from its mouth at least up to Moosehead Lake[2] constitutes navigable waters of the United States within the meaning of Section 3(8) of the Federal Power Act. The basis for this finding was that the Kennebec River has been used extensively for the transportation of substantial quantities of sawlogs for a long period of time, beginning in the early 1800's and has been navigated by canoes, bateaux and steamboats.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license May 1, 1954, the first day of the month in which we determined the Kennebec River to be a navigable water, as set forth above.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation are satisfactory, and that the plans of the project structures affecting navigation have been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife.

The Department of Health, Education, and Welfare, in reporting on the application, advised that the project does not constitute a source of pollution, and that removal of the dam or flow regulation is not warranted at this time. The Department does not foresee that the granting of a license for the project will increase or intensify vector problems.

The Commission finds:

(1) Applicant and Lessee are corporations organized under the laws of the State of Maine and have submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purpose of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(3) The issuance of a license for the project as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 4,700 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) The generator leads from the nine generators to the main switchboard in the No. 2 Mill Annex, mentioned in paragraph (B) below are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

---

[1] Central Maine Power Company, Docket No. E-6456 (13 FPC 1076).

[2] Moosehead Lake is the source of Kennebec River.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

(8) In the circumstances, approval of the lease of the project properties from Economic Development Corporation of Augusta to Bates Manufacturing Company, as hereinafter provided, is in the public interest.

The Commission orders:

(A) This license is hereby issued to Economic Development Corporation of Augusta (Licensee), Augusta, Maine, under Section 4(e) of the Federal Power Act (Act) for a period effective as of May 1, 1954, and terminating December 31, 1993, for the continued operation and maintenance of the Edwards Project No. 2389, located on the Kennebec River, a navigable water of the United States, in Kennebec County, Maine, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2389 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the licensee or by the United States; such project area and project boundary being more generally shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2389–1) General Map of Project Area.

Exhibit K: (FPC No. 2389–2) Detail Map of Project Area.

(ii) All principal project works constituting what is known as the Edwards Project which is constructed and includes a rock-filled timber crib dam located at the head of tide on Kennebec River; a reservoir with normal full pond at approximately 24.0 feet MSL extending 17 miles to the mouth of the Sebasticook River; a canal 450 feet long; a 13-foot diameter penstock 240 feet long leading to a forebay and a 9-foot diameter penstock 200 feet long leading to No. 8 Generator; three buildings housing a total of nine vertical units which have an aggregate capacity of 3,500 kw; the generator leads from the nine generators to the main switchboard in the No. 2 Mill Annex; and appurtenant facilities; the location, nature and character of which are more specifically shown and described by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 of 6 (FPC No. 2389–3) Plan and Sections of Canal System—Plan and Elevations of Gate House.

Sheet 2 of 6 (FPC No. 2389–4) Plan and Cross Sections of Dam.

Sheet 3 of 6 (FPC No. 2389–5) Floor Plan of Wheelhouse No. 4.

Sheet 4 of 6 (FPC No. 2389–6) Floor Plan of Units 7 and 8.

Sheet 5 of 6 (FPC No. 2389–7) Cross Sections thru Hydro Units.

Sheet 6 of 6 (FPC No. 2389–8) Schematic Layout of Electrical Ties.

Exhibit M: Six sheets entitled "General Description and Specifications of Equipment and Appurtenances" filed in the Commission July 16, 1963.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if

and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (30 FPC 1658), which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof except for Article 4 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 29. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission, in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 4,700 horsepower.

Article 30. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 31. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage

reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determination pursuant to the then current Commission regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) The lease of the project properties comprising Project No. 2389 from Economic Development Corporation of Augusta to Bates Manufacturing Company is hereby approved, effective as of June 1, 1964, subject in general to the provisions of Part 9 of the Commission's Regulations under the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL COST OF PROJECT; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued August 12, 1964)

Idaho Power Company, Licensee for the Brownlee development of Project No. 1971[1] on December 27, 1960, filed its initial statement pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the Brownlee development, as of May 31, 1960, an actual legitimate original cost of $89,313,416.90,[2] as more specifically shown in the attached schedule.

The Commission's staff made a field examination of the books, records and other data of Licensee for the purpose of ascertaining the correctness of the claimed cost of Brownlee development as of May 31, 1960.

Following that examination, an agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain proposed adjustments involving (1) the reclassification of a total of $188,826.60 within the development's plant accounts; (2) the elimination of a net amount of $18,209.81 from the claimed cost of Brownlee development as of May 31, 1960; and (3) the accounting disposition of all amounts involved in the proposed adjustments.

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

[1] Brownlee development is one of three developments (Oxbow, Hells Canyon, Brownlee) licensed as Project No. 1971, which is located on the Snake River, a navigable water of the United States, in Adams and Washington Counties, Idaho, and in Wallowa, Baker, and Malheur Counties, Oregon. The license (issued pursuant to Section 4(e) of the Federal Power Act) authorizing the construction, operation, and maintenance of the project is by its terms effective for a period of 50 years, commencing August 1, 1955.

[2] Article 23 of the license provides for Commission determination of the actual legitimate original cost of the project, and of any addition thereto or betterment thereof.

The accounting for the proposed reclassifications within the development's plant accounts, which do not affect the total claimed net development cost, is shown by the following composite journal entry:

Account No. [1]		Debit	Credit
61	Temporary Construction Facilities, Hydraulic Production Plant	$60,000.00	
321	Structures and Improvements, Hydraulic Production Plant	8,723.07	
322	Reservoirs, Dams and Waterways, Common Plant	114,491.27	
320	Land and Land Rights, Hydraulic Production Plant	5,612.26	
320	Land and Land Rights, Common Plant		$188,826.60

[1] Account references in this order and the attached schedule are to account numbers and titles prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees, effective prior to January 1, 1961, except in the adjusting journal entry, which employs account numbers and titles prescribed in the Commission's Uniform System of Accounts effective January 1, 1961. This reflects the fact that items of project cost were entered upon Licensee's books of account prior to January 1, 1961.

The proposed elimination of the net amount of $18,209.81 from the claimed cost of the development as of May 31, 1960, consists of the following items:

Recorded cost not claimed	$549.20
Interest and taxes during construction	(18,759.01)
	($18,209.81)

The proposed accounting to establish in Licensee's records the recommended cost of Brownlee development of Project No. 1971 as of May 31, 1960, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, as tentatively agreed to between the staff and Licensee's representatives is shown by the following composite journal entry:

Account No.	Title	Debit	Credit
101	Electric Plant in Service, Project No. 1971 (Brownlee)		$18,759.01
216	Unappropriated Earned Surplus	$18,759.01	

After giving effect to the above adjustments, the staff recommends and Licensee, by letter dated February 22, 1963, concurs that the Commission determine the actual legitimate original cost of the Brownlee development of Project No. 1971, as of May 31, 1960, to be $89,295,207.00, as more specifically set forth in the attached schedule.

The Idaho Public Utilities Commission and the Public Utility Commissioner of Oregon where separately advised by letter of the Commission's Regional Accountant dated February 28, 1963, of the claimed cost of Brownlee Development of Project No. 1971 as of May 31, 1960, and the staff's proposed adjustments relative thereto, all as described above. The Idaho Public Utilities Commission, by letter dated March 15, 1963, and the Public Utility Commissioner of Oregon, by letter dated March 27, 1963, indicated no objection to the foregoing.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions and resulting project costs, and its letter dated February 22, 1963, the Idaho Public Utilities Commission, by its letter dated March 15, 1963, and the Public Utility Commissioner of Oregon, by his letter

dated March 27, 1963, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost of the Brownlee development of Project No. 1971 as of May 31, 1960, is $89,295,207.09, classified by primary plant accounts as shown in the attached schedule.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Brownlee development of Project No. 1971, showing the debit balance of $89,295,207.09 as the actual legitimate original cost of that development as of May 31, 1960 as more specifically shown in the attached schedule classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall file with the Commission, within 90 days from the issuance of this order, FPC Form No. 7 showing compliance therewith. Two conformed copies of FPC Form No. 7 are to be sent to the Regional Accountant, Federal Power Commission, San Francisco, California.

SCHEDULE

PROJECT NO. 1971 (BROWNLEE DEVELOPMENT)

IDAHO POWER COMPANY

Summary by Detailed Plant Accounts of Claimed Initial Cost With Staff Proposed Adjustments Thereto and Balances Allowed as of May 31, 1960

Account		As claimed	Adjustments	Allowed	
No.	Title			Before distribution	After distribution
	Intangible Plant				
302	Franchises and Consents	$220,856.28		$228,856.28	$241,397.90
	Hydraulic Production Plant

NATURAL GAS PIPELINE COMPANIES—BUDGET-TYPE CERTIFICATE APPLICATIONS FOR GAS-SALES TRANSPORTATION AND UNDERGROUND GAS STORAGE FACILITIES, DOCKET NO. R-254

ORDER NO. 285

AMENDING SECTION 157.7 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued August 12, 1964)*

The Federal Power Commission, by notice issued December 24, 1963 (29 F.R. 22, January 1, 1964), proposed to amend its Regulations Under the Natural Gas Act to permit the use by natural gas pipeline companies of budget-type applications for certificates of public convenience and necessity authorizing the construction of gas-sales facilities pursuant to section 7 of the Natural Gas Act.

In response to the invitation in our notice, comments were received from seventeen pipeline companies, five distributors, two state commissions and an association representing the coal interests. Most of the comments were generally favorable and suggested various modifications, many of which we are adopting.

Two suggestions of some significance, however, are not being adopted. There were several suggestions to increase the allowable total investment from the $300,000 proposed to as much as $500,000. We are of the opinion, however, that the lower limit is appropriate for the minor type of facilities intended to be covered in budget-type applications, and that if higher amounts are contemplated a request for waiver of the limit detailing the reasons therefor shall be submitted. As we secure greater experience with this new type of budget proceeding we shall, of course, reevaluate the dollar limit.

We do not adopt the suggestions that the rule be made applicable to applications proposing to serve existing distributor customers for initial service in communities not having gas service. The possibility of controversy between distributors proposing new service to such a community makes such a suggestion unwise.

We are adopting several suggestions—some to broaden and others to clarify the rule. We are broadening the rule to permit budget applications to cover direct sales to schools and hospitals in rural areas and to provide for the construction and operation of all facilities necessary to make the sales permitted herein. (157.7(c)(1)(ii)). To avoid any ambiguity as to service to existing customers of distributors, a budget-type application may not be utilized to make an industrial sale to a customer of a distributor without the written consent of the distributor. (157.7(c)(7)(ii)).

Finally, we are adding another paragraph to permit the use of budget-type applications for certificates authorizing facilities for the testing and development of underground reservoirs for the possible storage of gas (§ 157.7(d)). This amendment was not included in the notice of proposed rulemaking issued in this proceeding but we believe that underground storage projects should be encouraged and the new paragraph should have such a desirable effect. The amendment, similar in purpose to the one which was proposed, is, in reality, a relaxation of the rules relating in general to applications for certificates of public convenience and necessity and will in our opinion be welcomed by the industry, the distributors and state commissions alike.

*Published in the Federal Register on August 18, 1964 (29 F.R. 11749).

Upon consideration of the record in this proceeding, the *Commission further finds:*

(1) Adoption of these amendments to the Regulations Under the Natural Gas Act are necessary and appropriate to the administration of the Natural Gas Act.

(2) For the reasons heretofore expressed, good cause exists for the adoption herein of the amendment to § 157.7 embodied in the new paragraph (d) thereof without giving the prior notice provided for by section 4 of the Administrative Procedure Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7, 15, and 16 thereof (52 Stat. 824, 829, 830; 56 Stat. 83, 84; 15 U.S.C. 717f, 717n, 717o), *orders:*

(A) Section 157.7, Subchapter E, Chapter I, Title 18 of the Code of Federal Regulations, as amended by Order No. 280, is amended by adding new paragraphs (c) and (d) to read as follows:

"§ 157.7 Abbreviated applications.

* * * * * * *

(c) *Gas-sales or transportation facilities—budget-type application.* An abbreviated application requesting a budget-type certificate authorizing the construction during a given twelve-month period, and operation of gas-sales or transportation facilities may be filed when:

(1) The facilities proposed in the application are to be used for any of the following purposes:

(i) the transportation and sale of volumes of natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with this Commission, for resale in existing market areas, if such distributors have obtained all requisite local and state authorization. An abbreviated application may not be filed pursuant to this section if the distributor is to be required to make a contribution to the applicant for the cost of construction of the facilities or if the distributor is served or is proposed to be served by more than one natural gas company;

(ii) direct sales of natural gas to consumers who will use the gas solely for one or more of the following purposes: road building, irrigation, agriculture, general use in schools and hospitals located in areas outside of local distributors' franchise areas, and seasonal industrial purposes (*e.g.* alfalfa dehydration, canning);

(iii) miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, *e.g.*, changes in existing field operations or relocation of existing sales or transportation facilities when required by highway construction, dam construction or other similar reasons.

(2) The deliveries to any one distributor or consumer through the facilities to be installed will not exceed 100,000 Mcf annually and will not be used by the distributor or consumer for boiler fuel purposes.

(3) (i) The total estimated cost of the gas-sales or transportation facilities proposed in the application does not exceed $300,000 except where the applicant's gas plant (Account No. 101, Uniform System of Accounts Prescribed for Natural Gas Companies) is $10,000,000 or less, in which case the total estimated cost of the gas-sales facilities proposed in the application shall not exceed $100,000.

(ii) Any application proposing the construction of facilities having an estimated cost in excess of the amounts specified in subdivision (i) hereof shall be accompanied by a request for waiver of the provisions of such subdivision and will be granted only for good cause shown.

(4) The Application contains a statement showing the minimum rate, *i.e.*, price per Mcf, at which the applicant proposes to make direct industrial sales.

(5) The application contains a statement indicating the maximum facilities to be installed during the authorized construction period subdivided by type of project, *e.g.*, new delivery points for distributors, direct sales to ultimate consumers and miscellaneous rearrangements, and describing the maximum number of lateral or loop lines to be installed and their maximum length and diameter, the maximum number of taps and meters to be installed, and the estimated cost of facilities for each such type or project.

(6) The application also contains a statement describing and estimating the cost of the gas-sales facilities which, at the time of application, are contemplated to be built.

(7) The applicant agrees that any certificate issued pursuant to an application filed under this paragraph (c) shall be subject to the following conditions:

(i) Direct industrial deliveries to interruptible customers shall be subject to curtailment and interruption if the gas is required to meet the existing or future contract demands of applicant's customers for firm resale service.

(ii) No gas shall be delivered directly to a direct industrial customer to replace or supplement gas purchased by such customer from a distributor or other natural gas company without the written consent of such distributor or natural gas company, or to serve a new direct industrial customer in the franchise or service area of the distributor without the express consent of the distributor.

(8) The applicant agrees to file with the Commission, within sixty days after expiration of the authorized construction period, a statement showing for each individual project:

(i) Description of the gas-sales or transportation facilities installed, *e.g.*, miles and size of pipeline (including wall thickness and minimum yield point), taps, laterals, lateral loop lines, metering and regulating facilities.

(ii) Location of gas-sales or transportation facilities installed and new delivery points established.

(iii) Actual installed cost of gas-sales or transportation facilities subdivided by size of pipeline, taps, laterals, lateral loop lines, metering and regulating facilities, and appurtenant facilities.

(iv) Name of distributor or direct industrial consumer served.

(v) Estimated annual and peak-day deliveries and estimated annual revenues for each of the first 3 years of natural gas service, designating which service is under FPC rate schedules.

(vi) Ultimate use of the gas.

(9) "Boiler fuel purposes," as used herein, means the use of natural gas in boilers for the generation of steam for electric power generation. "Distributors" means persons, municipalities, and other public agencies engaged in the local distribution of natural gas to the public.

(d) *Underground gas storage facilities—budget-type application.* An abbreviated application requesting a budget-type certificate authorizing the construction and operation of natural gas pipeline and compression facilities for the testing and development of underground reservoirs for the possible storage of gas for a three-year period may be filed when:

(1) The volume of natural gas to be injected into the prospective storage fields does not exceed a total of 10,000,000 Mcf, with no more than 2,000,000 Mcf being injected into any single field.

(2) Gas will be injected for testing purposes only during off-peak periods.

(3) No storage field developed pursuant to this section will be utilized to render service without further authorization by the Commission; except that gas may be withdrawn on occasion for testing purposes.

(4) The total expenditures for the three-year period does not exceed $3,000,000 or $1,000,000 for any one-year period. These costs shall include expenditures for leases, wells, pipeline, compressor and related facilities, but shall not include the cost of the gas to be used for testing purposes.

(5) The cost of any project ultimately determined to be infeasible for storage shall be charged to Account No. 822 of Part 201, Underground Storage Exploration and Development Expenses.

(6) Applicant agrees to submit within 60 days after the end of each year of the three-year budget period a statement, under oath, showing for each project:

(i) A description of the facilities constructed and the type of storage reservoir; *i.e.*, gas expansion or dry gas, water-drive or acquifer.

(ii) The location of the facilities.

(iii) The cost of such facilities.

(iv) The monthly volumes of gas injected into and withdrawn from each reservoir.

(v) An estimate of the storage capacity and daily deliverability of each project.

(7) If the reservoir to be tested and developed is an aquifer-type reservoir, applicant agrees to submit for each such project quarterly reports, under oath, containing the following information in addition to the data required by subparagraph (6) hereof:

(i) The daily volumes of natural gas injected into and withdrawn from the aquifer during the quarter and the volume of gas in the aquifer at the end of each month.

(ii) The maximum daily injection or withdrawal rate experienced during the quarter and the average working pressure on such maximum days taken at a central measuring point where the total volume injected or withdrawn is measured.

(iii) Results of any tracer program by which leakage of gas may be determined.

(iv) Any pressure surveys of gas wells and water levels in observation wells conducted during the quarter by individual well. Copies of any core analyses, gamma ray, neutron or other electric log surveys and back-pressure tests taken during the quarter.

(v) A map of the storage project showing the location of the wells, the latest revised structure contours, the location and extent of the gas bubble. This map need not be filed if there is no material change from the map previously filed.

(vi) Such other data or reports which may aid the Commission in the evaluation of the project.

(vii) Reports shall continue to be filed quarterly through the three-year period and thereafter until the project is either certificated for regular service or abandoned, unless otherwise ordered by the Commission.

[Secs. 7, 15, 16, 52 Stat. 824, 829, 830 as amended 56 Stat. 83, 84; 15 U.S.C. 717f, 717n, 717o.]

(B) The caption of this proceeding is amended to read as set forth above.

(C) The amendments herein adopted shall be effective August 12, 1964.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 421

ORDER AMENDING LICENSE (TRANSMISSION LINE)

(Issued August 12, 1964)

Application was filed on January 30, 1964, and supplemented on April 24, 1964, by Pacific Power & Light Company, licensee for transmission line Project No. 421, for amendment of its license for the project affecting lands of the United States and lands formerly within the Klamath Indian Reservation.

The application was filed in response to the Commission's letter of June 6, 1963 requesting the licensee to apply for amendment of Article 10 of its license (the annual charge article) to reflect the fact that Federal trusteeship over the property of the Klamath Indians was terminated on August 13, 1961 by Proclamation issued by the Secretary of the Interior on August 10, 1961 (26 F.R. 7362), pursuant to the Act of August 13, 1954, as amended (68 Stat. 718; 25 U.S.C. 564(g)). The termination of trusteeship removed the basis for the imposition of annual charges for the occupancy by the project transmission line on the former Indian lands.

Annual charges under the license for the occupancy by the transmission line of Indian lands totalling $205.56 ($68.52 per annum) for the calendar years 1961 through 1963 have been paid by the licensee, and are being held on special deposit. This sum will be refunded to the licensee.

In view of the elimination of the lands formerly designated as Indian lands, we are fixing the amount of annual charges for the occupancy by the line of other lands of the United States at the minimum sum of $5.00, as specified in Section 11.21 of the Commission's Regulations.

The Commission finds:

It will not be inconsistent with the public interest to amend Article 10 of the license to adjust the annual charges specified therein.

The Commission orders:

(A) Article 10 of the license for Project No. 421 is hereby amended to read as follows:

Article 10. The Licensee shall pay to the United States the following annual charges:

(i) For reimbursing the United States for the costs of administration of Part I of the Act, $5.00;

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $5.00.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2085

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING AUTHORIZED INSTALLED CAPACITY AND ANNUAL CHARGES

(Issued August 12, 1964)

On October 30, 1961, Southern California Edison Company, Licensee for Project No. 2085, filed for Commission approval revised exhibits comprising Exhibit J (one sheet), Exhibit K (8 sheets), Exhibit L (8 sheets), and Exhibit M (6 pages). Also filed were revised Exhibits F, H, and I. However, Commission approval of the latter exhibits is not required.

The revised Exhibits J and K show minor changes in tunnel alignment and length, and the final location of project access roads. Commission approval of these exhibits would: (1) necessitate the elimination from the license of Exhibit K drawing (FPC No. 2085-29), showing lands of the United States then used as borrow areas, tunnel dump sites, construction yards, and construction roads; (2) reduce the lands of the United States occupied by the project, exclusive of those used for transmission line right-of-way only, by 1,479.66 acres, with a resultant decrease in the amount of annual charges for such occupancy; and (3) increase the lands of the United States used for transmission line right-of-way only from 4.82 miles to 5.54 miles of 200-foot wide right-of-way, with a resultant increase in the amount of annual charges for such occupancy.

The changes reflected on the revised Exhibit L drawings and Exhibit M involve project design refinements, such as: a decrease in the height of both Rock Creek and Ross Creek diversion dams (19 to 9 feet and 15 to 7 feet, respectively); a decrease in the diameter of the steel pipelines from the diversion dams; an increase in the diameter of the penstock; and the relocation of the powerhouse to a greater depth, *i.e.*, by placing the turbine centerline 15 feet lower at elevation 2,225 feet due to a change in the turbine from an impulse type to a reaction type. The turbines have been changed from an impulse type rated at 88,000 horsepower each at a head of 940 feet to a reaction type rated at 88,000 horsepower each at a head of 950 feet. The generator ratings were changed from 63,000 kilowatts to 64,680 kilowatts. The normal and maximum tailwater elevations have been decreased 2 feet to elevation 2,230 and 2,255 feet respectively.

The Chief of Engineers and the Secretary of the Army have approved the project plans insofar as the interests of navigation are concerned, pursuant to Section 4(e) of the Federal Power Act.

The Forest Service, Department of Agriculture, has advised that the project changes are not inconsistent with the purposes for which the Sierra National Forest was created or acquired.

Certain errors respecting land ownership on the revised Exhibit K tracings have been corrected pursuant to authorization by the licensee in letter dated March 18, 1964.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

project and the exhibits described in this finding as being superseded and which are now part of the license should be eliminated therefrom:

Revised Exhibit	FPC No.	Entitled	Superseding FPC No.
J	2085-46	General Map Showing Mammoth Pool Project	2085-15
K, (8 sheets)	2085-47 through 2085-54	Detail Map of Mammoth Pool Project	2085-16 through 2085-23
L, (8 sheets)	2085-55	Mammoth Pool Dam	2085-24
	2085-56	Intake, Shakeflat Crossing and Tunnel Sections	2085-25
L	2085-57	Penstock and Surge Chamber Spillway—Mammoth Pool Reservoir.	2085-12
	2085-58		2085-28
	2085-59	Ross and Rock Creeks Diversions	2085-30
	2085-60	Generator Deck Plan of Powerhouse	2085-43
	2085-61	Sectional Plans—Powerhouse	2085-44
	2085-62	Sectional Elevations of Powerhouse	2085-45

(2) Exhibit K drawing (FPC No. 2085-29) entitled "Access Roads and Barrow Area Sites", now part of the license for the project should be eliminated from the license.

(3) Revised Exhibited M, filed October 30, 1961, consisting of six typewritten pages, entitled "General Description Mechanical, Electrical and Transmission Equipment", conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and superseded Exhibit M, filed September 30, 1957, and which is now part of the license for the project, should be eliminated therefrom.

(4) The presently authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is by this order increased from 168,000 horsepower to 172,500 horsepower, and the amount of annual charges, based on such increased capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(5) The decreased amount of annual charges for recompensing the United States for the occupancy of its lands by the project, exclusive of transmission line right-of-way, is reasonable as hereinafter fixed and specified.

(6) The increased amount of annual charges for recompensing the United States for the occupancy of its lands by the project for transmission line right-of-way only, is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised project exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2085, and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

(B) The exhibit described in finding (2) above is hereby eliminated from the license for the project.

(C) The revised Exhibit M described in finding (3) above is hereby approved as part of the license for the project, and the exhibit described in the same finding as being superseded should be eliminated from the license for the project.

(D) To reflect the project changes mentioned above, subparagraph (b) of finding 2 of the license for Project No. 2085 is hereby amended in part to read as follows:

* * * * * * *

Rock Creek Diversion Dam, across Rock Creek, approximately 9 feet high above stream bed;

Ross Creek Diversion Dam, across Ross Creek, approximately 7 feet high above stream bed;

Mammoth Pool Tunnel, about 39,560 feet long, to extend from Mammoth Pool Reservoir to the Mammoth Pool Powerhouse penstocks;

An intake structure at the reservoir, a surge chamber and a rock trap in the tunnel section, and a penstock 1988 feet long;

* * * * * * *

Mammoth Pool Powerhouse, of outdoor type, approximately nine miles upstream from the Licensee's Big Creek Powerhouse No. 3 (Project No. 120), to contain two 64,680 kw vertical generators (total 129,360 kw), each direct-connected to a hydraulic turbine rated as 88,000 hp at 950 feet effective head (total 176,000 hp);

* * * * * * *

220-kv transmission line about 7 miles long from Mammoth Pool Powerhouse to the Licensee's existing Big Creek Powerhouse No. 3;

(E) Article 38 of the license is hereby amended by substituting (172,500 horsepower) for (168,000 horsepower) in subparagraph (i); ($3,851.46) for ($6,810.78) in subpargaraph (ii); and ($88.64) for ($77.12) in subparagraph (iii).

(F) This order is effective as of January 1, 1964.

(G) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward* and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2198

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued August 12, 1964)

On April 27, 1964, Southern California Edison Company, licensee for Project No. 2198 filed a request that Exhibit K (FPC No. 2198–2), on file with the Commission, be revised by the staff to show thereon the project boundaries on private lands over which the licensee had obtained easements for project use. The request was made pursuant to a staff letter dated March 23, 1964, to assist in making a determination of original cost of the project.

In accordance with the licensee's request the staff has made appropriate changes and notations on the Exhibit K.

The Commission finds:

Exhibit K (FPC No. 2198–2), designated as "Detail Map of Santa Ana No. 3 Project," now on file with the Commission, and revised on April 27, 1964, by our staff as requested by the licensee, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

The revised Exhibit K designated and described in the above finding is hereby approved as part of the license for Project No. 2198.

---

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

L. P. STARKEY, PROJECT NO. 1093

ORDER DISMISSING INCOMPLETE APPLICATION FOR NEW LICENSE (MINOR)

(Issued August 12, 1964)

Application was filed on April 14, 1961 by L. P. Starkey, (Applicant) of Fort Collins, Colorado, for a new license under the Federal Power Act (Act) for minor Project No. 1093, located on Falls Creek in Larimer County, Colorado, and affecting lands of the United States within the Roosevelt National Forest.

By letter dated July 14, 1961, the Forest Service advised that a sawmill, covered under the expired license and included in the application for new license, is no longer in operation, and that project land ownership had changed from that shown on Exhibit F of the application. The Service offered no objection to the issuance of a new license provided that Applicant prior to the issuance of a new license: (1) clean up the debris on Forest lands; (2) delete reference to the sawmill in the application; and (3) correct the land ownership status shown on Exhibit F.

By Commission letter dated September 7, 1961, Applicant was requested to clarify and supplement his application for new license with respect to the matters raised by the Forest Service. The requested supplemental data has not been filed by the Applicant.

By letter dated December 19, 1962, the Forest Service advised that the conditions set forth in its afore-mentioned July 14, 1961 letter had not been complied with, and recommended dismissal of the application for new license. By undated letter received by the Commission June 22, 1964, the Forest Service advised that its conditions had still not been complied with and again recommended dismissal of the application.

The Commission finds:

(1) Applicant has failed to complete his application for new license and has failed to give any assurance that he intends to do so.

(2) No good reason is apparent for continuing the incomplete application on the active docket of the Commission and, therefore, the application should be dismissed.

The Commission orders:

The incomplete application for license for minor Project No. 1093 is hereby dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, ET AL., DOCKET NO. CP63-204, ET AL.

(Issued August 12, 1964)

On July 29, 1964, the presiding examiner granted a recess in the above-entitled proceeding from August 24 to September 9, 1964, pursuant to a motion made by counsel for Fuel Research Council, *et al.* Subsequently on July 29, 1964, Gulf

Pacific Pipeline Company, (Gulf Pacific), Humble Oil & Refining Company (Humble), The Department of Water and Power of the City of Los Angeles (Department), and Southern California Edison Company (Edison) filed, as joint appellants, an appeal from that ruling by the presiding examiner. Answers to the appeal were filed by Fuels Research Council, *et al.*, and Transwestern Pipeline Company on July 31, 1964, and August 6, 1964, respectively. Appellants, both on the record and in their appeal, stated that they would not oppose a recess of one week in the proceeding, but would be opposed to a recess for a longer period. Counsel for other parties to the proceeding indicated on the record that they would not object to a recess for a two week period, as ordered by the examiner.

While the Commission functions continuously during the month of August it has been the policy in recent years to avoid, as far as reasonably possible, setting or holding hearings during the month of August. This policy was undertaken because it was recognized that, without knowledge of a definite period during which hearings would not be held, practitioners before the Commission and witnesses in specific cases could not otherwise plan vacation schedules. While we recognize the urgency of disposition of the administrative matters before us, we also recognize that many matters can best be accelerated if the parties concerned have an opportunity to freshen their outlook after a period of relaxation. The Commission is not in a position to judge the posture of a particular case at any specific time, and therefore the Commission generally has left this determination as to whether or not a condition exists which would require hearings during August up to the presiding examiner in each case.

In this specific case, we stated in our "Order on Motions to Expedite Hearings," that this proceeding "must be conducted according to a firm schedule, subject to deviation only in extraordinary circumstances, and that such schedule should be geared to bringing the proceeding to a conclusion at the earliest possible moment."[1] We still adhere to that statement, but we do not find that statement inconsistent with a recess in this case for a brief period, particularly in view of the aforementioned Commission policy with regard to the month of August.

We note that the presiding examiner has thus far conducted this proceeding expeditiously and in full conformity with the above-quoted statement. We are confident the presiding examiner will continue to employ all means at his disposition to so conduct this proceeding. If the presiding examiner, with his complete knowledge of the posture of this specific case, has decided that a recess from August 24 to September 9, 1964, is not unreasonable and will not interfere with the expeditious disposition of this proceeding, then the Commission will defer to the presiding examiner's judgment in this matter.

The Commission orders:

The appeal from the ruling of the presiding examiner granting a recess is denied.

---

[1] Order on Motions to Expedite Hearings (issued August 22, 1963) p. 2 [unreported].

WISCONSIN PUBLIC SERVICE CORPORATION, PROJECT NO. 1966

ORDER APPROVING REVISED EXHIBIT L DRAWING

(Issued August 12, 1964)

On April 13, 1964, Wisconsin Public Service Corporation, licensee for Project No. 1966, known as the Grandfather Falls development, filed application for Commission approval of a revised Exhibit L–7 drawing (FPC No. 1966–10).

The revised Exhibit L drawing shows the following described minor changes in the project works:

(1) Removal of the tie with the former 69 kv line from Wausau to Rhinelander;

(2) Addition of three 66.9/44 kv transformers to permit entire plant output to be fed into the licensee's 46 kv system;

(3) Removal of two 6.9/44 kv transformers and disconnection of one 6.9/44 kv transformer which remains as a spare;

(4) Installation of a step regulator in the 46 kv switching station; and

(5) Installation of an oil circuit breaker on each side of the step regulator.

The licensee filed a print of the aforementioned revised Exhibit L drawing showing the changes described above, and requested our staff to reflect the changes on the Exhibit L–7 tracing on file with the Commission, and this the staff has done.

The Commission finds:

The Exhibit L–7 tracing (FPC No. 1966–10) entitled "General Design Drawing of Lower Substation—Grandfather Falls Hydroelectric Development", revised by the staff on April 13, 1964 as requested by the licensee, and superseding Exhibit L–7 (FPC No. 1966–10) as revised April 1, 1960, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

Exhibit L–7 (FPC No. 1966–10) as revised April 13, 1964, is hereby approved as part of the license for Project No. 1966, and the aforementioned superseded Exhibit L–7 is hereby eliminated from the license for the project.

*This matter was decided prior to the death of Commissioner Woodward who participated in the decision.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, ET AL.

ORDER PERMITTING ADDITIONAL INTERVENTIONS

(Issued August 14, 1964)

Pursuant to the Commission's "Order Enlarging Issues," 31 FPC 1595, issued herein on June 29, 1964, notices of intervention were filed by The Public Service Commission of the State of New York,[1] the Pennsylvania Public Utility Com-

[1] The notice or petition to intervene was not filed within the prescribed time.

mission, and Suburban Rate Authority, Minnesota.[1] In addition, timely petitions to intervene were filed by the following named persons:

The Brooklyn Union Gas Company
Consolidated Edison Company of New York, Inc.
Consolidated Natural Gas Company System
Hope Natural Gas Company
Lake Shore Pipe Line Co.
New York State Natural Gas Corporation
Independent Natural Gas Association of America
Lone Star Gathering Company
Long Island Lighting Company [1]
Memphis Light, Gas and Water Division (Memphis)
Oklahoma Illinois Gas Pipeline Company
Philadelphia Electric Company
The Preston Oil Company
Public Service Electric and Gas Company
Southern Natural Gas Company
Tennessee Gas Transmission Company
Texas Gas Transmission Corporation
Texas Eastern Transmission Corporation
Trunkline Gas Company
Union Producing Company
United Gas Pipe Line Company
Willmut Gas and Oil Company

Supplemental Petitions to Intervene: [2]
Colorado Interstate Gas Company
Kansas-Nebraska Natural Gas Company, Inc.

On August 3, 1964, the Hunt Oil Company filed an answer and objection to Southern Natural Gas Company's petition to intervene contending that Southern failed to assert an interest, under Section 1.8(b) of the Commission's Rules of Practice and Procedure, which would warrant a grant of intervention. Our June 29 order stated that the Commission intends to consider proposals "to change the present policy" for fixing the rates or cost allowances for pipeline gas production. If Southern believes, as it says it does, that the adoption of such proposals might affect the rates it is permitted to charge, an interest adequate to support its intervention has been advanced. Moreover, we believe that Southern and other gas producing pipelines are entitled to participate in the development of new regulatory concepts and principles even though they do not produce gas in the pricing areas presently under consideration. *Cf. Area Rate Proceedings, et al.* (Hugoton-Anadarko Area), "Order Permitting Intervention", 31 FPC 888, issued April 8, 1964.

The Commission orders:

Subject to the rules and regulations of the Commission, all the petitioners and The Public Service Commission of the State of New York, the Pennsylvania Public Utility Commission, and the Suburban Rate Authority, Minnesota, named hereinabove are permitted to intervene in these consolidated proceedings and to participate on a joint or individual basis. *Provided, however,* that the par-

[2] The supplemental petitions were unnecessary inasmuch as these two natural gas companies were previously permitted to intervene by order issued in these proceedings on April 8, 1964. Our June 29, 1964, order indicated we would "accept new petitions to intervene" for filing.

ticipation of such interveners shall be limited to matters affecting asserted rights and interests specifically set forth by said petitioners in their petitions and *Provided, further* that the admission of said petitioners as interveners shall not be construed as recognition by the Commission that they might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-89

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued August 14, 1964)

On May 18, 1964, Cities Service Gas Company (Cities Service) and Natural Gas Pipeline Company of America (Natural) filed in Docket No. CP64-89 a joint motion to extend to May 1, 1965, the period during which natural gas may be exchanged, and to change to Carter County, Oklahoma, the point of delivery of natural gas now delivered by Natural to Cities Service in Garvin County, Oklahoma, as authorized by order issued January 2, 1964, 31 FPC 3, in said docket, all as more fully set forth in the motion to amend.

The order of the Commission issued in the subject docket on January 2, 1964, authorized Cities Service and Natural to construct certain facilities and to exchange up to 40,000 Mcf of natural gas daily for a period terminating May 1, 1964. Exchange deliveries for reasons of pressure differential made through Lone Star Gas Company by Natural to Cities Service are now proposed to be made directly to Cities Service at a delivery point in Carter County, Oklahoma. The change in delivery point will utilize existing facilities and will simplify the exchange by elminating the participaton of Lone Star Gas Company.

On June 16, 1964, Natural Gas Pipeline Company of America tendered for filing its First Revised Sheet No. 49, Original Sheet No. 49-A and Original Sheet No. 49-B to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the period during which natural gas may be exchanged and the change of delivery point.

On June 22, 1964, Cities Service Gas Company tendered for filing its First Revised Sheet No. 62, Original Sheet No. 62-A and Original Sheet No. 62-B to its FPC Gas Tariff, Original Volume No. 2, covering the extension of time during which natural gas may be exchanged and the change of delivery point.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 17, 1964 (29 F.R. 9686). No protest or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 2, 1964, in Docket No. CP64-89 be amended as hereinafter ordered.

(2) The public convenience and necessity require that both the revised and the original tariff filings of Natural Gas Pipeline Company of America and

Cities Service Gas Company, hereinabove described, be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) The Commission's order issued January 2, 1964, in Docket No. CP64–89 be and the same is hereby amended so as to extend to May 1, 1965, the period during which natural gas may be exchanged, and to change the point of delivery of natural gas so exchanged to Carter County, Oklahoma, for natural gas now delivered by Natural to Cities Service in Garvin County, Oklahoma.

(B) Natural Gas Pipeline Company of America's First Revised Sheet No. 49, Original Sheet No. 49–A and Original Sheet No. 49–B to its FPC Gas Tariff, Second Revised Volume No. 2, are hereby accepted for filing to become effective on the date this order issues.

(C) Cities Service Gas Company's First Revised Sheet No. 62, Original Sheet No. 62–A and Original Sheet No. 62–B to its FPC Gas Tariff, Original Volume No. 2, are hereby accepted for filing to become effective on the date this order issues.

(D) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64–250

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 14, 1964)

On April 22, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP64–250 an application, as amended on June 11, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain minor tap and measuring facilities, and the short-term sale and delivery of natural gas to Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska) in interstate commerce for resale, all as more fully set forth in the application.

Under the proposed sale agreement the Applicant will be able to reduce the amount of accumulated excess allowables of wells located in the Kansas-Hugoton Field from which Applicant is purchasing natural gas. The sale agreement provides for the delivery of a total of twenty (20) million Mcf of natural gas to Kansas-Nebraska over a three-year period on an interruptible basis at volumes up to 40,000 Mcf per day. The volumes will be delivered at four points in Kearney, Finney and Grant Counties, Kansas; of which two are existing and two are proposed. The proposed points of delivery and interconnection will cost approximately $16,730, which will be defrayed from treasury funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and amendment submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas, as hereinbefore described and as more fully described in the application and amendment thereto, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the sale and delivery of natural gas to Kansas-Nebraska Natural Gas Company, Inc. be limited in time to a three-year period commencing with the date of issuance of this order, and in volume to a total not to exceed 20,000,000 Mcf during the said three-year period on an interruptible basis with daily deliveries not to exceed 40,000 Mcf.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Cities Service Gas Company, authorizing the construction and operation of facilities and the sale and delivery of natural gas as more fully described in the application and amendment thereto in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) The certificate issued by paragraph (A) above be limited in time to a three-year period commencing with the date of issuance hereof and in volume to a total not to exceed 20,000,000 Mcf during the said three-year period on an interruptible basis with daily deliveries not to exceed 40,000 Mcf.

(E) Applicant shall file with the Commission within 15 days from the date of issuance hereof its agreement with Kansas-Nebraska dated February 3, 1964, and the amendment thereto dated June 3, 1964, as a special rate schedule to Applicant's FPC Gas Tariff, Original Volume No. 2.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-298

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 14, 1964)

On June 11, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-298 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas transmission facilities, and the sale and delivery of natural gas for resale. The facilities proposed to be constructed and operated consist of metering facilities to be located at a point adjacent to Applicant's Permian-San Juan Crossover Line in Torrance County, New Mexico. The sale and delivery of natural gas through the said facilities is to be made to EMW Gas Association (EMW), a municipal corporation formed under the Laws of New Mexico of 1963, Chapter 309, all as more fully described in the application on file with the Commission and open to public inspection.

The estimated total cost of the proposed facilities is $6,050, which will be financed from current working funds.

EMW Gas Association proposes to construct 64 miles of 4.5-inch and 2⅜-inch pipelines for the transmission of natural gas to its customers in the Villages of Willard and Moriarty, the Town of Estancia and the respective environs of each, also the intervening and adjacent areas, all of which are located in Torrance County, New Mexico.

The estimated peak day and annual volumes of gas to be delivered to EMW by Applicant for the third year of service are 1,324 Mcf and 148,206 Mcf, respectively.

The service to be engaged in by EMW is to residential, commercial and irrigation consumers, with firm gas service purchased under Applicant's Rate Schedule A-2 and B-3. Non-firm gas service is to be purchased under Applicant's Rate Schedule D-3.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the related transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Sections 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KENTUCKY UTILITIES COMPANY, DOCKET NO. E-7171

ORDER AUTHORIZING ACQUISITION OF PROMISSORY NOTES

(Issued August 14, 1964)

Kentucky Utilities Company (Applicant), a corporation organized under the laws of the State of Kentucky and operating in that state and the State of Tennessee with its principal place of business in Lexington, Kentucky, filed an application on June 25, 1964, for authorization pursuant to Section 203 of the Federal Power Act, to acquire promissory notes in a total amount not to exceed $1,000,000 from the Old Dominion Power Company (Old Dominion) organized and operating in the State of Virginia with its principal business office at Norton, Virginia, a wholly owned subsidiary.

According to the application, Applicant proposes to acquire from Old Dominion, promissory notes proposed to be issued by Old Dominion to the Applicant to evidence borrowings not to exceed a total of $1,000,000 to be made by Old Dominion from the Applicant from time to time during the years 1964 and 1965; each such note to be dated on the date on which the borrowing to be evidenced thereby shall be made, to bear interest at a rate not to exceed 4½% per annum from such date, to be unsecured, and to be payable on or before ten years from the date thereof. Each note will be subject to repayment at any time (in whole or in part) without premium or penalty according to the application.

The Applicant states that the funds proposed to be borrowed by Old Dominion from the Company will be used for one or more of the following purposes, namely: the construction, completion, extension or improvement of its electric utility facilities; for the improvement or maintenance of its service; and for the reimbursement of moneys actually expended from income, or from other moneys in the treasury of Old Dominion not secured by or obtained from the issuance of its stocks or stock certificates or other evidences of indebtedness payable at periods of 12 months or more after the date thereof.

According to the application, Applicant believes that the interest rate of not to exceed 4½% to be borne by the proposed notes is as low or a lower cost of money to Old Dominion than it could otherwise obtain, and is amply justified by existing conditions in the capital markets.

By order issued June 30, 1964, the State Corporation Commission of Virginia approved the issuance of $1,000,000 of 4½% promissory notes by Old Dominion to Applicant in the manner described above.

Written notice of the application has been given to the Kentucky Public Service Commission, the State Corporation Commission of Virginia and the Governors of those States. Notice of the application was also published in the Federal Register on July 23, 1964 (29 F.R. 9917), stating that any person desiring to be heard or to make any protest with reference to said application should file a petition or protest with the Federal Power Commission, Washington D.C., 20426, on or before August 3, 1964. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 18, 1957, *Kentucky Utilities Company*, Docket No. E-6756 (18 FPC 44).

(2) Old Dominion, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 18, 1957, *Kentucky Utilities Company*, Docket No. E-6756 (18 FPC 44).

(3) By the proposed transaction, all as described above, Applicant will acquire the securities of Old Dominion, another public utility within the purview and subject to the requirements of Section 203 of the Federal Power Act.

(4) Old Dominion is organized and operating in the State of Virginia under the laws of which its security issues are regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is therefore exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) Applicant's acquisition of the Promissory Notes of Old Dominion, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons set forth in the recital above.

(6) It has not been shown with respect to the proposed transaction, all as described above, that Applicant is subject to any requirements of the Public Utility Holding Company Act of 1935 or a rule, regulation, or order thereunder which would exempt it from the requirements of Section 203 of the Federal Power Act by reason of Section 318 thereof.

The Commission orders:

(A) The acquisition by Applicant of not to exceed $1,000,000 in Promissory Notes of Old Dominion, all as described above, upon the terms and conditions

and for the purposes as set forth in the application, is hereby authorized and approved subject to the provisions of this order.

(B) This authorization shall expire unless the transaction herein authorized and approved is consummated on or before December 31, 1965.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP64-39

ORDER GRANTING REQUEST FOR MODIFICATION OF ORDER AND ACCEPTING REVISED TARIFF SHEETS FOR FILING

(Issued August 14, 1964)

On July 23, 1964, Midwestern Gas Transmission Company (Midwestern), pursuant to Section 19(a) of the Natural Gas Act, and Section 1.34 of the Commission's Rules of Practice and Procedure, filed an Application for Rehearing and Request for Modification of the Commission's order issued on June 24, 1964, 31 FPC 1585, herein, insofar as that order relates to the filing of revised tariff sheets applicable to sales on its Southern System, in lieu of continuing the practice of crediting monthly bills of the Southern System customers. The Commission by order issued October 30, 1963, 30 FPC 1149, in Docket No. G-16841, approved the Stipulation and Agreement between Midwestern and its Southern System customers which provides, among other things, that Midwestern shall make certain reductions in rates with respect to sales made during the period from October 1, 1962 through September 30, 1963, which should be accomplished by making appropriate refunds, and for sales made following that period by crediting the monthly bills of the customers. It provided that the crediting procedure should be continued until such time as a change in Midwestern's rate level is to become effective.

Subsequently, by order issued June 24, 1964, in Docket No. RP64-39, the Commission accepted Midwestern's proposal to further reduce its rates to reflect the decrease in Federal Income Tax from 52 to 50 percent. The Commission therein noted that the instant rate reduction was a change in rate level as contemplated by the aforementioned October 30, 1963 order, and required that Midwestern file revised tariff sheets in order that Midwestern's tariff would thereafter reflect the charges actually being made. On July 23, 1964, Midwestern made the requisite filings.

However, concurrently with its filing of the revised tariff sheets, Midwestern filed the aforementioned Application requesting that the order of June 24, 1964, be modified so as to make the revised sheets applicable to the Southern System effective as of August 1, 1964, rather than March 1, 1964. Midwestern stated that it had no objection to an effective date of March 1, 1964 for the revised tariff sheets applicable to the Northern System.

In support of its Application, Midwestern states that (1) an additional reduction in Tennessee's rates effective as of April 1, 1964, has been made and any Midwestern filing effective as of March 1, 1964, could not reflect the reduction in its purchase gas cost and this would be disadvantageous to its customers, (2) the

filing of a rate level to be effective as of March 1, 1964, also would not provide for the balancing of the monthly credits during that portion of the year when gas purchases are made at below the customers' annual load factors and this would be disadvantageous to Midwestern, and (3) the monthly refund procedure of crediting customers' bills through June 1964 has already been completed.

The Commission finds:

Good cause exists for modifying the order of June 24, 1964 to provide that the revised tariff sheets applicable to the Southern System (Second Revised Sheet No. 5 and First Revised Sheet Nos. 6, 7, 8A, 8B, 8C, 20A and 26) be effective as of August 1, 1964, rather than March 1, 1964.

The Commission orders:

(A) Midwestern's Request for Modification of the Order issued herein on June 24, 1964, is hereby granted and the revised tariff sheets filed by Midwestern applicable to its Southern System (First Revised Sheet No. 5 and Second Revised Sheet Nos. 6, 7, 8A, 8B, 8C, 20A and 26) are accepted for filing to be effective as of August 1, 1964.

(B) The revised tariff sheets filed by Midwestern applicable to its Northern System (Second Revised Sheet No. 10 and First Revised Sheet Nos. 11, 14, 18, 21 and 24) are hereby accepted for filing to be effective as of March 1, 1964.

(C) In all other respects, the Commission's order issued June 24, 1964, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-289

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 14, 1964)

On June 4, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-289 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in Polk County, Texas, and the transportation of approximately 5,000 Mcf of natural gas in interstate commerce for sale and delivery to Gulf Bitulithic Company during a limited period of six (6) months, all as more fully set forth in the application.

Applicant proposes to construct and operate a tap valve, measuring and regulating station, and appurtenant facilities at Milepost 0.8 on its 2-inch Corrigan tap line, all being in the A. B. Watts Survey of Polk County, Texas. The proposed facilities will enable Applicant to sell and deliver approximately 5,000 Mcf of natural gas to Gulf Bitulithic Company during a period of six months or less, to meet the requirements of the purchaser for asphalt heating purposes in the paving of some six miles of U.S. Highway No. 59 in Polk County, Texas.

In connection with the application Applicant requested waiver of the requirements of Part 157 of the Commission's Regulations as provided in Section 157.7 thereof relating to the omission of data and information not required or necessary in the subject filing. Waiver to the extent requested appears justified under the circumstances of the subject filing.

A temporary certificate was issued to the Applicant on June 18, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The proposed construction and operation of facilities and transportation and delivery of natural gas to Gulf Bitulithic Company, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the requirements of Part 157 of the Commission's Regulations be waived to the extent requested.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and transportation and delivery of natural gas to Gulf Bitulithic Company, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above shall be effective for a period of six months from the date of issuance of this order, at the end of which time Applicant may remove its facilities without further order from the Commission.

(D) Waiver of the requirements of Part 157 of the Commission's Regulations is granted to the extent requested pursuant to the provisions of Section 157.7 thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LAKE SHORE PIPE LINE CO., DOCKET NO. CP63-243

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 17, 1964)

On April 28, 1964, Lake Shore Pipe Line Co. (Applicant), filed in Docket No. CP63-243 an application to amend an order of the Commission issued July 22, 1963, 30 FPC 373, granting a budget type authorization which permitted Applicant to construct and operate lateral and field facilities to take into its pipeline system natural gas purchased from independent producers in the general area of its system. Said order provided that the total cost of such facilities constructed by Applicant in the twelve months following July 22, 1963, was not to exceed a maximum of $100,000, with no single project exceeding $25,000 in cost. The application to amend seeks authorization to increase the limit on aggregate expenditures to $110,000 during the 12-month effective period of the certificate, and requests authorization to permit construction of facilities to connect to Worldwide Petroleum Corporation's Jacob No. 1 Well, all as more fully set forth in the application to amend.

The application to amend states that on April 23, 1964, Worldwide Petroleum Corporation was authorized in Docket No. CI64-952 to sell natural gas to Applicant, and that lateral facilities required to connect such supply will cost $22,000, which when added to expenditures already made under the budget-type authorization issued July 22, 1963, would exceed the limits in said authorization by approximately $8,000.00.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 7, 1964 (29 F.R. 8503). No protest or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 22, 1963, in Docket No. CP63-243 be amended as hereinafter ordered.

(2) Good cause has been shown for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended.

The Commission orders:

(A) The Commission's order issued July 22, 1963, in Docket No. CP63-243 be and the same is hereby amended by increasing the authorized limitation imposed in said certificate order from $100,000.00 to $110,000.00, as requested in the application to amend filed herein.

(B) In all other respects said order shall remain in full force and effect.

(C) The cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure are hereby waived in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. RP64-42

ORDER PERMITTING REDUCED RATES TO BECOME EFFECTIVE

(Issued August 17, 1964)

On June 1, 1964, Lone Star Gas Company (Lone Star) tendered for filing proposed changes in its FPC Gas Tariff, Original Volume No. 1, to be effective as of January 1, 1964, constituting a reduction in rates and charges to reflect the reduction in Federal Income tax from 52 percent to 50 percent, which became effective January 1, 1964. The rate reduction thus proposed in Lone Star's Rate Schedule PL-1, as contained in tendered Substitute Third Revised Sheet No. 4 to Original Volume No. 1, would reduce the rate to Natural Gas Pipeline Company of America, its sole jurisdictional customer, by 0.05 per Mcf, *i.e.*, from 18.70 cents to 18.65 cents for an annual reduction of $15,665. Notice of the foregoing was issued June 8. The tender contained a mis-calculation which was corrected by Lone Star's tender of the above-identified substitute tariff sheet on July 15, 1964, increasing the reduction in rate and charge from 0.03 cent to 0.05 cent per Mcf and the annual amount from $9,399 to $15,665. The proposed rate filing does not change or otherwise affect Lone Star's existing obligations under any settlement agreements or Commission orders issued in any proceedings involving the rates and charges of Lone Star.

Lone Star requests that the Commission waive the notice requirements of Section 154.22 of the Commission's Regulations so as to permit the above-identified rate schedule to become effective as of January 1, 1964. No comment or protest has been received.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the above-identified revised tariff sheet may become effective on January 1, 1964, as hereinafter ordered.

(2) The rates and charges provided in the above-referenced revised tariff sheet are proper and in the public interest in carrying out the provisions of the Natural Gas Act and should be made effective as hereinafter provided and ordered.

The Commission orders:

(A) The thirty-day period of notice required by Section 154 of the Commission's Regulations under the Natural Gas Act is hereby waived with respect to the effective date of the above-identified revised tariff sheet, and such revised tariff sheet hereby is accepted for filing to be effective as of January 1, 1964.

(B) This order shall not be construed as relieving Lone Star from its existing obligations under the settlement agreement and Commission order in Docket No. RP60-4, issued December 1, 1961, 26 FPC 790, nor from any other outstanding obligation under settlement agreements or Commission orders involving the rates and charges of Lone Star.

(C) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Lone Star, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Lone Star or any other persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NEW ENGLAND POWER COMPANY, PROJECT NO. 2323

ORDER DENYING REQUEST FOR LICENSE AMENDMENTS

(Issued August 17, 1964)

By letter dated April 3, 1964, New England Power Company, licensee for Project No. 2323, has requested amendment of several articles of its license issued October 29, 1963, 30 FPC 1120.

(1) The licensee proposes amendment of Article 30 to include therein the following italicized language:

Article 30. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream *and within the boundaries of the project* resulting from construction and operation of the project, *unless Licensee owns said lands or has acquired appropriate flowage or other rights with respect thereto.* The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Special Article 30 is now standard Article 19 of revised Form L–3 (applicable to constructed projects affecting navigable waters of the United States), which accompanied our opinion in *South Carolina Electric & Gas Co.*, 30 FPC 1338 and 1658 Op. No. 411, Project No. 2315, November 21, 1963. In the language of the erosion and siltation article we made no distinction based on ownership of lands or water rights. The condition was prescribed to serve the public interest in river development, which clearly involves the control of erosion and siltation, a problem concerning construction, operation and maintenance of a project rather than ownership.

(2) The licensee proposes amendment of paragraph (C) of the license order to include the proviso that the application of all "Articles is to be consistent with the primary purpose of the project and with the provisions of the Act". In the alternative the Company requests amendment of six articles where one or both of these propositions do not appear. Each of these special conditions has since become standard and was specifically commented upon in Opinion 411.[1] In that opinion we noted that open-end conditions in Form L–3 had for many years insured that constructed projects would be best adapted to a comprehensive plan under foreseeable circumstances and we pointed to special conditions in common use which should be included within the standard form. The breadth of the duties of the Commission in this regard was indicated by the Supreme Court in *F.P.C.* v. *Tuscarora Indian Nation*, 362 U.S. 99, 118. As Section 10(a) of the Federal Power Act illustrates, a license condition which conforms to the Act may not necessarily be consistent with the primary purpose for which a project was constructed.

The Company recognizes that some open-end conditions might be consistent with the Federal Power Act but insists that it would be "better to determine all of the specific requirements prior to the issuance of the license". A similar

[1] In addition to special Article 30 (standard Article 19, Form L–3), the Company objects to the following special articles as now worded: Article 21 (standard Article 16: fish facilities); Article 22 (standard Article 13: additional generating capacity); Article 23 (standard Article 14: coordination with other power systems); Article 24 (standard Article 18: public access).

Special Article 25 is a combination of standard Article 17 (recreational facilities) and special Article 29 in Opinion No. 411 (recreational plan).

issue was disposed of adversely to New England's contention in *Portland General Electric Co.* v. *F.P.C.*, 328 F. 2d 165, CA9 Nos. 18427, 18432, February 7, 1964, where there was question, among other things, of an open-end condition under which there might be demanded a conveyance of lands outside project boundaries for navigation purposes. The Court held that in such event the licensee "would have its day before the Commission and in the courts" as to whether such action was authorized by the article and the Federal Power Act. Upon remand we held that inherent in the navigation article (standard Article 7, Form L–3 as here concerned) although not expressed was the assurance sought by the licensees that they would be entitled to a hearing and that the Commission would be required to find navigation improvement to be reasonably necessary and that the cost to the joint licensees would be reasonably consistent with their investment in the project. Portland General Electric Co., 32 FPC 356, Project No. 2233, July 24, 1964 (order modifying license order). Inherent in all license conditions in which the issues have not already been determined is the opportunity for a hearing which affords adequate protection to the licensee and other interested parties.

The Commission finds:

It is appropriate and in the public interest, in administering the Federal Power Act, that the aforesaid request for amendments be denied.

The Commission orders:

The Licensee's aforementioned April 3, 1964 request for license amendments is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IRVING PASTERNAK, DOCKET NO. RI64–751; FPC GAS RATE SCHEDULE NOS. 3 AND 5

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued August 17, 1964)

On July 24, 1964, Irving Pasternak (Pasternak) submitted for filing a document styled "Petition for Exercise by Commission of Supervisory Power Pursuant to Section 4(d) of Natural Gas Act to Grant Relief and Waive 30 Day Notice Requirement", which has been construed as a motion for reconsideration. Pasternak requests reconsideration of the order issued June 2, 1964, which suspended for one day a proposed increased rate, and reconsideration of the Commission's action in accepting for filing without suspension notices of change in Pasternak's FPC Gas Rate Schedule Nos. 3 and 5. Pasternak asks that its rate filings be made retroactively effective as of January 1, 1964.

On May 4, 1964, Pasternak tendered for filing a notice of change in its presently effective FPC Gas Rate Schedule No. 4, involving the jurisdictional sale of natural gas to El Paso Natural Gas Company (El Paso) in the Basin Dakota Field, Rio Arriba County, New Mexico (San Juan Basin). The proposed increased rate, designated as Supplement No. 1 to Pasternak's FPC Gas Rate Schedule No. 4, was suspended by order issued June 2, 1964, in Docket No. RI64–751, until June 5, 1964, when it became effective subject to refund. The proposed increased rate of 14.0¢ per Mcf which includes a 1.0¢ per Mcf minimum guarantee for liquids was suspended because it exceeded the applicable area price level of 13.0¢ per Mcf for increased rates as set forth in the *Commission's Statement*

of General Policy No. 61–1, as amended [18 CFR, Chapter I, Part 2, Section 2.56], by the amount of the minimum guarantee for liquids.

On May 4, 1964, Pasternak tendered for filing notices of change to its presently effective FPC Gas Rate Schedule Nos. 3 and 5, involving the jurisdictional sales of natural gas to El Paso in the South Blanco Field, Pictured Cliffs Formation, Rio Arriba and Sandoval Counties, New Mexico (San Juan Basin). The proposed increased rates were accepted for filing, effective on June 4, 1964.

In the motion for reconsideration, Pasternak urges that the increased rates be made retroactively effective as of January 1, 1964, the date Pasternak was contractually entitled to the increases on the ground that the illness of Pasternak's attorney caused Pasternak to overlook filing at an earlier date. In our view, good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit an earlier effective date for Pasternak's rate filings.

The Commission finds:

The motion for reconsideration filed by Pasternak on July 24, 1964, should be denied.

The Commission orders:

The motion for reconsideration filed by Pasternak on July 24, 1964, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALASKA HERRING PRODUCTS CO., INC., PROJECT NO. 1426

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued August 19, 1964)

Application was filed on April 10, 1964, by Alaska Herring Products Co., Inc. (Licensee) under Section 6 of the Federal Power Act (Act) for surrender of its license for major Project No. 1426, located on Sheckley Upper Lake, Sheckley Lower Lake, and Sheckley Creek flowing from the outlet of Sheckley Lower Lake into Port Armstrong on the southern end of Baranof Island, Alaska, and affecting lands of the United States within the Tongass National Forest.

The application for surrender was requested by the Commission in its letter dated March 30, 1964, inasmuch as the project had not been in operation since 1961. Annual charges under the license for the project have been paid through December 31, 1961. By letter dated June 25, 1964, the United States Forest Service advised that the National Forest lands occupied by the project have been restored to a condition satisfactory to the Service.

The Commission finds:

(1) Public notice of the application has been given as required by the Act. No protests or petitions to intervene have been received.

(2) Acceptance of surrender of the license for the project is appropriate as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 1426 is hereby accepted, effective as of December 31, 1961.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. G-19495

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 19, 1964)

On April 27, 1964, Mississippi River Fuel Corporation (Applicant) filed in Docket No. G-19495 an application to amend an order of the Commission issued January 4, 1960, 23 FPC 8, in Docket No. G-19495, which order as presently amended authorizes among other things the installation and operation of 19 compressor units consisting of a total of 5459 Hp on Applicant's gathering system in the Woodlawn Field in Harrison County, Texas. Applicant now seeks authorization to install and operate an additional 675 Hp compressor capacity on its gathering system in 1964, all as more fully set forth in the application.

The application to amend states that the additional 675 Hp compressor capacity is required due to the continued decline in pressure in the Woodlawn Field necessitating additional compression to enable Applicant to receive natural gas from its dedicated reserves. The estimated cost of the additional compressor capacity is $120,000, which will be defrayed from cash on hand.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on June 19, 1964 (29 F.R. 7832). No protest or petition to intervene has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 4, 1960, in Docket No. G-19495, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 4, 1960, in Docket No. G-19495, be and it is hereby further amended by authorizing Mississippi River Fuel Corporation to install and operate an additional 675 Hp of compressor capacity on its system in the Woodlawn Field in Harrison County, Texas, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SACRAMENTO MUNICIPAL UTILITY DISTRICT AND PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2155

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued August 19, 1964)

On May 12, 1964, Sacramento Municipal Utility District, joint licensee for Chili Bar Project No. 2155, filed application for Commission approval of certain revised project exhibits as part of the license for the project. The project affects lands of the United States.

The revised exhibits are designated and described as Exhibits K–27–1 and K–27–2 (FPC Nos. 2155–14 and –15) together with a 19-page typewritten supplemental metes and bounds description entitled "Exhibit K–27–1 & 2 (Supplement) Project No. 2155 Chili Bar Reservoir Proposal Project Boundary". These exhibits would supersede Exhibit K–2 (FPC No. 2155–11) now part of the project license.

The application divides the project area into two parts, Parcel A which is the main reservoir, and Parcel B which is a parcel of land of the United States which was required for part of an access road. The effect of our approval of the revised exhibits is to define and generally to reduce the project area for reservoir purposes.

Inasmuch as Article 26 of the license does not require the joint licensee to file Exhibit F, showing the ownership and acreage of the project lands, earlier than one year after the completion of the project works, namely, October, 1964, annual charges for occupancy of lands of the United States within the boundary of Project No. 2155 are reserved by Article 34 of the license for future Commission determination.

The Commission finds:

Revised Exhibits K–27–1 and K–27–2 (FPC Nos. 2155–14 and –15) and the 19-page supplement conform to the Commission's rules and regulations and should be approved except for Parcel B thereof, as part of the license for the project, and superseded Exhibit K–2 (FPC No. 2155–11) should be eliminated from the license for the project.

The Commission orders:

The revised exhibits and supplement mentioned in the above finding are hereby approved as part of the license for Project No. 2155 to the extent indicated therein, and the superseded exhibit mentioned in the same finding is hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE FALL RIVER EXPLORATION AND MINING COMPANY, PROJECT NO. 2053

REFERENCE TO ATTORNEY GENERAL FOR SUIT TO REVOKE LICENSE

(Issued August 20, 1964)

On September 23, 1954, 13 FPC 1405, the Commission issued a new license to The Fall River Power Company[1] for major Project No. 2053 for a period of 20 years, effective as of November 24, 1949.

The project is located in Fall River, a tributary of Clear Creek, in Clear Creek County, Colorado, and affects unsurveyed lands of the United States within the Arapaho National Forest.

According to the Commission's records, the project has not been in operation since February 1944. The project works are in a state of disrepair and a considerable amount of rehabilitation would be required before the project could be put into operation.

[1] The Fall River Power Company changed its name to The Fall River Exploration and Mining Company on January 8, 1958, whose address is P.O. Box 32, Idaho Springs, Colorado.

Article 26 of the license for the project fixes annual charges for the purpose of reimbursing the United States for the costs of administration of Part I of the Federal Power Act of one cent per horsepower on the installed capacity of the project (800 horsepower), plus two and one-half cents per 1,000 kilowatt-hours of gross energy generated by the project during the calendar year for which the charge is made. The article also fixes an annual charge in the amount of $64.80 for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands by the project.

Although requested to make payment, annual charges in the amount of $72.80 are owing for the calendar year 1963. Section 11.31(e) of the Commission's Regulations provides for the imposition of a penalty, in case of delinquency in payment, of 5 percent of the total amount so delinquent, assessed and added to the total charges which shall apply for the first month or part of month so delinquent with an additional penalty of 3 percent for each full month thereafter until the charges and penalties are satisfied in accordance with law.

The Commission finds:

The above-mentioned failure to pay the annual charges owing under the license for Project No. 2053 constitutes a violation of the terms of the license and the Regulations of the Commission under the Federal Power Act.

The Commission orders:

The afore-mentioned violation of the terms of the license for Project No. 2053 and of the Regulations of the Commission under the Federal Power Act is hereby referred to the Attorney General for the institution of proceedings under Section 26 of the Federal Power Act for revocation of the license for Project No. 2053, for collection of annual charges and penalties thereon, and for restoration of the lands of the United States involved to a condition satisfactory to the Forest Service, Department of Agriculture.

OPINION NO. 269-B

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. G-1116

MEMORANDUM OPINION AND ORDER DENYING PETITION TO REOPEN, MODIFYING AND ADOPTING PRIOR OPINION, AND DIRECTING REFUNDS OF EXCESS CHARGES

(Issued August 20, 1964)*

1. Proper treatment of extraction operations is to include all costs thereof in pipeline's cost of service and to credit thereto all revenues resulting from such operations. P. 635.
2. Since pipeline's purchased gas cost during February 20, 1952, through December 31, 1954, was subject to "spiral escalation" with respect to gas purchased from three producers, it is appropriate that such escalation be reduced and pipeline recompute and apply the percentage escalation to its gas costs during applicable period utilizing purchased gas volumes contained in prior report to Commission. PP. 635, 636.
3. Upon court remand, Commission *modifies* and *adopts* prior opinion; *denies* petition to reopen; and *directs* refunds.

---

*Order issued October 15, 1964, denying rehearing and granting stay, 32 FPC 1123. Affirmed, *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 348 F. 2d 340 (CADC-1965) Cert. denied, 382 U.S. 944 (1965).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

There remains before the Commission in this proceeding, upon the 1963 court remand of our Opinion No. 269–A,[1] the same issue which we have fully considered in Opinion No. 344–A, issued this date in *Panhandle Eastern Pipe Line Company*, Docket No. G–2506. That issue involves the revenues received by Panhandle from the extraction of gasoline and other liquids from natural gas at the Sneed, Texas, and Liberal, Kansas extraction plants, during the rate period from February 20, 1952 through December 31, 1954.

In this proceeding, Panhandle recommended, and the Commission in Opinion No. 269[2] adopted, an allocation of costs between Panhandle's pipeline business and its alleged "separate" gasoline extraction business. That method of allocation would reduce the pipeline's total cost of gas by a credit based upon the percentage of reduction of Btu of the gas stream as a result of the extraction operations. However, the court in City of Detroit[3] in 1955 disagreed with the Commission's utilization of the Btu allocation of costs and its ". . . failure to credit the revenues of the gasoline extraction operation . . ." (230 F. 2d at 823), and remanded Opinion No. 269 to the Commission for further proceedings not inconsistent with the court's opinion.

Following such remand, we issued Opinion No. 269–A and also Opinion No. 344, the latter relating to Panhandle's extraction operations in Docket No. G–2506 for the period January 1, 1955, through August 31, 1958. By those opinions we determined that the proper treatment of these extraction operations in Panhandle's cost of service is the inclusion of all costs and the crediting of all revenues resulting from such operations.

In our Opinion No. 344–A issued this date, *infra* p. 636 we have set out supplemental findings required by the court's 1963 remand and have readopted our conclusion reached in Opinion No. 344. That conclusion and the findings upon which it is based are equally applicable to this proceeding, relating to the earlier period, and are incorporated herein.

Panhandle's petition to reopen proceedings filed April 19, 1963, to the extent applicable to this proceeding, should be denied for the reasons fully set forth in Opinion No. 344–A.

Purchased Gas Cost Escalation

Panhandle's purchased gas cost during this period was subject to "spiral escalation" with respect to gas purchased from Phillips Petroleum Company,[4] Shamrock Oil and Gas Corporation, and Magnolia Petroleum Company. The actual amount to be included in Panhandle's cost of service for this escalation is dependent upon the final determination of all issues in this proceeding. On a contingent basis Opinion No. 269 reflected an increase in Panhandle's purchased gas costs in the amount of $919,295, representing a 23.31336 percent "spiral escalation". (13 FPC 104, Appendix I, Table 10).

All issues in this proceeding have now been determined. It is appropriate, therefore, that the "spiral escalation" be reduced and Panhandle recompute and apply the percentage escalation (approximately 14.5 percent) to its cost of gas purchased from the three producers during the respective rate periods from February 20, 1952, through December 31, 1954, utilizing the purchased gas vol-

umes contained in its report to the Commission filed July 25, 1961. (See Opinion No. 344–A).

The Commission finds:

(1) Upon reconsideration in accordance with the court's remand, Opinion No. 269–A, issued on April 27, 1961, as modified by the order denying rehearing, issued June 26, 1961, should be further supplemented by the additional findings and conclusions set forth above, and as so amended, should be adopted.

(2) Panhandle's petition to reopen this proceeding, filed April 19, 1963, is not in the public interest in carrying out the provisions of the Natural Gas Act and should be denied.

The Commission orders:

(A) The Commission's Opinion No. 269–A as heretofore modified and amended is hereby further amended to include the additional findings and conclusions set forth above, and as so amended is adopted.

(B) Panhandle shall within 45 days after the issuance of this order file with the Commission (and serve copies upon its customers, parties and interested State commissions) a report of its recomputations of its cost of purchased gas, cost allocations, jurisdictional cost of service, rates and recomputed revenues and refunds, including interest, as submitted on June 6, 1963, in accordance with Opinion No. 269–A as amended herein, subject to the Commission's approval.

(C) Any customer, party, or interested State commission may file objection to Panhandle's report within 10 days after Panhandle has filed its report pursuant to paragraph (B) above.

(D) Unless notified by the Secretary of the Commission prior thereto that its report is unacceptable, Panhandle, within 60 days from date of issuance of this order, shall make the additional refunds and interest payments to its jurisdictional customers in accordance with the report required by paragraph (B) above.

(E) Within 20 days after making refunds as required by paragraph (D) above, Panhandle shall file with the Commission and serve upon all parties a verified statement setting out that it has made the refunds of principal amount and interest to each customer as shown in the report filed pursuant to paragraph (B) above, together with proof of payment to each customer of amounts due.

(F) Panhandle's petition to reopen this proceeding filed on April 19, 1963, is hereby denied.

OPINION NO. 344–A

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. G–2506

MEMORANDUM OPINION AND ORDER DENYING PETITION TO REOPEN, MODIFYING AND ADOPTING PRIOR OPINION, AND DIRECTING REFUND OF EXCESS CHARGES

(Issued August 20, 1964)*

1. Commission *rejects* contention that only that portion of profit [revenues less cost] of extraction plant attributable to operations "beneficial" to pipeline should be credited to pipeline operations. P. 641.
2. Since instant case does not involve prospective ratemaking, there is no reason to reopen proceeding to give pipeline further opportunity of meeting burden of deviating from court-approved "normal" method of treating extraction operations, *i.e.* Commission treatment in *Opinion No. 344*. P. 641.

*Order issued October 15, 1964, denying rehearing and granting stay, 32 FPC 1123. Affirmed, *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 348 F. 2d 340 (CADC–1965) Cert. denied, 382 U.S. 944 (1965).

3. There is no basis for assuming that any of fixed costs of extraction operations were *not* attributable to facilities necessary or beneficial for pipeline's jurisdictional operations. P. 642.
4. In pipeline rate case, Commission must consider cost to jurisdictional rate payers of loss of cheap expansibility of downstream pipeline facilities resulting from use in transporting gas for "non-jurisdictional" extraction and the loss in Btu or heating value of gas stream resulting therefrom. P. 642.
5. Pipeline has not demonstrated any basis for Commission to deviate from normal practice of assigning all costs of extraction operations to pipeline cost of service and crediting all annual profits above a 5¾ percent return on investment in such facilities [the same afforded all other pipeline transmission] to cost of service. P. 642.
6. Since pipeline has failed to show that its method is based upon a proper relationship between criteria used (necessary extraction volumes) and costs which may fairly be attributed to pipeline cost of service, it has not justified a departure from Commission's "normal" method used in similar circumstances with judicial approval. P. 643.
7. Finding no "clear indication that the evidence offered . . . would likely lead to a different result", Commission *denies* petition to reopen proceedings. P. 644.
8. Commission *requires* pipeline to recompute the purchased gas costs escalation for period involved in accordance with method approved in Opinion No. 269. P. 644.
9. Upon court remand, Commission *modifies* and *adopts* prior opinion; *denies* petition to reopen and *directs* refunds.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

There remains before the Commission in this proceeding, upon court remand of our Opinion No. 344,[1] the issue involving the revenues received by Panhandle Eastern Pipe Line Company (Panhandle) from the extraction of gasoline and other liquids from natural gas prior to its entering the main transmission facilities, or during the gathering function of its business. More specifically, the liquid revenues in question are derived from operations at the Sneed, Texas, and Liberal, Kansas, extraction plants which are more fully discussed below. Since the rate period covered by this proceeding is that from January 1, 1955, through August 31, 1958, our consideration herein is for the purpose of fixing rates and refunds for a past, rather than a prospective, period.

In Opinion No. 344 the Commission adopted the treatment of the Presiding Examiner's decision in which he included all liquid extraction costs, including 5¾ percent return on investment in extraction facilities, and credited the net profits from such liquids to the pipeline cost of service. As we stated in Opinion No. 344, "Panhandle insists that the evidence presented by it, showing to what extent the extraction process was desirable, should limit the amount of revenue credited"; *i.e.*, only the revenue from that volumetric portion of extraction shown to be desirable (for increasing the efficiency of pipeline operations) should be allocated to the pipeline cost of service, and the remaining portion of the revenue should be allocated to its claimed "non-jurisdictional" extraction business. As a corollary to the allocation of extraction revenues, Panhandle recommends the allocation (between the pipeline and extraction

[1] *Panhandle Eastern Pipe Line Company*, Opinion No. 344, 25 FPC 787, Order Denying Rehearing, 25 FPC 1215; remanded in *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 305 F. 2d 763 (CADC 1962) certiorari denied 372 U.S. 916 (1963).

functions) of both extraction costs and the costs of the natural gas stream entering such extraction plants. These latter costs included all production and purchased gas costs and gathering costs.

Following the Commission's denial of Panhandle's application for rehearing, the company sought court review of Opinion No. 344 and order. The court in 1962, remanded the case to the Commission on the extraction issue, ". . . to reach an independent determination, in light of our opinion in the *City of Detroit* case, *as to whether* there should be an allocation of the extraction plant profits at Sneed and Liberal."[2] [Emphasis added.] The court expressed doubt as to whether the Commission had properly understood its earlier decision in that case,[3] which involved the same company and the same extraction plant operations as in this case, saying:

> . . . Indeed, there are strong indications that the Commission believed that *City of Detroit* requires, where extraction operations in some way improve the efficiency of a transmission system, that the entire extraction revenues be credited to the pipeline.

The court then gave its own interpretation of the law as made in that case. It said that *City of Detroit* would, under certain circumstances, permit the Commission to allocate costs between its pipeline and extraction operations, but that the Commission was hardly compelled to thus allocate costs and revenues.[4] The matter, it said, is within the Commission's reasonable discretion. We shall endeavor in this opinion to follow the views of the court as set forth in that decision, in the light of its 1962 decision.

1. *The Record Evidence*

The record shows that during the test year, the gas which Panhandle produced and purchased in the Panhandle and Hugoton Fields in Texas, was processed by Phillips Petroleum Company's Sneed, Texas, gasoline plant under a 1943 contract. The residue gas was delivered to Panhandle, and Phillips sold the gasoline and paid Panhandle for 58.8 percent of the extracted liquid at prevailing market prices. Phillips also provided a volume of its own residue gas equivalent to the volume of the shrinkage so as to equalize the outlet with the inlet gas volumes, passing through the plant. During the test year ending October 31, 1954 Panhandle received $517,578 from Phillips as its share of the liquid revenues.

The gas produced and purchased by Panhandle during the test year in the Hugoton Field in Oklahoma, and in Kansas, was processed in Panhandle's own hydrocarbon extraction plant at Liberal, Kansas. For all liquids sold during the test year, Panhandle received total Liberal plant revenues of $1,007,993 and had total extraction operation costs of $587,114, a net profit of $420,879. These extraction operation costs included, in addition to extraction plant costs, an allocated share of the costs of producing, purchasing, gathering, and transporting the shrinkage volumes of gas to the Liberal Plant.

In his testimony, Panhandle's engineering witness explained the manner and extent to which extraction of gasoline aided pipeline operations. He testified that hydrocarbons (mainly gasoline) contained in natural gas condense into

---

[2] Panhandle's petition to reopen (*infra*, p. 643) cites the West Publishing Company's head note of the court's opinion (305 F. 2d 763), stating that the case was remanded "for a determination of the proper allocation of revenues from hydrocarbon and gas extraction . . ." This is obviously not an accurate restatement of the court's language quoted correctly above and, therefore, is of no effect. *Burbank* v. *Ernst*, 232 U.S. 162 (1914). The question is *whether* such an allocation of extraction costs should be utilized. *Mid-America Pipeline Co.* v. *F.P.C.* 330 F. 2d 226 (CADC–1964).

[3] *City of Detroit, Michigan,* v. *F.P.C.*, 230 F. 2d 810 (CADC, 1955), certiorari denied, 352 U.S. 829, rehearing denied, 352 U.S. 919 (1956).

[4] *Mid-America Pipeline, supra*, fn.[2], at pages 228–229 and fn.[4]

liquids when the temperature of the gas (governed mainly by ground temperatures, except as affected by compression of the gas from station to station) declines below the hydrocarbon dew point of the gas at any particular operating pressure. When such ground temperatures occur, the liquids tend to form on pipe walls and settle in low points of the pipeline. As they form on pipe walls, the liquids move more slowly than the gas and absorb some pressure and energy. The formation of liquid pools at low points in the pipeline reduces total flow capacity and operating pressure.

Panhandle's witness presented a study based upon certain assumed constant factors, including composition of the gas, pressure at various points along the pipeline, minimum temperatures and the dew points at which liquids would be formed. As a result of these computations, he concluded that most of the volumes extracted at the Sneed and Liberal plants must be characterized as "superfluous in the sense that the operations are carried on in summer months when not required to insure that liquids will not form in the lines. He testified that during the test year only 499,207 gallons out of 23,653,457 (2.11 percent) actually extracted at Sneed would have had to be removed from the gas during four coldest winter months to avoid condensation, and, that at Liberal, only 1,897,098 gallons out of 20,048,918 (9.47 percent) would have had to be removed during seven coldest months.

From the study thus presented, Panhandle's witness concluded that the extraction plants were operated for two purposes—for the sale of hydrocarbons at an unregulated profit, and for the protection of the pipeline service. Upon the basis of its witness's conclusions in this regard, Panhandle contends that only that portion of the profit (revenues less costs) of the extraction plants which is attributable to operations "beneficial" to the pipeline should be credited to pipeline operations.

On the basis of his analysis, Panhandle's witness credited the pipeline cost of service with the total amount of $314,875. Of that amount, $112,842 resulted from his calculations of net profits at Sneed Plant, and $202,033 at Liberal Plant. Allocating 88 percent of this amount to jurisdictional sales, the end result of his calculations was a credit to the jurisdictional cost of service in the amount of $277,000.

The net profit of $112,842 allocated at Sneed Plant was the sum of two amounts, $10,921 and $101,921. The amount of $10,921 is 2.11 percent of Panhandle's share of the gasoline revenues ($517,578) obtained by Phillips from sale of gasoline extracted from Panhandle's gas. Panhandle's share of the total liquid revenues was $619,714, or 58.8 percent of $1,053,935, but Panhandle's witness excluded $102,136 of revenues from the sale of extracted butane and propane on the theory that their removal did not benefit the transportation of natural gas. The remaining credit in the amount of $101,921 resulted from the witness's allocations to the "superfluous" extracted liquids of a portion of the cost of the gas at the plant inlet. The allocation of gas supply and gathering costs was on a volumetric basis and the allocation of the cost of transporting those volumes to the plant was a segregated-facilities allocation utilizing selected capacity factors, assuming constant pressure, temperature and specific gravity.

The net profit of $202,033 allocated at Liberal Plant was, likewise, the sum of two amounts, $31,638 and $170,395, of which the former was computed in a somewhat different manner from that at Sneed. The amount of $31,638 is 9.47 percent of the net profits (gasoline revenues less cost of extraction plant operations) obtained by Panhandle from its own sale of gasoline extracted at Liberal Plant. Panhandle's witness testified that the total liquid revenues at Liberal Plant were $1,007,983, and the total extraction plant operation cost was $587,114, leaving a net profit for all liquids of $420,879. Of this latter amount, on the basis of

proportions of liquid revenues, he allocated 20.63 percent, $86,796 to propane and butane, whose removal, he testified, was not "beneficial" to transportation of natural gas. Of the remaining net profit attributable to gasoline, $334,083, the witness allocated 9.47 percent, $31,638, to the pipeline cost of service, together with $170,395 as an allocated portion of the cost of gas at plant inlet attributable to the "superfluous" gasoline (gas supply, gathering and transmission costs, in the same manner as at Sneed Plant).

The presiding Examiner's treatment of these extraction costs and revenues followed the Commission's court-approved method. This method was adopted, as modified by the Commission, in Opinion No. 344. It includes all extraction operations costs, in the amount of $403,209, and credits the combined total revenues from both plants, in the amount of $1,627,707, to that cost of service. The extraction costs include return on extraction plant investment at 5¾ percent (the allowed rate of return on overall pipeline investment), income taxes, depreciation, maintenance, wages, salaries and other operating expense attributable to the extraction operations. Unlike Panhandle's method, since no recognition is given to extraction as a "separate" business, no allocation is made of production, gathering and other costs of gas at the plant inlet. The Examiner's treatment resulted in a net revenue credit of $1,224,498, of which approximately 88 percent, or $1,077,000 was then allocated to reduce the jurisdictional cost of service. Thus, the reduction in Panhandle's jurisdictional cost of service found by the Examiner as approved by the Commission was approximately $800,000 more annually than the $277,000 figure proposed by Panhandle.

These computations of the effect upon the jurisdictional cost of service of the gasoline extraction issue have been somwhat altered by Panhandle's computations submitted July 25, 1961, in accordance with Opinion No. 344, as approved by the Commission's order issued May 7, 1963. Panhandle's July 1961 computations, by reflecting the costs and volumes found in Opinion No. 344, reduced the net credit to the pipeline cost of service from the $1,224,498 found by the Examiner, to $1,201,808. Moreover, Panhandle claimed that the operable figures utilizing its allocation bases were likewise changed from the net credit of $314,875 presented in hearing, to $234,916. The Commission's order issued May 7, 1963 required Panhandle to make refunds to reflect the cost of gas produced (elimination of its claimed commodity value for such gas) and permitted Panhandle to compute the gasoline extraction credit on the basis of the annual amount, $234,916, subject to its later determination which is made herein. Thus, the annual amount now in issue is a difference of $966,892 in the pipeline cost of service, and (at 88 percent), a difference of approximately $850,865 in the jurisdictional cost of service.

2. *Discussion*

Panhandle's contentions were briefly summarized and disposed of by the court in its 1962 opinion:

> Finally, Panhandle argues that the Commission should not have credited *all* of the revenues from the Liberal and Sneed hydrocarbon and gas extraction plants to the pipeline cost of service, and that only that proportion of the extraction business which improves the pipeline's efficiency should be credited to the pipeline business.
>
> Put another way, Panhandle seems to claim:
>
> . . . (1) that extraction operations which improve pipeline efficiency must be treated as within the Commission's jurisdiction, while those that do not should be treated as non-jurisdictional, and (2) that when jurisdictional and non-jurisdictional operations use the same facilities, the operating cost of these facilities should be allocated between them.

We have found no real authority for these propositions advanced by Panhandle. On the contrary, the treatment of the extraction revenues here utilized by the Commission has been followed in numerous cases.

* * * * * * *

In sum, crediting revenues such as those in issue to the operating expenses of the pipeline business is the "normal" and judicially approved method employed by the Commission.

However, as we pointed out above, the court expressed doubt that the Commission had properly understood and applied the court's earlier decision in *City of Detroit*. In remanding the matter to the Commission, the court gave its own interpretation of its earlier decision as follows:

There is little doubt that the *City of Detroit* decision would, under certain circumstances, *permit* the Commission to allocate costs among a company's pipeline and extraction operations. But the Commission is hardly *compelled* to make such an allocation. We construe the *City of Detroit* case as not foreclosing the question of allocation as a matter within the Commission's reasonable discretion. [Emphasis added]

Thus, it is clear from the court's language that it rejected Panhandle's position that the Commission *must* allocate extraction costs and revenues between its pipeline and its claimed "separate" or "superfluous" extraction business. It is also clear that, the Commission is permitted, in the reasonable exercise of its discretion under the Natural Gas Act, either to make some type of allocation or to adhere to the "normal" court-approved method of including all extraction costs and of crediting all extraction revenues to the pipeline cost of service. It was for the purpose of insuring that the Commission had exercised its discretion that the court remanded the matter to us.

Upon further consideration of all the facts and circumstances herein, we have concluded that Panhandle has failed to provide a method which would fairly allocate the extraction costs and revenues between pipeline and "superfluous" extraction operations, and that the record does not provide any other basis for making any such allocation, or even for determining that such other allocation would have been appropriate. Since this case is not one involving prospective ratemaking we see no reason for reopening the proceeding to give Panhandle a further opportunity of meeting the burden of deviating from the court-approved "normal" method of treating extraction operations, *i.e.*, the way we, in fact, treated them in Opinion 344.

Panhandle bases its allocation method upon the evidence it introduced showing that not all the liquids extracted from the natural gas stream passing through the Sneed and Liberal plants improve the pipeline's efficiency. As we have more fully set forth above, its engineering witness made calculations and testified that only relatively small percentages (2.11 percent at Sneed, and 9.47 percent at Liberal) of the *annual* volumes of gasoline extracted were needed to be removed to avoid condensation, drag and line blockage. Relying upon such facts, Panhandle contends that only a similar portion of the profit from such extraction operations and sales of extracted liquids should be credited to the pipeline cost of service. This conclusion does not follow and is not supported by the evidence.

As indicated above, the necessary or beneficial extraction takes place during the cold winter periods. Thus, during the five warmer months Panhandle assigned none of the extraction volumes to beneficial purposes, whereas during the other seven months it assigned portions of the gasoline extracted to beneficial purposes which cumulatively totaled 2.11 and 9.47 percent, respectively, of the total annual gasoline volumes produced at Sneed (23,653,457 gallons) and at Liberal (20,048,918 gallons). Upon cross-examination, Panhandle's engineering witness testified that at the lowest dew point experienced (underground tempera-

tures at which liquids condense at 600 pounds pressure) of 32° Fahrenheit it would be desirable to maintain extraction operations at the rate of 0.0068 gallon of gasoline per 1,000 Mcf of gas processed. Applying that rate to the total volume of gas processed in the week of maximum extraction (February 1–S, 1956) 1,717,592 Mcf, the maximum weekly beneficial extraction, according to the witness, would have been 114,735 gallons. On days warmer than 32° F., lesser extraction rates would be applicable. How this extraction rate compares with the actual extraction was never shown, nor was the percentage shown of such maximum weekly extraction which he deemed to be "beneficial".

These figures, however, do not tell the entire story, for the maximum beneficial utilization of the extraction plants cannot be determined by any weekly or even daily percentage. Obviously, the maximum utilization of the two plants would occur during the coldest hours of the coldest days of the year. That this maximum might well approximate 100 percent is indicated by the testimony of Panhandle's own witness who with respect to the Sneed Plant testified, "[i]f only 2.11 percent had been removed, there would not have been any profit on the operation because the costs would not have been very much less than they were . . ."

Accordingly, there is no basis in this record for assuming that any of the fixed costs of the extraction operations were *not* attributable to facilities necessary or beneficial for the pipeline's jurisdictional operations. Nor can it be contended that an allocation could be made on this record because there may have been variable extraction costs clearly not assignable to pipeline operations. Not only is the record completely barren of any evidence upon which such costs could be calculated, there is not even proof that such severable variable costs exist in any significant amount.

Thus, there is no basis for assuming that save for non-jurisdictional considerations the extraction facilities could or would be shut down during the summer months or operated at lesser cost in other periods. On the contrary, Panhandle's witness testified that extraction plants are designed to be, and are, operated on a relatively stable basis the year around, and as a technical matter, should not be operated on a fluctuating or unstable basis.

Finally, there is another significant factor which Panhandle has not taken into account. This is the cost to its jurisdictional rate payers of the loss of cheap expansibility of downstream pipeline facilities resulting from the utilization of such facilities for transporting gas for any "non-jurisdictional" extraction at the two plants and for the loss in Btu or heating value of the gas stream as a result of the extraction operations.[5] That this is a factor which must be considered by the Commission in a pipeline's rate case has only recently been expressly reaffirmed by the District of Columbia Circuit Court of Appeals in the appeal from the most recent *Northern Natural* rate case.[6]

In view of all of these considerations, we conclude that Panhandle has not demonstrated any basis for our deviating from our normal practice of assigning all costs of the extraction operations to its pipeline cost of service and crediting all annual profits above a 5¾% return on investment in such facilities (the same return afforded all other pipeline transmission property) to its cost of service.

In further support of its claim that the Commission should adopt its allocation method, Panhandle contends that "[t]he profit from the excess or superfluous operations should inure solely to the benefit of the stockholders, as they

[5] At the Sneed Plant, in effect, Phillips reimburses Panhandle for such loss, but under the latter's theory over 97% of this sum is kept by the company.

[6] *Mid-America Pipeline Co.* v. *F.P.C.*, 330 F. 2d 226 *supra*, at pp. 229–230 (CADC), affirming *Northern Natural Gas Company*, Opinion No. 374, 28 FPC 1155, 1160; 29 FPC 450, 451.

would have been required to bear the loss if the [gasoline] price had been so low that the revenues were less than the cost of carrying out the operation." The answer is that Panhandle's stockholders would have the risk of loss only if we agreed with its theory that the major portion of costs and revenues should be attributed to the excess liquids as a "separate business". Especially since its own witness admitted that the extraction operations should be carried on "even though you had to throw the [extracted] material away", and that the extraction costs "would have been a proper component of the cost of service" even "if the price of gasoline had been low", we cannot agree that the responsibility for these costs should be borne by the stockholders.[7]

To agree with Panhandle would leave the stockholders responsible for the cost of maintaining essential pipeline operations, an obviously erroneous result. Since it is recognized that the necessary extraction should be undertaken even at a loss the pipeline phase of the business should be treated as responsible for the costs and corollary revenues attributable thereto. This would leave the stockholders with no risk of loss other than that involved in its normal opportunity to earn a regulated rate of return.

Upon our reconsideration of all these facts and circumstances, we have concluded that Panhandle has failed to show that its method is based upon a proper relationship between the criteria used (necessary extraction volumes) and the costs which may fairly be attributed to the pipeline cost of service. Consequently, Panhandle has failed to justify a departure from the Commission's "normal" method utilized in similar circumstances in the past with full court approval.

3. *Panhandle's Petition to Reopen Proceedings*

On April 19, 1963, Panhandle filed a petition for opportunity to present additional evidence as to the extraction issue remanded by the court. In view of the nature of the court's remand and Panhandle's long drawn out efforts on this issue, we have given first consideration to the evidence of record before determining whether the record should be supplemented. We are mindful of the fact that Panhandle was allowed a general reopening of its case on this issue by the Presiding Examiner in 1956, following the *Detroit* remand. Moreover, the company sought and was allowed a second reopening for the "commodity value" issue in 1960.

As the Commission has stated before in rulings upheld by the courts, "there must be an end to administrative proceedings" such as this,[8] and it should be kept in mind that "a party who tries and fails to make a *prima facie* showing to support severable elements of his claim is [not] entitled to a postponement of adjudication thereon."[9] Having tried its case on one theory and failed to satisfy the Commission and the court, Panhandle is not entitled to try the case on a new theory.[10]

Nevertheless, since the exercise of discretion upon a petition to reopen is particularly within the province of the Commission,[11] we have given consideration

---

[7] Panhandle's engineering witness admitted upon cross-examination that under certain operating conditions a certain percentage of extraction operations are required for proper operating efficiency, to "prevent dramatic interruptions of service", and should be carried on "even though you had to throw the [extracted] material way." These statements are contrary to the Commission's finding urged by the company, in Opinion No. 269, remanded by *City of Detroit*, that "Panhandle would be able to discontinue the extraction of gasoline without incurring serious operating difficulties." 13 FPC 77.

[8] *Colorado Interstate Gas Company*, Opinion No. 313, 19 FPC 1012, 1017.

[9] *Panhandle Eastern Pipe Line Company* v. *F.P.C.* 236 F. 2d 606, 608 (CA3, 1956).

[10] *Automatic Canteen Company* v. *F. T. C.*, 194 F. 2d 433, 439 (CA7, 1952).

[11] *Interstate Commerce Commission* v. *Jersey City*, 322 U.S. 503, 514–515; *cia Mexicana de Gas, S.A.* v. *F.P.C.*, 167 F. 2d 804, 808.

to the petition to reopen and conclude that in the words of the *Detroit* opinion (affirming the Commission's refusal to reopen that proceeding), there is no "clear indication that the evidence offered . . . would likely lead to a different result." [12]

The petition fails to specify what kind of evidence would be offered and fails to allege what Panhandle would show. Panhandle does not show how it plans to meet the requirements of the court's two opinions in its attempt to justify utilization of an allocation of extraction costs and revenues. Instead, the petition merely recites some of the inadequacies of its evidence which were pointed out in the Commission's brief before the court. Moreover in the light of the discussion above we cannot, with any assurance, find that further evidence would be likely to provide a fair method of allocation and appropriate justification for failing to credit the revenues. Of course, in a subsequent rate case Panhandle may attempt to make an adequate showing in conformity with the views expressed herein. But it would be inappropriate to reopen this proceeding dealing with a long-past locked-in period, with no assurance of the result.

4. *Purchased Gas Cost Escalation*

As we pointed out in our order of May 7, 1963, until we finally determined all issues in G–1116, we could not finally and completely determine Panhandle's cost of service in G–2506. The reason is that in Opinion No. 269, in the prior proceeding, we allowed Panhandle a 23.31336 percent resale price escalation of the cost of gas purchased from Phillips Petroleum Company, Shamrock Oil and Gas Company, and Magnolia Petroleum Company. This escalation was allowed as one having occurred prior to our taking jurisdiction over independent producers, and is applicable to gas purchased in both G–1116 and G–2506. However, since the formula for computing the escalation is based upon the 1952 increase in Panhandle's cost of service over prior rates, the exact percentage could not be computed until we finally determined, as we have this date in both G–1116 and G–2506, all issues including the gasoline revenue extraction issue. We shall, therefore, require Panhandle to recompute the escalation to be allowed in this proceeding in accordance with the method utilized in Opinion No. 269 (Appendix I, Table 10).[13]

The Commission finds:

(1) Upon reconsideration, in accordance with the court's remand of the Commission's Opinion No. 344, issued herein on April 27, 1961, as modified by the Commission's order denying rehearing, issued June 26, 1961, the opinion should be further supplemented by the additional findings and conclusions set forth above, and as so amended, should be adopted.

(2) Panhandle's petition to reopen this proceeding filed April 19, 1963 is not in the public interest in carrying out the provisions of the Natural Gas Act, and should be denied.

The Commission orders:

(A) The Commission's Opinion No. 344, as amended by its order denying rehearing, is hereby further amended to include the additional findings and conclusions set forth above, and as so amended is adopted.

(B) Panhandle shall within 45 days after the issuance date of this order file with the Commission (and serve copies upon its customers, parties and interested State commissions), a report of its re-computation of its purchased gas cost, allocations, jurisdictional cost of service, rates, and re-computed revenues and

---

[12] *City of Detroit, supra,* Page 822; *I.C.C. v. Jersey City, supra.*

[13] Rough calculations indicate the escalation should be approximately 14.5 percent instead of 23.31336 percent. See our reservation of this issue in *Phillips Petroleum Company,* Opinion No. 338, 24 FPC 537.

resulting refunds, including interest, as submitted on June 6, 1963, in accordance with Opinion No. 344, as amended herein, subject to the Commission's approval.

(C) Any customer, party, or interested State commission may file objection to Panhandle's report within 10 days after Panhandle has filed its report pursuant to paragraph (B) above.

(D) Unless notified by the Secretary of the Commission prior thereto that its report is unacceptable, Panhandle, within 60 days from date of issuance of this order, shall make the additional refunds and interest payments to its jurisdictional customers in accordance with the report required by paragraph (B) above.

(E) Within 20 days after making refunds as required by paragraph (D) above, Panhandle shall file with the Commission and serve upon all parties a verified statement setting out that it has made the refunds of principal amount and interest to each customer as shown in the report filed pursuant to paragraph (B) above, together with proof of payment to each customer of amounts due.

(F) Panhandle's petition to reopen this proceeding filed on April 19, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, DOCKET NO. E-7167; CALIFORNIA ELECTRIC POWER COMPANY, DOCKET NOS. E-6351 AND E-6223

ORDER AUTHORIZING AMENDMENT OF PERMIT CHANGING NAME OF PERMITTEE, ELIMINATING CERTAIN FACILITIES AND TERMINATING FORMER ORDER AUTHORIZING EXPORTATION TO MEXICO

(Issued August 20, 1964)

By order issued December 20, 1956, in Docket No. E-6351, 16 FPC 1363, and subsequently supplemented by orders issued July 21, 1958, 20 FPC 61, and December 31, 1958, 20 FPC 886, California Electric Power Company was authorized, pursuant to Section 202(e) of the Federal Power Act, to export electric energy to Industrial Electrica Mexicana in Mexico. The transmission of the electric energy for exportation was authorized to be made over facilities on the international boundary between Mexico and the United States located in or near Calexico, California, Andrade, California and Gadsden, Arizona, respectively as specified in a Presidential Permit signed by the President of the United States on November 5, 1949 and subsequently amended by amendments dated April 6, 1956 and June 23, 1958, in Docket No. E-6223.

By order issued October 1, 1963, 30 FPC 942 (Docket No. E-7106), the Commission authorized the merger of California Electric Power Company with Southern California Edison the latter to be the surviving corporation.

On May 28, 1964, Southern California Edison Company filed an application, Docket No. E-7167, in which it advised the Commission that the contract for the supply of power to Industrial Electrica Mexicana terminated on December 31, 1963 and no other arrangements were made to export power inasmuch as the Mexican utility now relies wholly upon its independent sources of generation. Furthermore, all of the border facilities heretofore used by California Electric Power Company under its Presidential Permit have been removed except for one 161 kv line located at the International Boundary near Andrade, California, 3 feet east of Monument No. 206.

In its application, Southern California Edison requests that the name of the Permittee be changed to Southern California Edison Company and states that

it wishes to maintain the 161 kv border facilities near Andrade, California, so that it may be available for use by California Edison or others if future arrangements are made for deliveries of power to or from Mexico, and points out that any such arrangements which would be within the Commission's jurisdiction would not be made without prior approval by the Commission.

The Commission finds:

(1) Under the circumstances related above, the Commission's order in Docket No. E-6351 authorizing California Electric Power Company to export power to Mexico should be terminated.

(2) Amendment of the Presidential Permit, issued in Docket No. E-6223 to reflect the change of name of the Permittee, California Electric Power Company by reason of its merger with Southern California Edison Company will not be inconsistent with the terms of the Permit.

(3) Good cause has been shown that the Presidential Permit should be further amended to eliminate authorization to maintain all facilities on the international boundary between Mexico and the United States except the 161 kv facilities located near Andrade, California.

The Commission orders:

(A) The Commission's order issued December 20, 1956 in Docket No. E-6351 as amended by orders issued July 21, 1958, and December 31, 1958 authorizing California Electric Power Company to export electric energy to Mexico is hereby terminated.

(B) The Presidential Permit signed by the President of the United States on November 5, 1949 in Docket No. E-6223 and subsequently amended shall be further amended to: (1) change the name of the Permittee from California Electric Power Company to Southern California Edison Company, and (2) modify Article 2 of the Permit by eliminating reference to all facilities except the 161 kv facilities located near Andrade, California on the international boundary.

(C) Nothing in this order shall be deemed to constitute authorization or approval to export electric energy to Mexico by means of the facilities authorized to be maintained by the Presidential Permit referred to above without prior approval by the Commission pursuant to Section 202(e) of the Federal Power Act.

(D) No importation of electric energy by means of the facilities authorized to be maintained by the Presidential Permit referred to above shall be made without first notifying the Commission in writing of the amount to be imported and the terms and conditions of such importations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. RP64-16

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT, PRESCRIBING REFUNDS AND TERMINATING PROCEEDINGS

(Issued August 21, 1964)

This matter relates to a rate proceeding arising from proposed changes in rates, charges, classifications and services tendered for filing [1] by Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska) on January 31, 1964, pursuant to Section 4 of the Natural Gas Act. By order issued March 13, 1964, a public hearing was ordered, the revised tariff sheets were suspended and the use thereof deferred until August 17, 1964, or until such time as they may be made effective in the manner prescribed by the Natural Gas Act.

Conferences between Kansas-Nebraska, the Commission Staff and the parties to the proceeding were held on July 1, and July 13, 1964. As a result of these conferences, all parties present have agreed, subject to the Commission's approval, to a settlement of this proceeding and all issues involved herein. No objections have been received from any parties to the proceeding or customers of Kansas-Nebraska.

On July 14, 1964, Kansas-Nebraska filed a document entitled "Stipulation and Agreement to Terminate Proceedings" (Stipulation), and revised tariff sheets, with the Commission and served copies thereof upon all interested parties to the proceeding. Briefly summarized, the proposed Stipulation provides, in part, as follows:

(1) An agreed-upon jurisdictional cost of service to the Nebraska customers of $5,108,838, which results in a rate increase of $352,756.

(2) Revised tariff sheets to be accepted for filing by the Commission which reflect a commodity level of 23¢ per Mcf and a demand level of 6.25¢ per Mcf of billing demand per day.

(3) Changes in the billing demand to reflect 100 percent of the contract demand for the months of November, December, January, February and March; 80 percent of the contract demand for the months of April, May, September and October; and 60 percent of the contract demand for the months of June, July and August.

(4) Elimination of the clause in the rate schedule which automatically increased purchaser's contract demand when overrun gas was taken, and substituting therefor a penalty clause of $2.00 per Mcf for the first 50 Mcf or 3 percent of the contract demand, and $10.00 per Mcf for all additional gas taken above the contract demand when complete curtailment orders were in effect on the system.

(5) Group billing will be available to certain customers.

(6) A moratorium for the filing of any rate increase by Kansas-Nebraska for one year from the date of either approval of the settlement agreement, or August 17, 1964, whichever date is later.

We note that the Stipulation makes no reference to the pass-through of refunds received by Kansas-Nebraska from its suppliers and to give effect in its

[1] First Revised Sheet Nos. 6, 8, 8A, 8B, 8C, 8D, 8E and 10A; Second Revised Sheet Nos. 2, 3 and 7; and Third Revised Sheet Nos. 4, 5 and 9 to its FPC Gas Tariff, First Revised Volume No. 1.

rates to any rate reductions put in effect by its suppliers. It has been the consistent practice to require such refund and rate reduction provisions in settlement agreements approved and accepted by the Commission. Accordingly, we shall condition our acceptance of this Stipulation to provide for refunds and rate reductions. However, in order to avoid multiple minimal refunds and filings reflecting reductions in future rates, Kansas-Nebraska shall not be required to flow-through refunds which it receives from its suppliers, or make effective rate reductions passed on by said suppliers until they have accumulated to an aggregate of one-tenth of one cent per Mcf.

The Commission finds:

(1) The settlement of the proceeding in Docket No. RP64–16 on the basis of the Stipulation filed with the Commission on July 14, 1964, is appropriate and in the public interest in carrying out the provisions of the Natural Gas Act and should be approved and made effective subject to the terms and conditions hereinafter provided and ordered.

(2) The increased rates and charges contained in the Kansas-Nebraska filing in this docket and which was the subject of this proceeding have not been shown to be just and reasonable, or otherwise lawful under the Natural Gas Act and should be disallowed and denied.

The Commission orders:

(A) The proposed increased rates and charges contained in the Kansas-Nebraska filing in this docket as hereinabove set forth be, and the same are disallowed and denied.

(B) The settlement of this proceeding, upon the basis set forth in the Stipulation, is approved and made effective as proposed therein, subject to the terms and conditions herein ordered.

(C) The 30-day notice provision of Section 154.22 of the Commission's Regulations under the Natural Gas Act is hereby waived and within 10 days of the issuance date of this order, Kansas-Nebraska shall tender to the Commission for filing, revised tariff sheets acceptable to the Commission, reflecting the changes contemplated by the Stipulation to be effective as of August 17, 1964.

(D) The acceptance of the Stipulation is conditioned to provide that Kansas-Nebraska, subject to the approval of the Commission, shall pass on to its jurisdictional customers, the proportionate share of any refunds it receives from its suppliers. It shall pass such refunds on to its customers within 30 days after they have accumulated in the manner prescribed above.

(E) The acceptance of the Stipulation is further conditioned to provide that Kansas-Nebraska, subject to the approval of the Commission, shall make such reductions in its rates as are made to it by its suppliers. It shall, within 30 days of such rate reductions having accumulated in the manner prescribed above, make appropriate tariff filings reflecting these reductions with this Commission, and serving a copy thereof upon each of its jurisdictional customers and interested State commissions.

(F) Within 20 days of making any refund herein, Kansas-Nebraska shall report to the Commission, in writing, and under oath, the amount of refund to each customer, together with a computation showing the manner in which such refund was determined. Kansas-Nebraska shall concurrently serve a copy of this report upon each customer and interested State commissions, and shall submit to this Commission a copy of the release signed by each customer acknowledging receipt of the amount refunded.

(G) Kansas-Nebraska shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of issuance of this order, in

writing and under oath, an original and one copy of its acceptance or rejection of the terms and conditions of this order.

(H) Upon full compliance by Kansas-Nebraska with the terms and provisions of this order and of the Stipulation, this proceeding shall be deemed terminated, subject only to the continuing obligation to make suppliers' refunds and to pass on supplier rate reductions pursuant to Paragraphs (D), (E) and (F).

(I) This order is without prejudice to any findings or orders which have been, or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, Kansas-Nebraska, the Commission Staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Kansas-Nebraska Natural Gas Company, Inc., or any other persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

E. W. CAMPBELL (OPERATOR), ET AL., DOCKET NO. RI64-688; PEARL G. CAMPBELL, DOCKET NO. RI64-716; PEARL G. CAMPBELL, ET AL., DOCKET NO. RI64-717

ORDER DENYING MOTIONS FOR RECONSIDERATION

(Issued August 24, 1964)

On April 20, 1964, E. W. Campbell (Operator), *et al.*, (Operator) tendered for filing a letter[1] requesting reconsideration of the order issued April 10, 1964, in Docket No. RI64-688. On May 22, 1964, Pearl G. Campbell and Pearl G. Campbell, *et al.*, (Campbell) tendered for filing a letter[1] requesting reconsideration of the order issued May 6, 1964, in Docket Nos. RI64-716 and RI64-717. Both of these orders suspended proposed increased rates as hereinafter described.

All of the proceedings relate to the jurisdictional sales of natural gas to Northern Natural Gas Company (Northern) from the Hugoton Field, Kearny County, Kansas. The proposed increased rates, designated as Supplement No. 1 to Operator's FPC Gas Rate Schedule No. 4 and Supplement Nos. 3, 1, 1, and 1 to Campbell's FPC Gas Rate Schedule Nos. 1, 2, 3, and 4 respectively, were suspended for the statutory five-month period by orders issued April 10 and May 6, 1964 in the above proceedings.

In support of the motion in Docket No. RI64-688, Operator states that the Btu content of the gas is 925, and that like increases have been granted to others under similar circumstances. In support of the motion in Docket Nos. RI64-716 and RI64-717, Campbell states that they were contractually entitled to the increased rate on February 28, 1963, and that the Commission has granted similar increases without suspension, citing rate filings under Anadarko Production Company (Anadarko) FPC Gas Rate Schedule No. 38, and Ben F. Brack FPC Gas Rate Schedule No. 2, which were accepted in February, 1961, and May, 1959, respectively.

The previous acceptance of increased rates identical to those presented here does not preclude suspension of the instant rates when there is sound justification for doing so as indicated below. Cf. *F.C.C.* v. *Pottsville Broadcasting Company*, 309 U.S. 134, 145 (1940); *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 236 F. 2d 289 (3rd Cir., 1956).

[1] These letters are construed as motions for reconsideration.

The presently effective rate in Docket No. RI64–688 is 10.4458¢ per Mcf, at 14.65 psia. The rate includes a base rate of 11.0¢ per Mcf less a downward Btu adjustment for gas containing less than 925 Btu's. No change is proposed in the 11.0¢ per Mcf base price, but the suspended filing amends the contract to eliminate any reduction in price for gas containing less than 925 Btu's. Although Operator stated that the gas contains 925 Btu's it is apparent from the filing showing increased annual revenues that the actual Btu content is lower, so that the rate for 925 Btu gas would exceed the 11.0¢ per Mcf area ceiling price for increased rates as set forth in the Commission's *Statement of General Policy, No. 61–1*, as amended [18 CFR, Chapter I, Part 2, Section 2.56].

The presently effective rates in Docket Nos. RI64–716 and RI64–717 are the same as that involved in Docket No. RI64–688, and Campbell proposes to eliminate the reduction in price for gas containing less than 925 Btu's. In these two proceedings, however, Campbell submitted actual test data showing the Btu content of the gas to be below 925. As in Docket No. RI64–688 the 11.0¢ minimum price for the subject gas would be equivalent to rates in excess of 11.0¢ per Mcf for 925 Btu gas.

The Commission finds:

The motions for reconsideration of the suspension orders issued in the above designated proceedings should be denied.

The Commission orders:

The motions for reconsideration of the suspension orders issued in the proceedings in Docket Nos. RI64–688, RI64–716 and RI64–717 are denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LAKE SHORE PIPE LINE CO., DOCKET NO. CP64–225

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1964)

On April 3, 1964, Lake Shore Pipe Line Co. (Applicant) filed in Docket No. CP64–225 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period following the date of certification and the operation of lateral and field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing transmission system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $100,000, with no single project to exceed a cost of $25,000, which costs will be financed by cash on hand, or by short-term loans.

Due notice of the subject application was published in the Federal Register on July 30, 1964 (29 F.R. 10630). No petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on August 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lake Shore Pipe Line Co., an Ohio corporation having its principal place of business in Cleveland, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 205 issued February 15, 1951, in Docket No. G–1210, *et al.* (10 FPC 22, 32).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in this transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period following the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $100,000, with no single project to exceed a cost of $25,000.

(8) Good cause appears for waiver of the cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lake Shore Pipe Line Co., to construct during the 12-month period following the date of issuance of this order, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted by paragraph (A) above is hereby limited to construction during the 12-month period following the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $100,000, with no single project to exceed a cost of $25,000.

(E) The cost limitations imposed by Section 2.58 of the Commission's Rules of Practice and Procedure, as amended, are hereby waived in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP64-307

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1964)

On June 24, 1964, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP64-307 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of: (1) approximately 19.7 miles of 4, 6 and 8-inch pipelines with connections and measuring stations at 17 gas wells located in the Pavillion and Muddy Ridge fields, and a dehydration plant; (2) approximately 20.7 miles of 10-inch gas transmission pipeline connecting with the facilities described in (1) above and extending to a connection with Applicant's 12-inch main transmission line; (3) approximately 8.8 miles of 4-inch pipeline, with meter station and dehydration plant, to connect the Dinty Moore field to Applicant's 12-inch main transmission line; and (4) approximately 2.9 miles of 4-inch pipeline, with meter station and dehydration plant, to connect the Howard Ranch field to Applicant's 12-inch main transmission line. All of the above described facilities will be located in Fremont County, Wyoming, as more fully described in the application.

The purpose of the proposed facilities is to receive and transport natural gas from wells in the various fields to supply Applicant's customers with greater gas reserves and provide for normal growth in Applicant's service area.

The estimated total cost of the proposed facilities is $1,284,200, which will be financed through internally generated funds and first mortgage bonds now in the process of issuance.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G-220 and G-402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Co., to construct and operate the subject facilities for the purpose stated, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP65-1

ORDER PROVIDING FOR HEARING, FOR PREHEARING CONFERENCE, AND SUSPENDING PROPOSED TARIFF SHEETS

(Issued August 24, 1964)

On July 15, 1964, United Gas Pipe Line Company (United), tendered for filing certain tariff sheets[1] to become effective September 1, 1964. The tariff sheets propose changes in the jurisdictional rates resulting in an estimated net increase of $2,390,230 over and above the increase proposed by United in Docket No. RP63-1.

In support of the proposed increase, and pursuant to Section 154.63 of the Regulations under the Natural Gas Act, United has submitted its studies, cost data and prepared testimony. Review of the filing indicates that the rates proposed

---

[1] Second Revised Sheet No. 9-A, Fifth Revised Sheet No. 99, Seventh Revised Sheet Nos. 34, 35, 44 and 45, Eighth Revised Sheet Nos. 8 and 14, Ninth Revised Sheet Nos. 4, 6, 10, 12, 21, 23, 25, 27, 28, 30 and 32, and Tenth Revised Sheet No. 100 to United's FPC Gas Tariff, First Revised Volume No. 1.

reflect certain questionable items in United's presentation, including *inter alia*, rate of return, working capital allowance, federal income tax allowance, shifts in purchase gas and sales patterns, depreciation reserve, and adjustments to operating expenses.

The increased rates and charges contained in United's FPC Gas Tariff as proposed to be amended herein, have not been shown to be justified and may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

In view of the fact that United has filed this major rate increase while its petition for rehearing of Commission decision in Docket No. RP63–1 is still pending, and since our preliminary analysis of the application indicates that a number of the contentions upon which United's claim for increased rates are closely related to matters which have been fully litigated in RP63–1, we believe that expeditious handling of the present application justifies deviation from the normal procedures set forth in Section 2.59 of our Rules. Specifically, we believe that this proceeding can be expedited by directing the examiner to hold an immediate prehearing conference rather than awaiting filing of direct evidence by the staff and interveners' and rebuttal evidence by United. It is hoped and expected that through such a conference, the examiner will be able to expedite the proceeding and give full and complete effect to the policies and intent expressed in Rule 2.59 and particularly subsections (f) and (j) thereof. Cf. *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 232 F. 2d 467, 473 (C.A. 3, 1956) Cert. den. 352 U.S. 891. If he deems it will aid in bringing this proceeding to a prompt solution, he is authorized to provide for early cross-examination of the applicant's direct case prior to the submission of the written evidence of the staff or interveners.

Staff Counsel filed a motion in Docket Nos. RP63–1 and RP65–1 entitled "Staff Counsels' Motion to Reject Proposed Rate Increase Filing" on August 6, 1964. Answers to this motion were filed on August 14 and 17, 1964 by United and other parties to these proceedings. This motion and the answers thereto raise important questions of law which deserve our full consideration which cannot be completed within the time within which, if the rate filing was properly filed under Section 4(d) of the Act, we would be required to suspend the filing or allow the increase to go into effect.

The Commission finds:

(1) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the rates and charges contained in United's FPC Gas Tariff, as proposed to be amended herein, and that the proposed tariff sheets listed above be suspended, and the use thereof be deferred as herein provided.

(2) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the disposition of this proceeding be expedited in accordance with the procedures set out below.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held on a date to be fixed by notice from the Presiding Examiner concerning the lawfulness of the rates, charges, classifications, and services contained in United's FPC Gas Tariff as proposed to be amended herein.

(B) Pending such hearing and decision thereon, United's proposed tariff sheets

listed above are hereby suspended and the use thereof is deferred until February 1, 1965, and until such further time as they may be made effective in the manner prescribed by the Natural Gas Act.

(C) Presiding Examiner Max L. Kane, or any other officer designated by the Chief Examiner for that purpose (see Delegation of Authority, 18 CFR 3.5(d)), shall prescribe other relevant procedural matters not herein provided, shall preside at the prehearing conferences and at the hearing in this matter, and shall control this proceeding in accordance with the policy expressed by the Commission in § 2.59 of its Rules of Practice and Procedure, especially paragraph (j) thereof.

(D) Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner shall commence at 10:00 a.m. (EST) on September 9, 1964, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., 20426, for the purpose of reaching such agreements as will expedite the determination to be made herein, including, but not limited to, stipulation of facts, narrowing and defining the issues, and establishment of dates for the service of testimony and for the cross-examination of all testimony.

(E) This order is without prejudice to such action as the Commission may deem necessary and proper with respect to the motion of Staff Counsel filed August 6, 1964 and the answers thereto filed August 17, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACKSVILLE OIL AND GAS COMPANY, DOCKET NO. CP64-200

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 25, 1964)

On March 9, 1964, as supplemented on May 6, 1964, Blacksville Oil and Gas Company (Applicant) filed in Docket No. CP64-200 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing The Manufacturers Light & Heat Company to continue its established physical connection of its transportation facilities with facilities of the Applicant, which are now connected upon an emergency basis, and to sell and deliver to Applicant a peak day volume of 84 Mcf of natural gas.

Applicant states that it is a public utility corporation under the laws of West Virginia and that it is now distributing and selling natural gas in the community of Blacksville, West Virginia, through its existing distribution system; that part of the gas supply is obtained from local gas producers; but such source of supply is not adequate to meet the demand for gas service in Blacksville and therefore public necessity requires that the additional supply of gas from The Manufacturers Light & Heat Company be made to continue upon a permanent basis and under Manufacturer's Rate Schedule (CDS-1).

Construction of new connecting facilities is not required since the existing connection is adequate.

On May 6, 1964, The Manufacturers Light & Heat Company filed its answer to the application, above mentioned, stating that it has no objection to rendering the requested service to Applicant, providing there be no requirement to deliver gas at a pressure in excess of 5 psig, which is the present delivery pressure. Applicant agrees to such condition of service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 4, 1964 (29 F.R. 11198). No protest, petition to intervene or notice of intervention in opposition to the granting of the applications has been filed.

The Commission finds:

(1) The Manufacturers Light & Heat Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–953 (4 FPC 44).

(2) Applicant, Blacksville Oil and Gas Company is a public utility corporation organized and existing under the laws of West Virginia and is authorized to engage in the business of distributing and selling natural gas within the said State and The Municipality of Blacksville, and Applicant is now distributing and selling natural gas in said community.

(3) It is necessary and desirable in the public interest that The Manufacturers Light & Heat Company be directed to continue to maintain and operate the physical connection of its natural gas transmission system at a point near Blacksville, Monongalia County, West Virginia, and to continue to sell to Applicant a maximum peak day volume of 84 Mcf, as set forth in the application in this proceeding and as hereinafter ordered and conditioned.

(4) The requirement that The Manufacturers Light & Heat Company continue to serve Applicant, as requested, will not place an added or undue burden upon it nor will it impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) The Manufacturers Light & Heat Company be and it is hereby directed to maintain the physical connection of its natural gas transmission system with Applicant's distribution system serving Blacksville, West Virginia, and to sell and deliver up to 84 Mcf of natural gas per day to Applicant to augment the supply of gas from local gas production.

(B) Applicant, Blacksville Oil and Gas Company, shall execute with Manufacturers and file with the Commission an appropriate service agreement under Manufacturers' Rate Schedule CDS–1, in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Manufacturers shall not be obligated to deliver natural gas to Applicant at a pressure in excess of 5 psig.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXACO INC., DOCKET NO. RI60–134

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, AND TERMINATING PROCEEDING

(Issued August 25, 1964)

On June 19, 1964, Texaco Inc. (Texaco) submitted an offer of settlement in the above-designated proceeding, involving the jurisdictional sales of natural gas under Texaco's FPC Gas Rate Schedule Nos. 52, 53, and 99 to Hugoton Plains Gas and Oil Company (Plains) from the Hugoton Field, Seward County, Kansas (Kansas Area) and Texas County, Oklahoma (Oklahoma Panhandle Area). Plains gathers and processes the gas in its Tyrone Gasoline Plant and resells the residue gas to Northern Natural Gas Company (Northern).

The presently effective rate is 19.0426¢ per Mcf at 14.65 psia under Texaco's FPC Gas Rate Schedule No. 53, and 19.0688¢ per Mcf at 14.65 psia under Texaco's FPC Gas Rate Schedule Nos. 52 and 99. These increased rates have been in effect subject to refund in Docket No. RI60–134 since April 25, 1960. Texaco's rates are based on a revenue sharing arrangement with Plains whereby Texaco is entitled as a contractual matter to receive a rate which is 1.1166¢ per Mcf (corrected for compressibility) less than Plains' resale rate to Northern. The rates in effect subject to refund were based on Plains' increased rate of 20.1628¢ per Mcf for the sale of gas to Northern which was suspended in Docket No. RI60–102. The proposed settlement rates are based on Plains' settlement rate of 15.75¢ which was approved by order issued October 8, 1963 in Docket No. RI60–102.

In its offer of settlement, Texaco proposes to reduce its increased rates effective from April 25, 1960, to 14.6334¢ per Mcf at 14.65 psia, subject to any applicable contractual deduction for compression.[1] Further, Texaco proposes a moratorium on rate increases for sales made under its FPC Gas Rate Schedule Nos. 52, 53, and 99, until March 1, 1966, which is the moratorium period provided in the Commission's companywide settlement order issued December 30, 1963, in *Texaco Inc.*, Docket No. G–8969, *et al.*, 30 FPC 1631. Refunds are not involved because Texaco has not collected rates above the proposed settlement rates.

Inasmuch as the proposed settlement rates are directly related through a revenue sharing arrangement to the 15.75¢ per Mcf resale settlement rate of Plains, acceptance of Texaco's proposed settlement is in the public interest. Our action here does not constitute either a change in our present policy of suspending all increased rates above 11¢ per Mcf in these areas for the sale of pipeline quality gas within the meaning of the Commission's Statement of General Policy No. 61–1, as amended, or a change in our general settlement policy, but is based solely on the special circumstances presented in this case, in which the Commission's recognition of the agreement made by the parties does not affect the price to the pipeline purchaser.

Our action should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future rate proceedings, including area rate proceedings, involving Texaco's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Texaco on June 19, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Texaco on June 19, 1964, is hereby approved in accordance with the provisions of this order.

(B) Texaco shall file within 30 days from the date of issuance of this order, notices of change in rate providing for the 14.6334¢ per Mcf at 14.65 psia rates specified in its offer of settlement. The notices of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

[1] After September 8, 1961, it was necessary for Plains to compress the subject gas, and a compression charge of 1¢ per Mcf has been in effect pursuant to the contract since that date.

(C) The settlement rates approved herein shall be applicable during the moratorium period provided for all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the subject rate schedules.

(D) Upon notification by the Secretary of the Commission that Texaco has complied with the terms and conditions of the order, the rates and charges of 14.6334¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the issuance of this order, and the above-designated proceeding shall be deemed terminated.

(E) The acceptance by the Commission of Texaco's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Texaco, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PENNSYLVANIA POWER & LIGHT COMPANY, PROJECT NO. 487

ORDER AMENDING LICENSE (MAJOR)

(Issued August 26, 1964)

Application was filed on January 29, 1964 under the Federal Power Act (Act) by Pennsylvania Power & Light Company, licensee for Project No. 487, for amendment of Article 20 of the license for the project and to render inapplicable to such license amortization reserve Regulation 17 in effect when the license was issued.

The purpose of the amendment is to make the license subject to the current regulations of the Commission with respect to the establishment and maintenance of a reserve for amortization.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The license for Project No. 487, amended as hereinafter provided, is in the public interest.

The Commission orders:

(A) The license for Project No. 487 is hereby amended, effective as of July 1, 1946, as follows:

PARAGRAPH I. The paragraph of the license beginning "NOW, THEREFORE" is amended by inserting the words "except Regulation 17" after the phrase "being subject to all the terms and conditions of the Act and of the rules and regulations of the Commission pursuant thereto in force on the 6th day of June 1921,".

PARAGRAPH II. Article 20 of the license is amended to read as follows:

Article 20. After the first twenty (20) years of operation of the project under the license, namely after June 30, 1946, six(6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty (20) years of operation under the license, in excess of six(6) percent per annum of the net investment, shall be set aside in a project amortization reserve account as of the end

of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty (20) years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61–2, ET AL.

ORDER ON PRESIDING EXAMINER'S CERTIFICATION

(Issued August 27, 1964)

The Presiding Examiner has certified four appeals from his rulings entered August 7, 1964, as well as pages 13,966 to 14,032 of that day's transcript. These rulings grow out of the Commission's order of July 13, 1964, in this proceeding (32 FPC 97) which holds that our prohibition against individual company cost presentations in this area rate proceeding does not go to the admissibility, for purposes other than showing the costs of particular respondents, of an array, consistently and uniformly developed, of the ingredients of composite cost presentations. The context of that order was our consideration of a particular array as presented by the Hunt Oil Group in Exhibit No. 182 and as described by their counsel in an appeal from an exclusionary ruling.

It appears that prior to our July 13 order at least some of the participants considered such arrays to be inadmissible for any purpose. (Obviously the Hunt Oil Group felt otherwise. We are now informed that Sun Oil Company presented arrays in its Exhibit No. 189 of "Net investments per volume," "D. D. & A. per volume," and "Cash expense per volume" for the single-production included in the composites and that Sun's exhibit has "not yet been stricken from the record.") In any event, reacting to our order as an invitation, the staff has indicated its intent to present an array-type study and counsel for the Hunt Oil Group has stated that it has spent money, time and effort in the development of certain additional arrays. The Amerada Group and the Associated Gas Distributors Group have indicated that they are seriously considering the possibility of making such a presentation.

In this situation the Presiding Examiner has sought to permit the presentation of certain additional array-type evidence at this time while avoiding a series of

full-fledged individual-company inquiries or other prolonged and repetitive presentations. These goals will plainly require the exercise of a careful discretion on the part of the officer in ruling on the admission of particular evidentiary presentations which are offered.

In advance of such offers, however, the Presiding Examiner has felt it advisable to issue advisory rulings and to submit those rulings for interlocutory review under Section 1.28 of our Rules of Practice and Procedure. The particular rulings follow:

> 1) I am going to rule that any party desiring to present an array-type of exhibit or study in this proceeding will be limited to applying to the individual company data of each of the 81 composited companies the identical methods, factors, allocation ratios, and the like, which have been employed by the Staff in its composite cost presentations in this proceeding. And I will not receive in evidence any proposed array exhibit which uses any other techniques, methods, ratios, or approaches. (89: 14,016)
>
> 2) * * * in connection with the limited type of array presentation which my ruling will permit, I will permit testimony by any witness to support the significance to be drawn from an array prepared in that manner or to attack the significance to be drawn from an array prepared in that manner; . . .
>
> * * * * * * *
>
> . . . I would not permit the Staff witness presenting such an array exhibit for the Staff, or the witness presenting an array exhibit for any other party, to do anything more than explain the mechanical manner in which the array exhibit was constructed. I would not permit such a witness to testify either supporting a rationale as to why the method used makes sense or makes no sense or is useful or is not useful, or anything of that kind. That type of argument would have to be made by counsel in their briefs. (89:14,024)

The Examiner has certified appeals by The California Company, Sun Oil Company, Hunt Oil Company Group, and Amerada Group. Sun argues that new array-type evidence would be untimely and should therefore be rejected. Sun points out that it timely presented its own array evidence. Hunt's apparent objection goes to the first ruling, because it excludes an array based on a straight Btu allocation method. Hunt would desire to employ that method for array purposes, and points out that the method may be useful for revealing dispersions and relationships of costs whether or not it might be the proper costing method for determining the true cost level.

Neither of the other two appellants (The California Company and the Amerada Group) discloses the grounds for its appeal.

On this interlocutory review upon the Examiner's certification, but without prejudice to reconsideration of these matters at the time when the full record is before us, we reach the following conclusions: We deny Sun's appeal from the Examiner's ruling in favor of admitting certain new evidence at this time. We grant Hunt's appeal from the restriction of the new array-type evidence to employment of the staff's allocation methods. We also affirm the Examiner's restriction of the testimony accompanying any new array-type exhibit to a description of the mechanics employed.

Array-type evidence provides one approach to analyzing the ingredients of a composite cost. We think some kind of analysis is appropriate but we do not hold that only the numerical, array analysis will do. We cannot tell, on this

interlocutory review, whether the record contains some other kind of evidence which adequately performs this task and makes additional array evidence unnecessary. However, participants taking such opposite views of the usefulness of the composite cost data as our staff and the Hunt Group have concluded that the record probably should be supplemented in light of our July 13 order by additional array evidence. In these circumstances we cannot hold that the Examiner erred in permitting a further opportunity to present such evidence.

Aside from the colloquies and the Examiner's ruling being appealed from, the only portion of the record which has come before us to date is Hunt's proffered Exhibit No. 182. We thought that such a unit cost breakdown could shed light on the diverse ingredients making up the composite. We indicated in our July 13 order that it would be more useful if we were shown the relevant gas volumes as well as the unit costs. Then we could consider the dispersion of cost as weighted for volume. We would also like to know whether the weighted average cost of all the members of the array differed significantly in practice, as it might in principle, from the cost as determined directly from the composited data.

Counsel's comments in the transcript certified to us, as well as the previous appeal, indicate Hunt's grasp of the issue and willingness to present meaningful array-type evidence. If expeditiously concluded, we would welcome the further efforts of Hunt, as well as of our staff, to make such presentations.[1] We here set aside the Examiner's first ruling, restricting the allocation methods to be employed in developing the arrays, since, in the case of the Hunt group it would deprive it of the opportunity to employ the straight Btu method for its additional studies. The cost relationships which an array would display may well be the same for all practical purposes no matter what allocation method is employed. Here, however, the Btu method would employ the same allocation ratio for all costs (cash expense, and D. D. & A., and return on investment) whereas the staff methods would apply different allocation ratios for each type of cost. We do not believe that Hunt, or any other party, should be foreclosed from exploring the consequences of this difference (if there be any substantial consequences). This does not mean, however, that the Examiner should now admit expert evidence sponsoring the appropriateness of the straight Btu method. Even assuming no testimony in favor of that method has been introduced into the record, we could consider evidence based upon its application if otherwise appropriate for the Btu method has been advocated in many prior Commission proceedings, in some of which it was adopted, in some modified,[2] and in some, perhaps most, rejected. It would thus be an exercise in pure redundancy to accept such sponsoring evidence at this late stage in the proceeding.

We have extensively discussed Hunt's prior presentation in Exhibit 182 only because that is the sole array which has actually come before us. We do not thereby tie the parties to that or any other particular form of array presentation. We must rely on our staff and the parties to present their data in the manner they deem most effective.

It should be understood that the only arrays now to be considered are those which analyze the costs, or allocated portion of the costs, which have been included in composited data of record. Thus if actual unadjusted test-year costs

[1] The Examiner has directed the staff to present its new array-type evidence by September 10. We trust that in light of this order he will fix a date as shortly thereafter as possible for presentations by the parties.

[2] Hunt's proposed use of the Btu method seems analogous to the Commission's employment of that method for purposes of determining certain trends, even though it modified the method for purposes of determining cost levels, in *Phillips Petroleum Co.*, 24 FPC at 698–99.

were included in the composite, those costs should not be normalized in an array. The same principle applies with respect to the test-year volumes.

We reiterate that we do not intend by this ruling to permit individual company cost studies to be introduced into the record under the guise of an array. Therefore any array which is offered should be developed by the application of the same method or methods to each company's data.

Finally, we affirm the Examiner's second ruling which limits the testimony that may accompany new, array-type evidence to a description of the mechanics by which the witness constructed his exhibit. This salutary ruling should obviate the need for any protracted cross-examination. Clarifications of the testimony, if deemed necessary, should be achieved through the exchange of workpapers and employment of interrogatories and similar procedural devices, as was accomplished in the Permian Basin proceeding. As the Examiner correctly pointed out, the significance of the array-type evidence can be adequately argued in briefs.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NEKOOSA-EDWARDS PAPER COMPANY, PROJECT NO. 2291

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued August 27, 1964)

On March 22, 1964, Nekoosa-Edwards Paper Company, licensee for Project No. 2291, filed application for Commission approval of revised Exhibits J and K to show the exclusion from the project of two parcels of lands.

The licensee advises that the area sought to be excluded is residential property not necessary for the operation of the project, and was inadvertently included in the initial application for license as a part of the project. According to the project maps and other information on file with the Commission, the parcels are not now and never were occupied by any of the project works and in view of the location thereon of family residences, the parcels would not lend themselves to use for recreational development and are not necessary for operation of the project.

The effect of Commission approval of the revised exhibits would be a reduction of privately-owned lands within the project boundary totaling 1.066 acres.

The Commission orders:

Exhibit J (FPC No. 2291–1) and Exhibit K (FPC No. 2291–2), revised to show the exclusion of the lands referred to above, are hereby approved as part of the license for Project No. 2291.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF COLORADO, PROJECT NO. 2187

ORDER ISSUING LICENSE (MINOR)

(Issued August 27, 1964)

Application was filed on December 11, 1963, by Public Service Company of Colorado (Applicant) of Denver, Colorado, for a minor license under Sections 4(e) and 10(i) of the Federal Power Act (Act) for constructed minor Project No. 2187, located on South Clear Creek, a tributary stream in the South Platte River Drainage Basin, in Clear Creek County, Colorado, and affecting lands of the United States within the Arapaho National Forest and other lands of the United States.

The afore-mentioned application amended an application for a minor-part license for the project filed on June 6, 1955, amended on May 13, 1958, and supplemented on January 23, 1962, and superseded Applicant's request for a minor-part license.

The project works are operating on a run-of-stream basis without water storage. The energy generated by the project enters into Applicant's transmission and distribution system.

According to the application for minor license, all of the project works, including the powerhouse with an installation of 1930 horsepower, were constructed over 50 years ago and have been operating under a land use permit issued by the Department of Agriculture. Applicant does not claim any rights with respect to the aforesaid land use permit and we do not pass on its validity.

In the case of license applications timely and voluntarily filed under the Androscoggin decision, Opinion 357 (27 FPC 830), the Commission has fixed a termination date of December 31, 1993 regardless of when existing projects were originally constructed. Accordingly, licenses for projects formerly operated under federal permits should generally be issued for a period of 25 years or to extend to December 31, 1993 whichever is longer, except in cases where for good cause a different term is justified. In the circumstances of this case, we are issuing a license for a period terminating December 31, 1993.

The Department of Agriculture has reported that the project does not interfere with and would not be inconsistent with the purposes for which the Arapaho National Forest was created or acquired, provided recommended amended Articles 7 and 8 of Form L–7 are included in any license for the project.[1]

The Department of the Interior has recommended for inclusion in any license for the project a condition in the interest of providing free access to the public.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Colorado and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

---

[1] Form L–7 contains terms and conditions usually included in licenses for minor projects affecting lands of the United States.

(3) The project affects lands of the United States within the Arapaho National Forest and other lands of the United States.

(4) The project does not affect a Government dam.

(5) The issuance of a license for the project as hereinafter provided will not interfere or be inconsistent with any reservation or with the purposes for which the Arapaho National Forest was created or acquired.

(6) The amount of annual charges to be paid under the license for the project for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) The substation mentioned in subparagraph (ii) of paragraph (B) below, which was included in the application for license, is part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

(9) It will be in the public interest to waive the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a); 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 18, except insofar as it relates to fishways; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Public Service Company of Colorado (Licensee) of Denver, Colorado, under Sections 4(e) and 10(i) of the Act, effective as of August 1, 1964, and terminating December 31, 1993 for the continued operation and maintenance of minor Project No. 2187, located on lands of the United States within the Arapaho National Forest and other lands of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2187 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A water gathering system comprising Murray (sometimes known as Murry) Lake, a reservoir of 80 acre-feet with earth filled dam 12 feet high; Silver Dollar Lake Reservoir of 440 acre-feet with earth filled dam 8 feet high; Clear Lake of 585 acre-feet, a rock filled dam 10 feet high with steel piling face; Green Lake of 270 acre-feet, a rock filled dam 8 feet high with concrete face; and Forebay Reservoir of 8 acre-feet, a rock filled dam 10 feet high with steel piling face: Water conduits consisting of Silver Dollar Ditch 1522 feet long, 2 feet wide at top, 1 foot wide at bottom and 1.5 feet deep, a diversion from South Clear Creek (also known as South Fork of Leavenworth Creek); Green Lake Gravity Pipe Line 3947 feet long, 22-inch diameter at source to 12-inch diameter at point of discharge into Green Lake, a diversion from Leavenworth Creek; Pressure Pipe Line 5410 feet long, 30-inch diameter at Forebay Reservoir and 26-inch diameter at hydro plant: Powerhouse containing two 720 kw generators (total of 1930 horsepower); substation; together with all other structures, equipment, or facilities used or useful in the maintenance and operation of the project

and located on the project area; which lands and project works are more specifically shown and described by certain exhibits which formed part of the application and which are designated and described as follows:

Exhibit J (FPC No. 2187-5) Georgetown Hydro Reservoirs and Water Conduits;

Exhibit K (FPC Nos. 2187-8, -9 and -11) Georgetown Hydro Reservoirs & Water Conduits;

Exhibit L (FPC No. 2187-10) Georgetown Hydro Reservoirs and Water Conduits.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located upon the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof, except for Articles 7 and 8 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 15. Effective as of January 1, 1965, the Licensee shall pay to the United States the sum of One Hundred Dollars ($100.00) annually for the purpose of reimbursing the United States for the costs of administration of Part I of the Act; or such other amount as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 16. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health and property; and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the licensee may construct and maintain as required by the license.

Article 17. Timber on lands of the United States cut, used or destroyed in the construction and maintenance of the project works, or in the clearing of said lands, shall be paid for and the resulting slash and debris disposed of in accordance with the requirement of the agency of the United States having jurisdiction over said lands. Payment for merchantable timber will be at current stumpage rates, and payment for young growth timber below merchantable size will be at current damage appraisal value. However, the agency of the United States having jurisdiction may sell or dispose of the merchantable timber to others than the Licensee, with the provision that timber sold or disposed of will be cut and removed from the area prior to or without undue interference with clearing operations of the Licensee and in coordination with the project construction schedules. Such sale or disposal to others will not relieve the

Licensee of the responsibility for the clearing and disposing of all slash and debris from project lands.

Article 18. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon the request of officers of the agency concerned to prevent, make advance preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensee shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 19. The Licensee shall, within six months from the effective date of this license, file with the Commission a revised Exhibit K to define the final project boundary in accordance with rules and regulations of the Commission.

Article 20. The Licensee shall, within one year from the effective date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(D) The Commission reserves the right to determine at a later date the amount of annual charges to be paid to the United States for the purpose of recompensing it for the use, occupancy and enjoyment of its lands by the project.

(E) The terms and conditions of the Act, which it has been found herein to be in the public interest to waive, are hereby excluded from the license.

(F) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(G) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.

ORDER PARTIALLY GRANTING REHEARING FOR FURTHER CONSIDERATION AND DISPOSAL OF MOTIONS TO DEFER AND TO RESCHEDULE FILING OF BRIEFS AND STATEMENTS

(Issued August 27, 1964)

On July 23, 1964, 32 FPC 254, the Commission issued its Opinion No. 436 in the above-entitled proceeding. A number of participants have submitted applications for rehearing, the first duly verified application being filed by Pan American Petroleum Corporation on August 6, 1964. In addition, various motions have been submitted for stay of certain actions required in the order accompanying Opinion No. 436. Since the statutory period under Section 19(a) of the Natural Gas Act is insufficient to permit a timely and proper disposition of these applications and motions, it is necessary and appropriate to grant rehearing for the purpose of enabling further consideration of the arguments and allegations adduced.

The limited rehearing herein granted will have, during its pendency, the effect of extending the time limitation set out in the ordering paragraphs with respect to which stay is sought.

The time for filing of briefs on the refund issue has already been extended by the Secretary to September 21, 1964, with replies due on or before October 1, 1964. In our opinion, a further delay is warranted to permit the Commission to give further consideration to the proper procedure for determining the refund issues, and we are accordingly deferring any filing of briefs, statements of fact or statements of evidence on this issue until further order of the Commission.

Kerr-McGee Oil Industries, Inc., and Phillips Petroleum Company have moved to reschedule the briefing called for in ordering paragraph (F) of Opinion No. 436 in the above-entitled matter. Such paragraph called for briefs by interested parties within 90 days of the effective date of said order. The motion would divide the 90-day period to provide for initial briefs within 70 days and reply briefs within the following 20 days. There being no opposition to this motion, it is hereby granted.

The Commission orders:

(A) Rehearing in this proceeding is hereby granted for the sole purpose of reconsideration of the said pending applications and motions.

(B) The provisions of ordering paragraph (F) of Opinion No. 436 issued July 23, 1964, are hereby modified to provide that initial briefs shall be filed on or before October 1, 1964, and that reply briefs may be filed on or before October 21, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-303

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 28, 1964)

On June 19, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-303 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring and regulating station to be located on Applicant's 5-inch pipeline running from Station No. 4 to Silver City, in Grant County, New Mexico. The proposed facility is to be used for the sale of natural gas to Western Gas Service Company for resale to Reese Mining and Manufacturing Company for use in its brick plant near Silver City, New Mexico, all as more particularly described in the application, above mentioned.

The estimated cost of the facilities is $5,500, which will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

ROCHESTER GAS AND ELECTRIC CORPORATION, DOCKET NO. E–7154

ORDER DENYING REHEARING

(Issued August 28, 1964)*

On March 2, 1964, the Rochester Gas and Electric Corporation petitioned for a declaratory order that it does not require a license for the continued maintenance and operation of its four hydroelectric projects on the Genesee River, New York. The Corporation contended that the projects are not located on navigable

*Affirmed in part; vacated in part, *Rochester Gas & Electric Corp.* v. *F.P.C.*, 344 F. 2d 594; (CA2–1965); cert. denied, 382 U.S. 832.

waters of the United States. On facts stated in the Corporation's petition, the Commission on July 7, 1964, 32 FPC 48, found that: (1) the Genesee River from above the Rochester Gas and Electric Company's project works to its mouth at Lake Ontario is a "navigable water of the United States" within the meaning of subsection 23(b) of the Federal Power Act; (2) Rochester Gas and Electric Corporation maintains and operates four hydroelectric projects, designated Stations 2, 5, 26 and 160, across, along, or in the Genesee River without a permit or a valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Federal Power Act. We ordered the Corporation to apply for a license for such projects.

The Corporation applied for rehearing on August 3, 1964. The Corporation acknowledges that the Genesee River has supported commerce, but contends that there is no evidence that this commerce was of an interstate character. The uncontested facts show that before the improvement of the river, agricultural and other products were rafted downstream to Rochester, New York, and after the completion of the Genesee Valley Canal, barges plied between Rochester and the Pennsylvania border.

It is inconceivable that some of the goods in this traffic never entered interstate or foreign commerce either by transshipment at Rochester to or from the Great Lakes or the Erie Canal, both of which the Supreme Court has declared to be navigable waters of the United States,[1] or by crossing the Pennsylvania border at the opposite end of the Genesee Valley Canal. In any event, the mere capability of use by the public for purposes of transportation in interstate or foreign commerce affords the true criterion of navigability.[2]

The Corporation argues that, even if the Genesee River has supported interstate commerce, it was not "substantial and permanent." It is clear that the navigation upon the Genesee River is at least as extensive as upon certain other streams which have been declared navigable waters of the United States. For example, conditions on the Fox River, Wisconsin, having its headwaters near Portage, Wisconsin, and its mouth at Green Bay, are very similar to those on the Genesee River. The Fox River was made difficult for navigation in its natural state by several rapids, two of the largest of which are Grand Chute and De Pere. "It is true," as the Supreme Court observed, "without the improvement by locks, canals," and dams the Fox River through its entire length could not be navigated by steam boats or sail vessels . . . ."[3] The Fox River was used as a waterway between Green Bay and the Wisconsin River. It was found to be a navigable water of the United States in *The Montello*.[4]

The Supreme Court has stated expressly that it is not necessary for navigability that the use should be permanent. This principal is contained in *Economy Light and Power Co.* v. *United States*[5] and *United States* v. *Appalachian Electric Power Co.*[6] The navigation upon the Genesee River is at least as enduring as upon the waterways involved in these cases. In the *Economy* case, the Supreme Court said:[7]

> The Desplaines River, after being a practical service as a highway of commerce for a century and a half, fell into disuse, partly through

[7] See note 5.

changes in the course of trade, or methods of navigation, or changes in its own condition, partly as the result of artificial obstructions.

In consequence, it has been out of use for one hundred years; but a hundred years is a brief space in the life of a nation; improvements in the methods of water transportation or increased cost in other methods of transportation may restore the usefulness of this stream; since it is a natural interstate waterway, it is within the power of Congress to improve it at the public expense; and it is not difficult to believe that many other streams are in like condition and require only the exertion of federal control to make them again important avenues of commerce among the States. *If they are to be abandoned, it is for Congress, not the courts, so to declare.* [Emphasis added.]

The Corporation alleges, at least by implication, that a canal using water from a river and running beside it is not a reasonable improvement of the river, even if the barge traffic in places travels in the channel of the river itself. For purposes of determining Congress' control of waterways under the commerce clause, there is no distinction between improvements for navigation actually in the bed of a stream and those merely along it.[8] Both are subject to national planning and control in the regulation of interstate and foreign commerce.[9]

The Corporation challenges the constitutionality of Section 3(8) of the Federal Power Act (16 U.S.C. 796), defining navigable waters, on the ground that it improperly includes "interruptions between the navigable parts of . . . streams or waters by falls, shallows, or rapids compelling land carriage." This section, far from innovating in defining navigable waters, was in effect a codification of the extensive case law on the subject. The Supreme Court cases cited in note 6 of our declaratory order refute any suggestion that the section is unconstitutional. As the Supreme Court observed in *First Iowa Hydro-Electric Cooperative* v. *F.P.C.*,[10] the statutory scheme of the Federal Power Act has been several times reviewed and approved by the courts.

The Corporation denies that there is evidence that, with reasonable improvements, the Genesee River again could support interstate transportation. Aside from the suggestive authorities referred to in notes 3 and 4 of our declaratory order, there is ample support for our holding in Exhibit C, entitled "Genesee River Flows, 1907–1962", of the Corporation's petition. The flows of the Genesee River compare favorably with those of a variety of other rivers which have been declared navigable.

The Corporation's several other contentions are merely ancillary to those set forth and answered above.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823) that the Rochester Gas and Electric Corporation's application for rehearing filed on August 3, 1964, on the declaratory order, issued on July 7, 1964, requiring the Corporation to file application for licenses for its four hydroelectric projects on the Genesee River, New York, be denied.

The Commission orders:

The aforesaid application for rehearing by Rochester Gas and Electric Corporation is hereby denied.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-213

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 28, 1964)

On March 24, 1964, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64-213 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas transmission facilities, and requesting the issuance of a certificate of public convenience and necessity authorizing the construction and operation of certain replacement natural gas transmission pipeline facilities, all as more fully set forth in the application.

Applicant proposes to abandon: (a) approximately 1.8 miles of 8-inch pipeline which traverses a recently urbanized area outside Greenville, Washington County, Mississippi, by sale to Mississippi Valley Gas Company (Mississippi Valley) which company Applicant is presently serving by said pipeline; (b) approximately 0.6 mile of 8-inch tie-over pipeline which presently connects Applicant's Greenville Compressor Station with the line to be sold to Mississippi Valley in (a) above; and (c) two parallel 6-inch pipelines, each 10.2 miles long, extending from Applicant's 12-inch Slaughters-Montezuma pipeline to its Oaktown Storage Field Compressor Station in Knox County, Indiana. The facilities to be abandoned in (b) and approximately six miles of those in (c) above will be salvaged and returned to stock. The remainder are in poor condition and will be abandoned in place.

Applicant proposes to construct and operate: (a) approximately 10.2 miles of 12-inch pipeline to replace the two 6-inch lines in Knox County, Indiana, and (b) approximately 2 miles of 12-inch pipeline to perform the service presently being rendered by the 8-inch and tie-over lines in Washington County, Mississippi.

The estimated cost of the proposed 12-inch pipelines to be constructed is $518,000, which will be defrayed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented and amended, has been filed.

At a hearing held on August 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G-855 (7 FPC 213).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the

public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Texas Gas Transmission Corporation, of the facilities hereinbefore described, as more fully described in the application and exhibits filed in this proceeding, are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Texas Gas Transmission Corporation, authorizing the construction and operation of facilities, and the transportation of natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities hereby authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid regulations within six months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-266

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 28, 1964)

On April 30, 1964, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64-266 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the construction, installation and/or operation of facilities which may be necessary to enable Applicant to define, develop and/or test prospective gas storage reservoirs during the 36-month period [1] commencing on the date of granting of such authorization at a total cost not to exceed $2,000,000 during the first year, with no single project to exceed a cost of $1,250,000, all as more fully set forth in the application.

The purpose of this proposal is to permit Applicant to engage in a vigorous and continuing program of adding storage facilities to its system whenever such additional storage will benefit its system operations and service to its customers.

The total volumes of natural gas to be injected into the prospective underground storage projects during the first year will not exceed 5,000,000 Mcf with not more than 2,000,000 Mcf injected in any single project.

Only off-peak gas will be used for the testing purposes hereunder. No new sales or service are involved.

Due notice of the subject application was published in the Federal Register on July 31, 1964 (29 F.R. 11135). No petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on August 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in the Presiding Examiner's decision in Docket No. G-855, affirmed by the Commission in its order issued April 2, 1948 (7 FPC 223).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction, installation and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction, installation and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction and installation during the 12-month period commencing on the date on which this order issues, and the total expenditures thereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $1,250,000. Total injections of natural gas to be used in the testing of all storage projects

[1] Applicant has agreed informally to accept authorization limited to a 12-month period from date of authorization, and a limitation of total injection volumes during such period to 5,000,000 Mcf.

should not exceed 5,000,000 Mcf with not more than 2,000,000 Mcf injected in any single project.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) a description of the facilities constructed and installed under this authorization, (b) the location of said facilities, (c) the cost of said facilities, (d) the estimated capacity of each successful project, and (e) the volume of gas injected and withdrawn from each reservoir.

(8) Costs incurred with respect to any single unsuccessful gas storage reservoir should be charged to Account 822, Exploration and Development.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and/or install during the 12-month period commencing on the date on which this order issues, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to test and develop prospective gas storage reservoirs in Kentucky and Indiana as applied for.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction and installation during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,000,000, with no single project to exceed a cost of $1,250,000. Total injections of natural gas to be used in the testing of all storage projects shall not exceed 5,000,000 Mcf with not more than 2,000,000 Mcf injected in any single project.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement showing by projects: (a) a description of the facilities constructed and installed under this authorization, (b) the location of said facilities, (c) the cost of said facilities, (d) the estimated capacity of each successful project, and (e) the volume of gas injected and withdrawn from each reservoir.

(E) Applicant shall charge the costs incurred with respect to any single unsuccessful gas storage reservoir to Account 822, Exploration and Development.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-154

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SERVICE AGREEMENT AND TARIFF SHEETS FOR FILING

(Issued August 31, 1964)

On June 2, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP62-154 an application to amend the order of the Commission issued October 17, 1962, 28 FPC 614, in Docket No. CP62-154 authorizing Applicant to sell and deliver on an interruptible, best efforts basis, under its Rate Sched-

ule G–X–2, FPC Gas Tariff, Original Volume No. 1, during the calendar year 1962, up to 25,700,000 Mcf of natural gas (at 14.9 psia) to Southern California Gas Company and Southern Counties Gas Company of California (jointly "Southern") for resale by Southern in the California market area. The application to amend seeks authorization to extend Applicant's authorization to permit resumption of sales of best efforts excess gas to California customers, namely Southern, all as more fully set forth in the application to amend.

Applicant states Southern will use the subject gas to increase the reserves in its storage reservoirs which were depleted due to subnormal spring temperatures and to provide additional interruptible industrial service. Service will be under Applicant's Rate Schedule G–X–2 at a rate of 22.48 cents per Mcf for a limited period ending December 31, 1965.

Applicant tenders for filing and acceptance (1) an executed service agreement dated May 22, 1964, between Applicant and Southern providing for the sale and delivery of natural gas on a best efforts basis through December 31, 1965, and (2) Fifth Revised Sheet No. 27–I and First Revised Sheet No. 91–N, FPC Gas Tariff, Original Volume No. 1.

Due notice of the filing of the application to amend and opportunity for hearing has been given by publication in the Federal Register on July 25, 1964 (29 F.R. 10404). No protest, petition to intervene or request for hearing has been filed concerning this amendment.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued October 17, 1962, in Docket No. CP62–154 be amended as hereinafter ordered.

(2) The public convenience and necessity require that both the service agreement dated May 22, 1964, and revised tariff sheets, hereinabove described, be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) The Commission's order issued October 17, 1962, in Docket No. CP62–154 be and the same is hereby amended so as to authorize, during the limited period commencing with the date of issuance hereof and continuing through December 31, 1965, the sale and delivery of a maximum of 174,680 Mcf of natural gas (at 14.73 psia) daily to Southern California Gas Company and Southern Counties Gas Company of California.

(B) El Paso Natural Gas Company's service agreement dated May 22, 1964, with Southern providing for the sale and delivery of natural gas on a best efforts basis through December 31, 1965, and Fifth Revised Sheet No. 27–I and First Revised Sheet No. 91–N, FPC Gas Tariff, Original Volume No. 1 are hereby accepted for filing to become effective on the date this order issues.

(C) Applicant shall report at the end of each thirty day period the volumes of natural gas sold and delivered to Southern.

(D) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NOS. RP65-2 AND RP65-5

ORDER SUSPENDING PROPOSED REVISED TARIFF SHEETS, INSTITUTING INVESTIGATION OF TARIFF PROVISIONS, CONSOLIDATING PROCEEDINGS AND PROVIDING FOR HEARING

(Issued August 31, 1964)

On July 6, 1964, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), tendered for filing certain revised tariff sheets,[1] to become effective as of September 1, 1964. Michigan Wisconsin states that the purpose of the filing is to delete Section 7.4 from its Rate Schedule ACQ-1. Section 7.4 provides that, under certain conditions, customers of Michigan Wisconsin purchasing gas under Rate Schedule ACQ-1 may, if they so desire, release a portion of their annual contract quantity for purchase by other customers who desire volumes of gas in excess of their annual contract quantity. Michigan Wisconsin in support of its filing states that Section 7.4 is a unique provision which was justified only as a temporary measure to facilitate the transition by its customers from a straight rate to a two-part rate. Michigan Wisconsin also claims that the proposed filing will not affect its rate level. The schedule attached to the filing indicates, however, that while the proposal may have no net effect on Michigan Wisconsin's revenue, the proposed elimination of Section 7.4 will result in a rate increase to a number of customers.

Comments on this and petitions to intervene[2] have been filed by some of Michigan Wisconsin's customers.[3] Each contends that it may be adversely affected by these proceedings. Michigan Consolidated Gas Company and Wisconsin Fuel and Light Company support the proposed change. Michigan Gas Utilities Company, Madison Gas and Electric Company, Iowa Electric Light and Power Company, Michigan Gas and Electric Company and Iowa Southern Utilities Company oppose the deletion, stating that such an action may increase their annual average purchase gas cost. Michigan Gas and Electric Company, in addition recommends that the filing be rejected because Michigan Wisconsin alleges no changed facts or circumstances occurring since the Commission issued Opinion No. 387 which would now justify a piece-meal change in the Commission approved rates. Iowa Electric Light and Power Company contends that "there has been no change in the situation since the rates prescribed in Docket No. G-17512 became effective which would warrant changing the relative positions of the customers and accordingly Section 7.4 would be continued."

Preliminary review of the possible impact of the deletion of Section 7.4, the controversies and misunderstandings between Michigan Wisconsin and some of its customers, as alluded to in its filing, and recent proceedings involving sales for resale for industrial purposes, indicate a need for general investigation of Michigan Wisconsin's tariff, including the general terms and conditions. Among others, the following factors and the tariff provisions relating thereto appear to

[1] First Revised Sheet Nos. 8 and 32, Fourth Revised Sheet No. 9 and Fifth Revised Sheet No. 28 to Michigan Wisconsin's FPC Gas Tariff, Second Revised Volume No. 1.

[2] The petitions to intervene will be the subject of a separate order.

[3] Michigan Consolidated Gas Company, Wisconsin Public Service Corporation, Wisconsin Fuel and Light Company, North Central Public Service Company, Iowa Electric Light and Power Company, Milwaukee Gas Light Company, Michigan Gas Utilities Company, Madison Gas and Electric Company, Michigan Gas and Electric Company and Iowa Southern Utilities Company.

warrant investigation: (1) the release of gas by customers under Section 7.4 and subsequent purchase of gas under the overrun provisions of Rate Schedule OS–1; (2) the impact on customers of the proposed deletion of Section 7.4; (3) the use by customers of their total ACQ before expiration of the contract year and subsequent purchases under Rate Schedule OS–1; (4) the present method and terms for establishing of a customer's MDQ and ACQ, including the need for such limitations of service; (5) the penalty provisions for excessive takes of volumes of gas; (6) the possible need for tariff provisions relating to sales for resale for industrial use, both firm and interruptible, to assure sufficient storage gas to meet customers' firm requirements during the winter months; (7) the advisability of providing storage or peaking service under separate rate schedules; and (8) such other modification of the tariff provisions as may be necessary and appropriate to complement and effectuate any of the foregoing.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the rates, charges, classifications and services contained in Michigan Wisconsin's FPC Gas Tariff, Second Revised Volume No. 1 and into the rules, regulations, practices, service agreements, or contracts relating thereto, as proposed to be amended by First Revised Sheet Nos. 8 and 32, Fourth Revised Sheet No. 9 and Fifth Revised Sheet No. 28, and that those sheets should be suspended and the use thereof deferred as hereinafter provided.

The Commission orders:

(A) Pursuant to the authority of the National Gas Act, particularly Sections 4, 5, 15 and 16 thereunder, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act (18 CFR, Chapter 1), a public hearing be held on a date fixed by notice from the Presiding Examiner Francis L. Hall concerning the lawfulness of the rates, charges, classifications and service contained in Michigan Wisconsin's FPC Gas Tariff, Second Revised Volume No. 1 and the rules, regulations, service agreements or contracts relating thereto, as proposed to be amended by First Revised Sheet Nos. 8 and 32, Fourth Revised Sheet No. 9 and Fifth Revised Sheet No. 28, tendered for filing on July 6, 1964.

(B) Pending such hearing and decision thereon, Michigan Wisconsin's proposed revised tariff sheets identified in Paragraph (A) above, hereby are suspended and their use deferred until February 1, 1965, and thereafter until such further time as they are made effective in the manner provided by the Natural Gas Act.

(C) Michigan Wisconsin shall file its complete case-in-chief on all issues, including those referred to above, on or before October 9, 1964, and concurrently shall serve copies thereof upon the Staff, and all other parties of record.

(D) The Staff of the Commission shall file such evidence as it proposes to adduce in this proceeding and shall serve such evidence upon Michigan Wisconsin and other parties on or before November 6, 1964.

(E) All other parties desiring to present evidence herein shall file their testimony and exhibits and shall serve copies thereof upon the Staff and all other parties on or before November 16, 1964.

(F) The Presiding Examiner shall set the time for filing of rebuttal evidence by Michigan Wisconsin and, if he determines it to be necessary and appropriate and without unduly delaying the proceedings, may provide for filing of cross-rebuttal between the parties (including Staff) on a date prior to the date set for filing of Michigan Wisconsin's rebuttal.

(G) If the Commission, after a hearing has been had, shall find with respect to Michigan Wisconsin that its tariff or any of its rules, regulations, practices,

classifications, service agreements or contracts, subject to the jurisdiction of the Commission are unjust, unreasonable, unduly discriminatory, or preferential, the Commission will thereupon determine and fix by order or orders, just and reasonable tariff provisions, rules, regulations, practices, classifications, service agreements or contracts to be therafter observed and in force.

(H) The proceedings in the above Docket Nos. RP65–2 and RP65–5 are hereby consolidated for purpose of hearing and decision.

(I) Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner shall commence at 10:00 A.M. (EDT) on November 30, 1964, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C. for the purpose of defining the issues, reaching an agreement and stipulation thereon and any other facts relevant to this matter, and, if necessary, to prescribe procedures for hearing herein giving effect to the Commission's intent that this matter be expedited. The Presiding Examiner may in his discretion, provide for any other conferences or procedures he deems appropriate in carrying out the policy and intent of Section 2.59 of the Commission's Rules of Practice and Procedure.

(J) Interested State Commissions may participate as provided by Sections 1.8 and 1.37(f) of the Commission's Rules of Practice and Procedure.

(K) Notices of Intervention or Petitions to Intervene in these consolidated proceedings may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Rules of Practice and Procedure on or before October 1, 1964. Petitioners listed above need not submit further petitions to intervene.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

WISCONSIN VALLEY IMPROVEMENT COMPANY, DOCKET NO. E–7178

ORDER APPROVING HEADWATER BENEFITS ARRANGEMENT

(Issued August 31, 1964)

On August 19, 1963, the Wisconsin Valley Improvement Company (Company), with principal offices in Wausau, Wisconsin, requested approval of a method of compensating it for headwater benefits from its water storage reservoirs in the Wisconsin River basin, Wisconsin. Section 13.1 of the Regulations under the Federal Power Act provides for Commission review and approval of headwater benefit arrangements in lieu of a headwater benefits determination under subsection 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The Company is owned by four utilities and eight pulp and paper companies which operate some twenty-six hydroelectric plants receiving headwater benefits from the Company's twenty-one water storage reservoirs, collectively licensed as Project No. 2113. These twelve corporations and their respective hydroelectric projects are listed below:

Corporation	*Hydroelectric project*
Wisconsin Public Service Corporation	Otter Rapids
	Hat Rapids
	Jersey
	Tomahawk
	Grandfather
	Alexander
	Merrill
	Wausau

Corporation	*Hydroelectric project*
Rhinelander Paper Company	Rhinelander
Tomahawk Power and Pulp Company	Kings
Owens-Illinois Glass Company	Grandmother
Marathon, a Division of American Can Company	Marathon (Rothschild)
Consolidated Papers, Inc	Wisconsin Rivers Division (Jordon)
Mosinee Paper Mills Company	Mosinee
Consolidated Water Power Company	Du Bay
	Stevens Point
	Biron
	Wisconsin Rapids
Whiting-Plover Paper Company	Plover
Nekoosa-Edwards Paper Company	Centralia
	Port Edwards
	Nekoosa
Wisconsin River Power Company	Petenwell
	Castle Rock
Wisconsin Power & Light Company	Kilbourn
	Prairie du Sac

These corporations make payments to the Company for headwater benefits according to Laws of Wisconsin 1907, ch. 335, as amended from time to time and particularly in Laws of Wisconsin 1939, ch. 497, which constitute the Company's enabling act. Section 5 of this act reads in pertinent part:

> The company . . . shall, subject to the supervision and control hereinafter provided for, be entitled to charge, collect and receive reasonable and uniform tolls from the owner or owners, lessee or lessees, or operators of each and every improved and operated water power located upon the Wisconsin river, or any tributaries thereof below any of said reservoirs benefited thereby, but not exceeding in aggregate of all its revenues sufficient to pay all reasonable costs of operation and maintenance, including taxes and depreciation, and a net return not exceeding seven percent on the capital invested, and a reasonable allowance for working capital.
>
> Said tolls shall be semiannually ascertained, fixed and determined by the [Wisconsin public service] commission as hereinafter provided. Said tolls shall be fixed in proportion to the benefits conferred by the reservoir system upon each of the improved and operated water powers aforesaid:

The method presently used for apportioning tolls for a six-month period under this language is as follows: The costs to be distributed, called the "total tolls", are the direct operating and maintenance expenses, administrative expenses, depreciation and taxes, less miscellaneous income, plus a maximum return on the capital invested of 3.5 percent for a six-month period. (A return of 2.3023 percent was allowed for the first semi-annual period of 1963.) The "total tolls" are prorated among the users of the water in proportion to their respective "toll heads", which are found by multiplying the "operating head" (the average of the actually measured net head for the period of reservoir release occurring during the six-month reporting period) of each downstream plant by the portion of the release from the headwater improvements which the plant is capable of using.

Under this system, the owners of downstream plants for the most recent re-

ported period—July 1, 1963, through December 31, 1963—were assessed as follows:

Corporations	*Assessments*
Wisconsin Public Service Corporation	$41,969.80
Rhinelander Paper Company	3,104.35
Tomahawk Power and Pulp Company	2,511.71
Owens-Illinois Glass Company	4,647.92
Marathon, A Division of American Can Company	5,312.60
Consolidated Papers, Inc	9,606.97
Mosinee Paper Mills Company	3,980.81
Consolidated Water Power Company	41,768.91
Whiting-Plover Paper Company	363.88
Nekoosa-Edwards Paper Company	18,839.03
Wisconsin River Power Company	31,460.12
Wisconsin Power & Light Company	27,074.16
Total	190,640.26

Beginning with the first semi-annual period following June 10, 1920, when the Federal Water Power Act (Part I of the Federal Power Act since 1935) was approved, through June 20, 1963 (that is, to the beginning of the last reported period), the owners of the downstream plants or their predecessors were assessed as follows:

Corporations	*Assessments*
Wisconsin Public Service Corporation	$2,174,925.79
Rhinelander Paper Company	195,749.86
Tomahawk Power and Pulp Company	133,026.13
Owens-Illinois Glass Company	274,577.86
American Can Company	312,943.31
Mosinee Paper Company	265,691.27
Consolidated Water Power Company	2,127,488.70
Whiting-Plover Paper Company	18,610.16
Nekoosa-Edwards Paper Company	1,137,439.16
Wisconsin River Power Company	750,751.75
Wisconsin Power & Light Company	1,381,388.75
Consolidated Papers, Inc	612,038.78
Total	9,384,631.52

The Commission finds:

(1) The aforesaid assessments from July 1, 1920, through December 31, 1963, are reasonable compensation to the Wisconsin Valley Improvement Company for headwater benefits from its developments in the Wisconsin River basin.

(2) The above-described method for determining compensation to the Wisconsin Valley Improvement Company for headwater benefits from its developments in the Wisconsin River basin is reasonable and equitable.

The Commission orders:

The aforesaid assessments from July 1, 1920, through December 31, 1963, and future assessments similarly made are approved under Section 13.1 of the Regulations under the Federal Power Act in lieu of a headwater benefit determination under subsection 10(f) of the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

CUMBERLAND NATURAL GAS COMPANY, INC., DOCKET NO. G–18740; TRUMAN DRAKE, DOCKET NO. G–18744; CREEK OIL COMPANY, INC., DOCKET NO. CI64–457; J. C. MILLER OIL COMPANY, INC., DOCKET NOS. G–18743 AND CI64–1107

ORDER DENYING MOTION TO OMIT THE INTERMEDIATE DECISION PROCEDURE

(Issued September 1, 1964)

There is presently before us for consideration a motion filed by Tartan Oil Company (Tartan), an intervener, seeking omission of the intermediate decision by the Presiding Examiner in the above consolidated proceeding. The applicants Cumberland Natural Gas Company, Inc., Creek Oil Company, Inc., and Har-Ken Oil Company, an applicant who has filed for succession to certain J.C. Miller Oil Company, Inc., interests in Docket No. G–18743, have filed a joint answer in opposition to the motion.

We have given careful consideration to the arguments supporting and opposing waiver of the intermediate decision. It appears from the motion and answer thereto that, although the record is comparatively small, there is considerable conflicting expert testimony particularly as it relates to allegations contained in the original pleadings of the parties. In instances such as this we have consistently held, based on supporting experience, that the Presiding Examiner is better able to appraise and reconcile the testimony, and to identify and evaluate the points on which the differences are irreconcilable. We do not find support for a conclusion that due and timely execution of the Commission's functions imperatively and unavoidably requires the omission of the intermediate decision procedure. In view of the foregoing, the motion must be denied.

The Commission orders:

The motion of Tartan Oil Company for omission of the intermediate decision procedure made herein is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EQUITABLE GAS COMPANY, DOCKET NO. CP64–196

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 2, 1964)

On March 6, 1964, as supplemented on June 5, 1964, Equitable Gas Company (Applicant) filed in Docket No. CP64–196 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon operation of its Kerby Gas Storage Pool (Kirby Pool) and related facilities located in Greene County, Pennsylvania, and to transfer other related facilities now used in the operation to other gas utility operations on its system, all as more fully described in the application.

Applicant estimates that it would cost approximately $2,505,000 to bring approximately 60 wells in the Kirby Pool up to the standards prescribed under the "Gas Operation, Well Drilling, Petroleum and Coal Mining Act" of Penn-

sylvania (52 Purdon's Pa. Stat. § 2101–2504). Applicant states that upgrading of the wells to conform to the requirements of the Act would not increase the usefulness of the Pool as a storage reservoir and the expenditure of $2,505,000 would render the continued operation of the Pool uneconomic. Applicant has notified the Department of Mines and Mineral Industries of Pennsylvania of its intention to abandon the storage reservoir. Approval of the proposed abandonment has been given by that Department.

Applicant further states that abandonment of Kirby Pool will not result in any reduction of gas service to its customers and that the gas in the storage pool will be withdrawn and connecting lines retired gradually during an estimated period of 13 years.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 26, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, exhibits and supplements, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Equitable Gas Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of May 9, 1944, in Docket No. G–275 (4 FPC 588).

(2) The facilities proposed to be abandoned as hereinbefore described and as more fully described in the application in this proceeding are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order permitting and approving the same should be issued as hereinafter ordered.

The Commission orders:

(A) Applicant, Equitable Gas Company, be and it is hereby permitted to abandon certain natural gas facilities and to remove certain other facilities as hereinbefore described and as more particularly described in the application in this proceeding.

(B) Applicant shall advise the Commission from time to time during the period of abandonment as to the removal and reemplacement of the facilities being removed.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITY OF KUTTAWA, KENTUCKY, DOCKET NO. CP64–279

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued September 2, 1964)

The City of Kuttawa, Kentucky (Applicant) filed in Docket No. CP64–279, an application on May 20, 1964, and a supplement thereto on July 10, 1964, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Gas Transmission Corporation (Texas Gas) to establish physical

connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for distribution and resale in the City of Kuttawa, Kentucky, and environs, all as more fully set forth in the application and supplement thereto.

Applicant proposes to construct and operate a distribution system and approximately 16.1 miles of 6-inch, 4-inch and 2-inch lateral pipeline extending from the proposed interconnection with Texas Gas to points of distribution in and near the City of Kuttawa, Kentucky. Peak day and annual natural gas requirements for the initial three year period are stated to be: 970 Mcf and 190,407 Mcf, 1031 Mcf and 262,759 Mcf, and 1099 Mcf and 286,117 Mcf, respectively.

The total estimated cost of the proposed laterals and distribution facilities for the project is $408,000.00, which Applicant proposes to defray from an A.P.W. grant of $196,000.00 by the United States government and a loan of $225,000.00 made by the Community Facilities Administration (a part of the Housing and Home Finance Agency).

The Public Service Commission of Kentucky has issued appropriate authorization for the proposed distribution system and related facilities.

On July 6, 1964, Texas Gas filed an answer to the application and stated therein it had no objection to the rendering of the requested service provided: (a) the maximum daily delivery obligation of Texas Gas did not exceed 1099 Mcf, (b) Applicant executed an acceptable service agreement, and (c) the point of delivery of natural gas to Applicant is located at the outlet side of a measuring station to be constructed by Texas Gas at the point of interconnection.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 4, 1964 (29 F.R. 11198). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated March 30, 1948, in Docket No. G–855 (7 FPC 213).

(2) Applicant, City of Kuttawa, Kentucky, is a legal entity duly authorized to sell and distribute natural gas in the State of Kentucky and has received the necessary local franchises to render the services proposed.

(3) It is necessary and desirable in the public interest to direct Texas Gas to establish physical connection of its transmission facilities with those proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under its appropriate rate schedule and a service agreement to be executed by Applicant with Texas Gas in accordance with the Commission's Regulations, up to 1099 Mcf of natural gas per day for distribution and resale as hereinbefore described.

(4) The requirement that Texas Gas serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Texas Gas, (b) require Texas Gas to enlarge its transportation facilities or (c) impair Texas Gas' ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Texas Gas for distribution in the City of Kuttawa, Kentucky and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Texas Gas Transmission Corporation be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be con-

structed and operated by Applicant, City of Kuttawa, Kentucky, as hereinbefore described and to sell and deliver up to 1099 Mcf of natural gas per day to Applicant under a service agreement to be executed by Applicant with Texas Gas in accordance with the Commission's Regulations, for the transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Texas Gas' presently filed appropriate rate schedule.

(B) Texas Gas shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service from Texas Gas as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PACIFIC AMERICAN FISHERIES, INC., PROJECT NO. 1098

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued September 2, 1964)

Application was filed on May 5, 1964 by Pacific American Fisheries, Inc. (Applicant), under Section 6 of the Federal Power Act (Act) for surrender of its license for minor Project No. 1098 located on Snowbird Creek, a tributary of Anchorage Bay, an arm of Chignick Bay, on the south coast of the Alaska Peninsula in the Third Judicial Division, Alaska, and affecting lands of the United States.

According to the application, Applicant desires to terminate the license because the decline in salmon runs and high operating costs of the cannery served by the project power makes the continued operation of the cannery economically unsound.

The current license, License No. 4, was issued on December 28, 1960, 24 FPC 1195, for a period of 10 years, effective as of September 9, 1960. Annual charges under the license in the amount of $15.00 have been paid through December 31, 1963, and Applicant's copy of the license instrument was returned with the application.

By letter dated July 16, 1964, the Department of the Interior reported that the lands of the United States formerly occupied by the project have been restored to a condition satisfactory to the Department, and that the latter has no objection to Commission acceptance of surrender of the license.

The Commission finds:

Acceptance of surrender of the license for the project is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 1098 is hereby accepted, effective as of July 16, 1964, subject to the payment of annual charges through said date in the amount of $8.11.

OPINION NO. 434–A

SHELL OIL COMPANY, OPERATOR, ET AL., CI62–1037; HUMBLE OIL & REFINING COMPANY, CI63–383; THE SUPERIOR OIL COMPANY, CI63–409

MEMORANDUM OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING

(Issued September 2, 1964)*

Syllabus

1. Under any test, Court or Commission applied, Aneth prices are not in "suspect" category. P. 686.
2. Prices permanently certificated in *Aneth* case, and all subsequent permanently certificated prices in same area in noncontested proceedings, are comparable under all Commission and Court criteria, to prices here. P. 686.
3. Having failed to specify any distinguishing features in conditions of exploration, production and marketing between the two fields, Commission *concludes* Interveners' contentions are without merit. P. 686.
4. Commission *denies* applications for rehearing.
   Commissioner Black *dissenting.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

O'CONNOR, *Commissioner:*

This order relates to the merits of applications for rehearing filed by the State of California, Public Utilities Commission of the State of California, Southern California Gas Company and Southern Counties Gas Company of California with respect to our Opinion No. 434 and Order issued July 6, 1964, 32 FPC 34.

In Opinion No. 434 we found the in-line price for the sales in question to be 17.7 cents per Mcf and that certification of the initial contract rate would be in the public interest and will serve the public convenience and necessity. The aforementioned applicants, interveners in the certificate proceeding, principally urge that the Commission reconsider its decision and condition the certificates to 13.0 cents per Mcf which, they assert, is consistent with the price in the San Juan Basin.

Opinion No. 434 carefully set forth the position of the parties on each of the issues, analyzed the evidence presented and set forth our reasons in support of our conclusions. In brief, the issues raised by the applicants were fully considered in our original Opinion and Order and no purpose will be served in repeating our discussion except for the comments below.

In reaching our determination of an in-line price, we compared the proposed sales to sales in the same area which have already been subjected to the *CATCO* doctrine[1] and judicially approved.[2] Moreover, we underscored the fact that all evidence of record in this proceeding compelled a finding that the gas after processing is wholly comparable to that sold to El Paso at the tailgate of the Aneth plant. Further, our examination of the record establishes that the residue

*Affirmed, *sub nom. People of the State of California* v. *F.P.C.*, 353 F. 2d 16 (CA9–1965).
[1] *Atlantic Refining Co.* v. *P.S.C.*, 360 U.S. 391 (1959).
[2] *Texaco Inc., et al.* v. *F.P.C.*, 290 F. 2d 149 (CA5–1961).

volumes available to El Paso from the East Boundary Butte area—after treating charges ranging from 3.2 to 4.65 cents per Mcf have been deducted—will cost the pipeline, and consequently the consumer, approximately the same amount per Mcf as the gas purchased in the San Juan Basin.

Absent minor, but considered, distinctions[2] between the sales certificated in Opinion No. 335, 23 FPC 369, and the gas produced at East Boundary Butte, the record makes it pointedly clear that the sales from East Boundary Butte are comparable to the Opinion No. 335 sales.

The gas produced from Boundary Butte, East Boundary Butte and Aneth is all delivered into the Aneth pipeline. The Aneth, Boundary Butte and East Boundary Butte fields are all located in the Southeast Paradox or Blanding Basin. These fields are within eight miles of one another and the average producing depths of the wells are almost identical. Drilling conditions are similar. Although the type of gas produced at Aneth differs from that at East Boundary Butte, the quality differences are eliminated prior to the price computation to the end, as noted in the Opinion, that "the gas, after processing, is of approximately the same pipeline quality and Btu content as the residue gas available to El Paso at the tailgate of the Aneth plant." Conversely, the evidence clearly shows, as it did in the Aneth case, that the fields in the Southeastern Paradox Basin are not comparable with the San Juan Basin fields. They lie in a different geological basin, are located between 50 and 75 miles away, were developed at a much later point in time and have different drilling conditions and produce from different horizons. Further, under any test which has been applied either by the courts or the Commission, the Aneth prices and the Boundary Butte prices are not in the "suspect" category.

The prices permanently certificated in the Aneth case, and all subsequent permanently certificated prices in the same area in noncontested proceedings, are comparable under all criteria promulgated by this Commission and the courts to the prices in question in the instant proceeding. The applicants have failed to specify any distinguishing features in the conditions of exploration, production and marketing between the two fields in question and we must conclude that their contentions are without merit.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed by the State of California, Public Utilities Commission of the State of California, Southern California Gas Company and Southern Counties Gas Company of California present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 434 and Order on July 6, 1964, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The applications for rehearing filed by the State of California, Public Utilities Commission of the State of California, Southern California Gas Company and Southern Counties Gas Company of California are hereby denied.

Commissioner Black *dissenting* for the reasons set forth in the dissenting statement appended to Opinion No. 434 and order issued July 6, 1964.

---

[2] In the East Boundary Butte area the producers are required to gather and, if necessary, compress the gas; in the Aneth and Boundary Butte fields these services are performed by the pipeline, El Paso.

OPINION NO. 428–A

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63–1

OPINION AND ORDER ON REHEARING

(Issued September 2, 1964) *

Syllabus

1. Commission uses test year of twelve months ending March 31, 1962, adjusted to include extensive facilities put in service before November 30, 1962, since otherwise base period would not have been representative of future. P. 689.
2. Because additional facilities increased capacity, and rates for future are involved, it is necessary to use volumes of gas estimated for delivery in 1963 by means of facilities put into service up to November 30, 1962—1963 sales, based on estimates of pipeline's customers, constitute known change ascertainable with reasonable accuracy. P. 689.
3. Under *Mississippi River Fuel Corp.* Commission could not accept affiliated producer's filed rates untested. P. 689.
4. Commission *modifies* prior order to conform to Court stay so that pipeline's purchased gas costs shown by record shall be used for interim period as basis of computation undiminished by affiliated producer's rate case reductions. P. 690.
5. Commission *rejects* contention of error in failure to use liberalized depreciation and guideline-rate depreciation in computing pipeline's Federal income tax allowance, even though pipeline did not make use thereof in tax returns. P. 690.
6. Line of questioning attempting to show motivation for not utilizing such depreciation methods [*Supra* note 5] for reducing taxes was relevant and should have been allowed. P. 690.
7. Since 1963 balance of accumulated gas prepayments represents an abnormal situation, it should not be included in working capital but the amount of average test year balance of such prepayments should be subject to tax deduction. P. 690.
8. Commission frequently adjusts test year costs for known changes occurring within a reasonable time afterwards, but will not take into account changes too remote in time. P. 691.
9. It was proper to adjust Federal income tax rate to 50 percent in 1964, since it represented a known change resulting from Congressional action occurring less than two years after end of test year. P. 691.
10. Commission questions, as matter of regulatory policy, further adjustment of Federal income tax rate to 48 percent in 1965, *defers* decision thereon in accordance with prior order. P. 691.
11. It would stultify rate regulation if for life of a project Commission were limited by methods of cost allocation used by United in a certificate proceeding. P. 692.
12. That at one time in past differential between commodity rates in two zones was less than 3.5 cents is not controlling, anymore than that in subsequent rate settlements it was more—as system operation changes, it may be possible to decrease or eliminate such differential. P. 692.

---

* See Opinion 428–B, *infra*, p. 879 rejecting application for rehearing in part, and denying stay. Set aside, *United Gas Pipe Line Co.* v. *F.P.C.*, 357 F. 2d 230 (CA5–1966); affirmed 386 U.S. 237 (1967).

13. While departure here from *Seaboard* rate design method is substantial, there is no absolute way to forecast precisely the effect of a given departure. P. 693.
14. While it does not appear that pipeline's commodity charge would prevent it from competing with gas from southern Louisiana, there is no need that it be put in a position to compete with all producers. P. 693.
15. Modification of rate filing and refund requirements herein ordered could, in some instances, result in United being unable to recover revenues representing full cost of service from January 1, 1963—Commission *notes* this is one of the hazards assumed by a natural-gas company initiating an increase in rates. P. 693.
16. Section 4 of the Natural Gas Act is not a device by which a regulated pipeline can sweep away regulatory requirements—United's obligation to make rate adjustments prescribed herein shall continue until otherwise ordered. P. 694.
17. Commission is concerned with protection of public interest involved in "* * * selling natural gas for ultimate distribution to the public." Merely ordering pipeline to make refunds to its immediate customers could not fully discharge Commission responsibilities. P. 695.
18. Purpose in instant case was to establish a procedure for presentation of evidence which would expedite rate proceedings—no additional opportunity need be afforded intervenors to answer each other as well as United. PP. 695, 696.
19. Upon rehearing, Commission *denies* rehearing in part; *confirms* prior opinion with certain modifications.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

BLACK, *Commissioner:*

On June 30, 1964, 31 FPC 1629, we granted rehearing for purposes of adequate consideration of our Opinion and Order No. 428 issued May 14, 1964, 31 FPC 1180, after applications for rehearing were filed by Mississippi Valley Gas Company on June 8, 1964, United Gas Pipe Line Company and Public Service Commission of the State of New York on June 11, 1964, Mississippi River Fuel Corporation, Western Kentucky Gas Company, Texas Gas Transmission Corporation, Indiana Gas and Water Company, Inc., and Louisville Gas and Electric Company on June 12, 1964, and Texas Eastern Transmission Corporation, Southern Union Gas Company, Laclede Gas Company, Willmut Gas and Oil Company, Natural Gas Pipeline Company of America and Memphis Light, Gas and Water Division on June 15, 1964.

The Independent Natural Gas Association of America by letter of June 15, 1964, also filed a request for rehearing, reconsideration and permission to participate.

In our order of June 30, 1964, we noted that we had not yet determined the specific areas, if any, to which we wished to give further consideration. We have studied the Opinion and Order and the record in the light of the applications for rehearing, and except for necessary clarification and other minor changes discussed below, we find that there are but three respects in which we need change our order. One relates to purchased gas costs discussed below. The other relates to the disposition of the refunds to be made by United. On this latter matter we shall modify our original order and order further proceedings wherein opportunity will be afforded the Independent Natural Gas Association and other parties to file briefs at the appropriate time. Finally, as explained below, we will give further consideration to whether, as provided in the original

order, United's rates and refunds should be adjusted for the corporate income tax reduction to 48 percent in 1965, and are affording opportunity to file answers to United's application for rehearing on this matter in accordance with our June 30, 1964 order.

Most issues raised on rehearing essentially restate the parties' positions throughout these proceedings. It is our view that on most points our original opinion clearly expresses our position and reasoning, and no purpose would be served by further discussion. We shall thus turn to those points where we believe that further discussion is warranted following, in general, the order of the original opinion.

Test Year

The question of the test year is involved in a number of United's contentions and while it is unnecessary to discuss all of the issues, we must emphasize that we are not using a 1963 test year. We are using a test year defined by a base period of twelve months ending March 31, 1962, adjusted to include the extensive facilities put in service before November 30, 1962. Without this adjustment and others made necessary by it, the base period would not have constituted a test year representative of the future. Because the additional facilities increased United's capacity, and we are setting rates for the future, we found it necessary to use volumes of gas estimated by United for delivery in 1963 by means of its facilities put in service up until November 30, 1962. These sales, based on estimates of United's customers, in our opinion, constitute a known change whose magnitude is ascertainable with reasonable accuracy.

United's test year contention apparently underlies its objection to much of the basis of our cost of service. For example, United objects to our figure of $10,772,145 for interest on long-term debt. It says we improperly used material from the excluded Exhibit 46, and should have used the 1963 figure taken from its Annual Report on Form 2. We have in fact derived this figure from the data contained in United's Form 2, but consistent with our test year, the 1962 figure was used. Thus contrary to United we did not use the excluded Exhibit 46. The 1962 Form 2 shows total bonds outstanding on December 31, 1962, to be $239,381,000 and the average rate of interest to be 4.5 percent, resulting in a deduction for interest expense of $10,772,145.

Cost of Service

United objects to our treatment of the cost of gas purchased from its affiliate, Union Producing Company. Under *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619 (CADC), we could not accept Union's filed rates untested. To avoid duplicative proceedings we made use of the *Union* case in Docket No. G–13811, *et al.*[1] With the exception of four out of Union's numerous rate schedules under three Docket Nos. G–14114, G–14553 and G–17589 we provisionally accepted Union's filed rates in determining United's rates subject however to the results to be determined in the *Union* case on the basis of the up-to-date test year of 1963. Since Union's rate increases relating to these four rate schedules had already been disallowed in the earlier phase of the *Union* case, we reduced the allowance for payments to Union by these disallowed rate increases.

United argues that this reduction might result in its being unable to recover its costs, if the Commission is reversed on court appeal in the earlier phase of the *Union* case. We note that the Commission's order in the *Union* case has

[1] See *Union Producing Company, et al.*, 31 FPC 41, Opinion No. 414, Docket No. G–13811, *et al.*, January 9, 1964.

been stayed. To avoid the result of United's argument and also the possibility of loss from Union's rate increases being allowed in whole or in part in the later phase of the *Union* case we shall modify our order to conform to the stay so that the purchased gas costs shown by the record in the amount of $249,893,776 shall be used for an interim period as a basis of computation undiminished by the *Union* case reductions in the amount of $724,021. As discussed below, this purchased gas allowed is subject to further reductions because of producer rate decreases becoming effective before January 1, 1963, and later. The result of this modification of our order is not of substantive significance, because the allowance for gas purchased from Union is subject as before to the determination made in the later phase of the *Union* case based on the test year 1963. The effect is thus merely to postpone any purchased gas cost reduction for Union's gas until a final determination is made in the *Union* case.

The Memphis Light, Gas and Water Division contends that we erred in failing to use liberalized depreciation and guideline-rate depreciation in computing United's federal income tax allowance, even though United did not make use of these methods of depreciation in its tax returns. In our opinion Memphis has not shown on this record that computation of a cost of service assuming United's use of these methods of depreciation, which initially provide greater tax deductions, is necessarily in the public interest. The record shows that United has not used liberalized depreciation in the past, indicating that the company's present practices are not merely a response to regulatory policy. Counsel for Memphis attempted on cross-examination of United's witnesses to show that the motivation for not utilizing these methods for reducing taxes was to keep United in a substantial tax position against which could be written off tax losses generated in other branches of the business. The examiner sustained objections to these questions. We feel this line of questioning was relevant and should have been allowed. The record shows, however, (see appendix 5 to original opinion) that United's taxable income is so greatly in excess of losses, and possible losses, on the part of its affiliates that the inquiry here attempted would not have revealed anything of significance. Consequently, it would not be in the public interest to reopen the record on this point.

United contends that in allowing accumulated gas prepayments as a part of working capital we were in error in using the amount of $5,937,060 representing an average test year balance of prepayments rather than the amount of $15,340,800 related to estimated 1963 sales or the amount of $19,829,638 representing prepayments as of December 31, 1963. We note that United itself used the $5,937,060 amount in the proposed findings attached to its exceptions filed July 5, 1963, although the examiner had used the $15,340,800 amount (reduced by taxes). Also, while we used those 1963 sales of gas representing volumes of gas deliverable by the facilities included in the rate base herein, as noted earlier, we are not employing a 1963 test year or 1963 operations as a basis of rate making. The amount of $5,937,060 also reflects the record indication that the accumulated prepayments will be eliminated in the near future. It may be that our statement on page 1201 of our opinion is a little too optimistic interpretation of United's ability to take its minimum take-or-pay contract quantities. However, the record is not precise on this matter, which is uniquely within United's knowledge, and it appears that the accumulated prepayments will be made up soon after 1965 if not in that year. Thus the 1963 balance of $15,340,800 represents an abnormal situation and should not be included in the working capital, but the amount of $5,937,060, subject to tax deduction, is appropriate.

United urges that in computing income taxes our deductions from return shown in Appendix 4 to our original opinion in the amount of $14,350,856 are

excessive with respect to interest on long-term debt already discussed and with respect to the amount $2,740,569 representing the balance of tax depreciation over book depreciation, which it says is excessive by $456,548. Here United is insisting on using 1963 figures. The tax figure in the record corresponding most closely to the base year ended March 31, 1962, are the figures for the calendar year 1961, and we have used these with respect to this item and other items deducted in computing the tax allowance.

United further objects to our requiring rate reductions and refunds based on corporate income tax rate reductions to 50 percent in 1964 and 48 percent in 1965, pointing out that there may be increases in other cost of service items. Frequently we adjust the test year costs for known changes occurring within a reasonable time afterwards, but we will not take into account changes that are too remote in time, which might destroy the representative character of the test year. See *Panhandle Eastern Pipe Line Co.*, 25 FPC 787, 795; remanded on other grounds *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 305 F. 2d 763 (CADC, June 30, 1962). In the present proceeding the base period used for the test year terminated March 31, 1962, but was adjusted for newly constructed facilities going into service before November 30, 1962, and for 1963 sales that could be handled by the adjusted facilities. On February 26, 1964 the corporate income tax was changed[3] making a 50 percent rate effective January 1, 1964. The 48 percent rate was not made effective until January 1, 1965. In this proceeding we have ordered the filing of rates that look to the future based upon a test year that has been extensively adjusted to reflect United's changed operations. We think that the adjustment of the rate to 50 percent in 1964 was proper since it represented a known change resulting from Congressional action occurring less than two years after the end of the base period used for the test year. In prescribing this adjustment, we did not, of course, mean thereby, to preclude United from reflecting the full effect of all the adjustments contemplated by the new tax law, Public Law 88–272. With respect to the further adjustment to 48 percent in 1965, we have some question as a matter of regulatory policy whether such an adjustment extends too far in the future. Therefore, we shall defer decision in this question and, in accordance with our order of June 30, 1964, shall provide opportunity to file answers to United's application for rehearing on this issue.

Allocations

Most of the contentions with respect to the subject of allocations have been made previously. It is argued that Method 8 should be retained for allocations, that the Southwest Zone should include more territory (Eugene Island), or less territory (the proposed Lafayette Zone), and that the rate differential established between the northern zones is too large, or too small.

As to the general allocation method our objective as expressed in our original opinion was to reflect in the allocation prescribed the evolution of United's system. There we traced the growing interdependence of the various parts of United's system and looked forward to further integration in the future. Thus we would not be justified in trying to isolate certain portions of United's system from rising gas costs by establishing different zones or shifting zone boundaries as United and some of the interveners would have it. On the other hand we did not in the present proceeding go to a complete roll-in of costs as we have in other cases, for the operations of the system had not become so interdependent as to justify this method or the drastic changes in price structure

[3] Section 121 of Public Law 88–272 amending Section 11 of the Internal Revenue Code.

which might result. While we characterized United as a fully integrated pipeline in our Opinion No. 401, *United Gas Pipe Line Company*, 30 FPC 560, Docket No. CP62–161, issued August 26, 1963, the question there was one of jurisdiction over the operations of only one part of United's system.

Texas Gas argues that we failed to give consideration to its offer of proof that in Docket No. CP61–151 the new line from south Louisiana was authorized and additional sales were undertaken by United to its pipeline customers, including Texas Gas, upon the basis of Method 8. However, there is nothing in the examiner's decision in that docket or the Commission's order affirming it which makes the grant of the certificate dependent on Method 8 (28 FPC 1035, 1039). It would indeed stultify rate regulation if for the life of a project we were limited by the methods of cost allocation used by the applicant in the certificate proceeding.

Natural Gas Pipeline Company of America argues that the examiner and the Commission should have prescribed a Southwest Zone rate for it rather than requiring it to pay the PL-C rate for the Central Zone filed by United. The basis of its argument is that it receives delivery from United at Goodrich, Texas, well within the Southwest Zone. However, the Commission determined that Natural should be classified with United's Central Zone customers because it is a beneficiary of the new line from south Louisiana to Sterlington. As the record shows, the additional gas available from Louisiana permits a smaller take from Texas in the Agua-Dulce-Sterlington line and thus leaves capacity available to serve National at Goodrich. In fact, United would not be able to make deliveries to Natural at Goodrich without the gas from the Louisiana line. The record does indicate that United might have been able to meet its obligations to Natural by the construction of additional horsepower south of Goodrich, but as the system is now operated the sale to Natural is made possible by the delivery of Louisiana gas at Sterlington, and in our opinion Natural should be subject to the PL-C rate.

Several parties object to our prescribed zone rate differential providing commodity rates in the Central Zone approximately 3.5 cents lower than in the Jackson Zone. This differential is less than the cost differential that would be produced by the application of Method 8, and is a judgment figure designed to reflect the movement toward greater integration of the system. We do not think it is controlling that at one time in the past the differential was less than 3.5 cents, any more than that under subsequent rate settlements it was more. As the operation of the system changes, it may be possible to decrease it or eliminate it.

Rate Design

Like the rate differential between the northern zones the question of the relationship between the demand and commodity components of United's rate is contested from both sides. Several of United's pipeline customers and United itself contend that we made the demand component too low and the commodity component too high. On the other hand Laclede and Memphis contended we used too high a demand component and too low a commodity component. Both sides contend that the record does not support the result we reached.

The parties have raised no new question here except to contend that the results are inconsistent with our recent *United Fuel* opinion. As we have indicated, there is no mathematical way on the basis of this record, or on the basis of any evidence the parties could have adduced, that can be used to derive an exact result. In our recent opinion in *United Fuel Gas Co.*, 31 FPC 1342, Opinion No. 430, Docket No. G–20270, issued June 2, 1964, we discussed the infirmities of the *Seaboard* formula,[3] under which fixed costs and expenses are usually assigned

[3] *Atlantic Seaboard Corp., et al.*, 11 FPC 43.

50 percent to demand and 50 percent to commodity and variable costs are normally assigned 100 percent to commodity. In *United Fuel*, as in many other cases, we have prescribed departures from the *Seaboard* formula with respect to rate design, and we have done nothing here that is inconsistent with *United Fuel*.

While the departure here from the *Seaboard* method in rate design is substantial, though not as great as that proposed by United, there is no absolute way to forecast precisely the effect of a given departure. An extreme shift from one rate design to another would have a detrimental effect on United's operations for the reasons expressed in our original opinion. We cannot test our orders before applying them, but we have sought to reverse the trend of United's rates towards the demand component, and have further reversed this trend by providing that cost reductions be applied to the demand component until the demand component bears the same relationship to the commodity components as it did in the G–1142 settlement made in 1954.[4]

United and several of the interveners vigorously contest our order in this respect saying that we have disregarded competitive conditions, particularly competition from producers in establishing too high a commodity and in providing that cost reductions be applied to the demand component. We take notice that the larger blocks of new gas will be coming from the southern Louisiana area. There our guideline rate at 14.65 psia is 19.01 cents for the area within the Federal domain and 20.72 cents for the area within the State jurisdiction. For comparison with the prescribed United commodity charge of 18.16 cents at 14.9 psia, or 17.86 at 14.65 psia, in the Central Zone, transportation costs would, of course, have to be added to allegedly competing producer prices so that it does not appear that United's commodity charge would prevent it from competing with gas from southern Louisiana. Apart from this we do not see that United must be put in a position to compete with all producers.

Rate Filings and Refunds

A number of the interveners object to the apparent effect of our ordering paragraph (B) in authorizing United to file increased rates effective January 1, 1963. This was not our intention and we will amend paragraph (B) accordingly so as to clarify our order in this regard. The result could be that United will be unable to recover revenues in some instances representing its full cost of service from January 1, 1963, but this is one of the hazards assumed by a natural-gas company initiating an increase in rates. *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145. In spite of this possible result we would not be justified in making our modified allocation and rate design effective prospectively only, as United suggests, for the facts here require that the changes in method of allocating costs be put into effect at the commencement of the period covered by these Section 4 proceedings.

The potential rate increases herein authorized are, however, actually reduced or eliminated altogether by the adjustments listed in paragraphs (C) and (D) in our order and by certain other additional adjustments relating to purchased gas costs. United apparently has misconstrued our intentions regarding giving immediate effect to producer gas cost reductions. It contends that our order would require that such reductions be given effect from January 1, 1963. It was our intention that these reductions be given effect from the date the producers were required to reduce their rates.

In addition to the purchased gas cost reductions referred to in our order occurring after January 1, 1963, we now understand that certain producer rate

[4] 13 FPC 398, 406.

reductions took effect before January 1, 1963, and were not reflected in United's exhibits in the record. These reductions should be given effect by United in making the rate filings required by paragraph (B), and we shall amend that paragraph accordingly. Of course, if any rate increases are still involved, we reaffirm our determination that United be authorized to put them into effect prospectively although we shall not order it to do so.

Controversy has also arisen over the effect of the *Union* case, already discussed in connection with the cost of service. It was our intention that the remanded *Union* case serve as a means of determining United's cost of purchased gas from its affiliate Union. Therefore, once Union's rates are determined, they should take effect for refund purposes from January 1, 1963. This is not retroactive rate making but, in effect, the severing out of an issue and the separate determination of United's correct purchased gas costs from its affiliate during the period put in issue by its filing of increased pipeline rates. We shall amend our ordering clauses to make this result clear. The reduction in Union's rates, if any, should be given effect in United's rates as prescribed by paragraphs (D) and (E) of our order.

United contends that paragraph (F) of our order is beyond our authority in that it improperly requires the filing of adjustments in rates even though the rates herein prescribed have been superseded. Paragraph (F) neither sanctions nor prevents the institution of proceedings to increase rates but provides that such action shall not supersede or terminate the requirements of our order until such time as the Commission has disposed of the issues raised by the new proceedings, and they have become final and effective pursuant to law. We are of the opinion that Section 4 of the Natural Gas Act is not a device by which a regulated pipeline can sweep away our regulatory requirements. Upon the basis of these very elaborate proceedings we have already determined the necessity for the several adjustment factors listed in our ordering clauses in order to give effect to the rate determination made here. It would be wasteful of our time and that of our available staff and contrary to the public interest if we were immediately required to determine the same questions over again in connection with new filings. United should not be able to destroy at will the effects of this proceeding. Therefore we have required that United's obligation to make the rate adjustments prescribed in this proceeding shall continue until otherwise ordered by the Commission. We note that United has put in issue the question of its authority to supersede totally the rates herein prescribed by its tender for filing of increased rates identified as Docket No. RP65–1. The staff motion with respect thereto filed August 6, 1964, and the issue therein raised will be disposed of in a separate and distinct proceeding.

Paragraph (I), of our original opinion and order, renumbered herein as paragraph (K), provided for treatment of refunds received by United from producers. In the present paragraph (K) we have modified this language to clarify it and make it consistent with the other paragraphs. We are providing that where United receives refunds from producers after January 1, 1963, including those attributable to gas purchases prior to that date, which United is already obligated to flow through to its customers pursuant to our order of March 12, 1962, 27 FPC 504, these refunds shall be retained by United subject to the further order of the Commission just as the amounts due from United itself must be retained. The effect of paragraph (K) is terminated when superseding rates become final and effective.

A number of the interveners object to the provisions of paragraph (J) of our original order requiring the pipeline customers of United and successive customers to refund to their customers refunds received from United. Funda-

mentally these parties argue that the Natural Gas Act prescribes the proper procedures for changing rates and that original ordering paragraph (J) is beyond the authority of this Commission, particularly as it purports to order refunds allocable to nonjurisdictional sales. Concededly, this is a novel question of great regulatory importance. But, we are here not concerned with the justness or reasonableness of these customers' present rates, per se. Rather, we are here faced with the proper and equitable distribution of a fund of money created by our own process. Under the Natural Gas Act we are concerned with the protection of the public interest involved in "* * * selling natural gas for ultimate distribution to the public." Merely ordering United to make refunds to its immediate customers could not fully discharge our responsibilities. We think, however, some modification of ordering paragraph (J) is appropriate to conform to the procedure recently prescribed in our order approving a settlement in *Humble Oil & Refining Company*, 32 FPC 49, Docket Nos. G–9287 and G–9288, issued July 8, 1964, where we provided that Humble should compute and report the amount of potential refunds and retain these amounts subject to further order. In general we shall follow this procedure here. United shall be required [present paragraphs (G), (H) and (I)] to hold the amounts which are computed to be subject to refund but shall be given the option whether to mingle them with its assets and employ them in its business or deposit them in escrow. As in our original opinion, we are requiring the computation of further refunds and these amounts, together with refunds received from producers, will be treated similarly [present paragraphs (J) and (K)].

As with *Humble* we shall also by separate action direct each of the pipeline purchasers to submit reports of their own setting forth whether they intend to pass on all or part of such refund amounts to their customers and the names of such customers and amounts of refund each would receive, or, if they claim the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event the reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, we shall order United to release such refund sums as well as sums due customers that are not pipelines (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from United (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds as between such pipeline and its customers. We shall apply the same procedure to amounts reported as subject to refund on later dates as required in paragraph (J) herein.

Due Process

Southern Union and Mississippi River Fuel object to rejection of evidence submitted by them on allocations and rate design after the October 1, 1962, deadline for submittal of evidence by parties other than United. They contend that we were in error even though we found that the results reached would not have been any different if the evidence had been received.

As set forth in our procedural order of August 6, 1962, 28 FPC 295, our purpose was to establish a procedure which would expedite rate proceedings where the Supreme Court has found inordinate delay. See *Atlantic Refining Co.* v. *F.P.C.*, 360 U.S. 378, 391. United was given an opportunity to present its case, the interveners and staff to answer and United to present rebuttal evidence. We do not

see that additional opportunity need be afforded the interveners to answer each other as well as United.

Apart from this, Southern Union's evidence is chiefly concerned with a separate zoning proposal by which the Texas zone would be broken into a northern Louisiana and Texas zone. As such the evidence is not in the nature of rebuttal, but is a separate proposal which should have been presented on October 1, 1962, with the evidence of the other interveners. In any case Southern Union's evidence, which we have examined, but have not admitted, would not cause us to change our allocation and rate design. The evidence would change the present zones and would establish differentials between the zones based on differences in cost, including transportation. On our part we recognize that there are differences in cost, but as the system becomes more unified these differences become less relevant. For this reason we have rejected proposals to develop further the system of zones used and have rolled together the two northern zones.

Southern Union states that the staff was permitted to abandon its testimony and evidence late in the hearing and submit new evidence although it had submitted its proposed evidence on November 16, 1962, before the hearing began on November 27, 1962. The record shows that the staff was permitted to substitute new exhibits for those originally filed to reflect gas volumes used by United. This change, of course, does not represent a change in methods of allocation and rate design.

Mississippi River Fuel's proffered exhibit (41) and explanatory testimony was directed to alleged losses which the company might suffer if the rate designs proposed by Laclede or the staff were used. Specifically, the proposed evidence assumes that Mississippi River Fuel would lose 12 billion cubic feet of industrial sales if United's rates were so designed and from that an alleged loss in payments to United for gas not taken is computed. In the first place, the same presentation could have been made without use of this evidence, for nothing is added to the record except an estimate for compressor fuel, which could have been eliminated as indicated by company counsel. Furthermore, we recognize the possible loss of industrial sales even with the substantial departure from the *Seaboard* formula employed here. This is one of the necessary compromises in rate design. Thus the formal admission of this evidence would represent a useless act. Mississippi River Fuel near the end of the hearing also made a motion to put in additional testimony on the subject of rate design. Admission of such testimony, even if relevant, would have been completely out of order and would have prolonged the proceedings without foreseeable benefit.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 428, or which, having now been considered, warrant any change in, modification of, or rehearing of such opinion and order, except as specified below.

The Commission orders:

For the purpose of effecting the changes discussed above and terminating the stay provided in our order of June 30, 1964, the ordering clauses of our order of May 14, 1964, are hereby deleted and reissued as part of this order, subject to deferral of decision with respect to the 48 percent corporate income tax reduction as provided in paragraph (O) below.

(A) The proposed increased rates filed by United referred to in finding clause (2) of our original opinion are hereby disallowed.

(B) Within 45 days from the date of issuance of this order United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission containing the rates set forth in Appendix 7 to our original opinion except that the rates shall be adjusted to reflect (1) purchased gas cost reductions in the producer rates included in the cost of service used herein, not taken into account by the original opinion, and effective as reduced charges on or before January 1, 1963, and (2) the elimination of the $724,021 reduction in purchased gas costs provided in our original order as a result of the *Union* case. Such tariff sheets shall be effective for the period January 1, 1963, through December 31, 1963. However, nothing contained herein shall be construed to authorize United to increase the dollar effect of its rates to any of its jurisdictional customers during the calendar year 1963 over the rates presently in effect subject to refund in this proceeding.

(C) Within 45 days from the date of issuance of this order United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission effective January 1, 1964, through December 31, 1964, which shall reflect the rates filed pursuant to paragraph (B) above and the following:

(i) A Federal income tax rate of 50 percent adjusted to reflect the effect of the consolidated return.

(ii) Any purchased gas cost reductions occurring after January 1, 1963, up till the date of this order with respect to any producer rates included in the cost of service used herein and conditionally effective January 1, 1963.

(iii) Final allowance of tax deductions for gas prepayments if it occurred before the date of this order.

(iv) Should rates computed according to this paragraph when applied to any of United's jurisdictional customers represent increases over those presently in effect subject to refund in this proceeding, then, United, for the period January 1, 1964, to the date of filing hereunder, shall file rates having no higher dollar effect than the rates in effect subject to refund as of January 1, 1963. For the period succeeding the date of filing through December 31, 1964, United is authorized but not required to file rates that represent increases if in accordance with paragraphs (B) and (C).

(D) Before January 31, 1965, United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission effective January 1, 1965, until changed in accordance with the Natural Gas Act or as provided herein, which shall reflect the rates filed pursuant to paragraphs (B) and (C) above and the following:

(i) A Federal income tax rate of 48 percent adjusted to reflect the effect of the consolidated return.

(ii) Adjustments listed in paragraph (C) (ii) and (iii) above if they become effective during the year 1964 after the date of this order and have not already been given effect.

(iii) Any modification of the rates of Union pursuant to the Commission's remand in Docket No. G–13811, *et al.*

(E) If any of the factors listed in paragraphs (C) and (D) become effective in the calendar year 1965 or any year thereafter, before January 31 of the succeeding year, United shall file substitute tariff sheets conforming to this opinion and satisfactory to the Commission effective as of the beginning of the year of filing until changed in accordance with the Natural Gas Act or in accordance with this paragraph (E). The changed rates so filed shall reflect the rates filed pursuant to paragraph (B) and the factors listed in paragraphs (C) and (D).

(F) The institution of proceedings by United to increase rates shall not terminate its obligation to file rates under paragraphs (D) and (E) but when such new rates have become final either as a result of a rate proceeding, approval of a settlement, or other Commission action the rate filing requirements of paragraphs (D) and (E) shall cease.

(G) United shall compute the excess of the total amounts charged and collected from January 1, 1963, until the date of this order over and above the amounts which would have been charged for sales to such customers under the rates prescribed by paragraphs (B) and (C) with interest at the rate of 7 percent per annum from the date of payment to United until the date of filing of the report required below. In making the computation it shall be assumed that the cost adjustment referred to in paragraph (C)(iii) be given effect from January 1, 1963, and those in paragraph (C)(ii) be given effect only from the dates the reduced rates are actually effective. United shall within 45 days from the date of this order submit a report to the Commission and serve a copy on each of the purchasers involved setting out by purchasers the amount of refund related to each rate schedule (showing separately the principal and applicable interest), the basis used for such determination and the periods covered. United shall retain the amounts shown in the report subject to further order of the Commission directing the disposition of those amounts.

(H) If United elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6 percent per annum on all funds thus available from a date 45 days after the date of issuance of this order to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(I) If United elects to deposit the retained refunds in a special escrow account, United shall tender for filing within 45 days of the issuance of this order an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between United and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) United, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which com-

pensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(J) Before January 31, 1965, and each succeeding year United shall file a report similar to that required in paragraph (G) showing the difference between what United charged and what it would have charged since January 1, 1963, had the cost adjustments referred to in paragraphs (C) (iii) and (D) (iii) been given effect from January 1, 1963, and those in paragraph (C) (ii) from the dates the reduced rates were actually effective. United shall likewise retain the amounts shown in such report subject to further order of the Commission and, at its option, treat them either as provided in paragraph (H) or as in paragraph (I) above.

(K) All refunds received by United from producers since January 1, 1963, including those attributable to gas purchases prior to January 1, 1963, which United is obligated to flow through to its customers pursuant to our order of March 12, 1962, 27 FPC 504, shall be retained subject to further order of the Commission, and, at its option shall be treated either as provided in paragraph (H) or (I) above.

(L) If the question of the deduction of gas prepayments for income taxes has not been finally resolved at the time of issuance of this order, and if it has not already done so, United shall establish a special reserve account on its books out of earned surplus and credit such reserve with the difference between revenues received and the revenues that would have been received if the prepayments added to working capital had been reduced by the taxes saved as a result of deducting such prepayments for income tax purposes. This reserve account shall be terminated upon transfer of the amounts involved into escrow as provided above or by paying the full amount in refunds as ordered by the Commission.

(M) Rates required to be filed by paragraphs (B), (C), (D) and (E) above that represent modifications and ajustments of the rates set forth in appendix 7 of our original order shall be designed in accordance with the requirements of Opinion No. 428 and the present opinion and order subject to the approval of the Commission.

(N) The obligations imposed on United by this order shall apply only to the period before the rates herein prescribed (and as modified by further filings required) are superseded by subsequent rates prescribed or approved by the Commission as the result of rate proceedings or settlements.

(O) The effectiveness of those portions of this order, relating to the adjustment of United's rates and refunds by reason of the reduction of the corporate income tax rate to 48 percent in 1965 is deferred pending further order of the Commission. With respect to this issue, answers to United's application for rehearing may be filed on or before September 15, 1964.

(P) The examiner's decision issued June 17, 1963, herein to the extent not inconsistent with Opinion Nos. 428 and 428–A and with this order is hereby adopted as part of Opinion No. 428.

(Q) Exceptions not granted herein are hereby denied.

(R) The relief requested in the applications for rehearing or reconsideration is hereby denied except to the extent expressly granted and Opinion No. 428 is confirmed as the opinion of the Commission except to the extent modified herein.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP61-311

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 4, 1964)

On July 7, 1964, Arkansas Louisiana Gas Company (Applicant) filed an application to amend further the Commission's order issued November 21, 1961, 26 FPC 749, in Docket No. CP61-311, as amended, by extending until July 22, 1965, the term of sale of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) authorized by said order, as amended, all as more fully set forth in the application to amend.

The subject order, among other things, authorized Applicant to sell and deliver at intersecting points in Harrison County, Texas, and Grant County, Arkansas, a maximum annual volume of 8,125,000 Mcf (14.65 psia) of natural gas to Texas Eastern for a period of one year from the date of initial delivery, which date was July 22, 1961. By subsequent orders the authorization was extended twice for one-year periods, so that the present authorization expired on July 22, 1964.

The subject application indicates that the arrangement has worked out very satisfactorily for both parties and that the deliver-only-when-available privileges of Applicant and the purchase-only-when-needed privileges of Texas Eastern offer ideal flexibility for both. Further, it appears that due to the geographical differences of market areas and due to the movement of cold-front weather patterns in these different market areas, it is not uncommon for Applicant to have maximum volumes available during periods of Texas Eastern's peak demands.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on August 13, 1964 (29 F.R. 11613). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued November 21, 1961, as amended, in Docket No. CP61-311 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued November 21, 1961, in Docket No. CP61-311 be and the same is hereby further amended by extending to July 22, 1965, the term of the sale of natural gas by Applicant to Texas Eastern authorized by said order. The maximum annual volume of natural gas sold during the extended term from July 22, 1964, to July 22, 1965, shall be 8,125,000 Mcf at 14.65 psia.

(B) In all other respects, said order, as amended, shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CENTRAL INDIANA GAS COMPANY, DOCKET NO. CP64-287

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 4, 1964)

On June 3, 1964, Central Indiana Gas Company (Applicant) filed in Docket No. CP64-287 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to deliver natural gas to Applicant by means thereof for distribution and sale in the City of Montpelier, Indiana, and its environs, all as more fully and particularly described in the application.

Applicant proposes to construct and operate a lateral pipeline from the point of connection on Panhandle's main line in Wells County, Indiana, to the town border station at Montpelier and to construct a distribution system in the said community where it will provide the proposed service.

The application shows the estimated third year peak day and annual natural gas requirements for Montpelier and its environs to be 888 Mcf per day and 231,915 Mcf per year respectively.

The total estimated cost of the facilities proposed to be constructed by Applicant is $268,541, which will be financed from internally generated funds.

The total estimated cost of the facilities to be constructed by Panhandle is $29,500, which will be financed from funds on hand.

Applicant has obtained by ordinance appropriate authorization from the City of Montpelier and states that no further authorization is required.

On June 18, 1964, Panhandle filed its answer to the application herein stating that it has no objection to providing the proposed service to Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 6, 1964 (29 F.R. 11395). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) Applicant, Central Indiana Gas Company, is a public utility company organized and existing under the laws of the State of Indiana and is engaged in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant up to a maximum daily volume of 888 Mcf of natural gas per day as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(5) The requirement that Panhandle serve Applicant, as proposed, will not place any undue burden upon Panhandle nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to deliver to Applicant up to a maximum daily volume of 888 Mcf of natural gas as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(C) Panhandle shall report to the Commission in writing the date of commencement of service to Applicant for Montpelier within ten days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64–179; PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP64–194

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued September 4, 1964)

On March 2, 1964, as amended on April 23, 1964, Panhandle Eastern Pipe Line Company (Panhandle) filed in Docket No. CP64–194 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and for authority to abandon certain other facilities and the related sale of natural gas, all as more fully set forth in the application, as amended.

Panhandle states that it presently sells natural gas to The Gas Service Company (Gas Service) for resale and distribution in the communities of Paola and Osawatomie, Kansas, and Freeman and Harrisonville, Missouri. The gas sold for service to Paola and Osawatomie is delivered by Panhandle by means of lateral lines; the gas sold for service to Freeman and Harrisonville is transported and delivered to said communities by Cities Service Gas Company (Cities Service).

Panhandle proposes herein to sell to Gas Service approximately 9,530 feet of 8-inch pipe and 95.6 feet of 6-inch pipe of its Paola lateral and approximately 8,238 feet of 6-inch pipe of its Osawatomie lateral. Gas Service will be able to utilize these lines to serve customers located near said lines without having to construct new mains. Further, Panhandle proposes to construct and operate new metering and regulating stations for service to Paola and Osawatomie from the new connecting points with said laterals. Panhandle also proposes to abandon and retire the existing mainline regulator for service to Osawatomie.

Further, Panhandle proposes to abandon service to Freeman and Cities Service proposes in Docket No. CP64–179 to sell gas to Gas Service for resale and distribution in Freeman. Panhandle will continue service to Harrisonville and proposes to construct and operate a new metering and regulating station on its main line, approximately 1½ miles north of said community, necessary to deliver gas directly to Gas Service for service to Harrisonville. Gas Service will construct and operate an 8-inch lateral from Harrisonville to the proposed new mainline station. The proposed new arrangement for service to Freeman and Harrisonville will enable Cities Service to abandon its transportation lines for said communities. Such lines are stated to be badly deteriorated and Cities Service is experiencing a great deal of leakage and desires to abandon them by retirement as proposed in Docket No. CP64–179.

Panhandle also requests authority to abandon its metering and regulating station presently used to serve Harrisonville and Freeman.

The application shows Panhandle's total estimated cost of facilities, including retirement costs, to be $68,540, which costs will be financed from funds on hand.

On February 11, 1964, Cities Service filed in Docket No. CP64–179 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Gas Service for resale and distribution in Freeman and for authority to abandon certain other facilities, all as more fully set forth in the application.

Specifically, Cities Service proposes to construct and operate new meter and regulator facilities to sell natural gas to Gas Service for resale and distribution in Freeman, and environs, and thereafter to abandon by retirement approximately 7.4 miles of its Harrisonville 8-inch line and 4 miles of its Freeman 3-inch line.

The application shows the total estimated cost of the facilities proposed in Docket No. CP64–179 to be $2,768, which cost will be financed from treasury cash. The application shows further an estimated net salvage value on the lines to be reclaimed of $5,500.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, amendment and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(3) The facilities hereinbefore described, as more fully described in the application in Docket No. CP64–179 and in the application, as amended, in Docket No. CP64–194, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Cities Service and Panhandle and the transportation and sale of natural gas proposed by Cities Service are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The construction and operation of the proposed facilities by Cities Service and Panhandle and the proposed transportation and sale of natural gas by Cities Service are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The facilities to be abandoned by Cities Service and the facilities and sale to be abandoned by Panhandle, as hereinbefore described, are subject to the jurisdiction of the Commission and the abandonment of such facilities and sale is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(6) Such abandonment by Cities Service and Panhandle, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(7) Cities Service and Panhandle are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificates issued hereinafter in Docket Nos. CP64–179 and CP64–194 and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas, and authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities, all as hereinbefore described and as more fully described in Cities Service's application in Docket No. CP64–179 and Panhandle's application, as amended, in Docket No. CP64–194, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in Docket Nos. CP64–179 and CP64–194 shall be completed and placed in actual operation and the sale and delivery of natural gas by Cities Service authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) Permission for and approval of the abandonment of facilities by Cities Service and of facilities and sale of natural gas by Panhandle hereinbefore described, all as more fully described in Cities Services' application in Docket No. CP64–179 and in Panhandle's application, as amended, in Docket No. CP64–194, be and the same are hereby granted.

(E) Cities Service and Panhandle shall advise the Commission of the date of their respective aforesaid abandonments within 10 days of the date thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

KANSAS-COLORADO UTILITIES, INC., DOCKET NO. CP65–3

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 4, 1964)

On July 2, 1964, Kansas-Colorado Utilities, Inc. (Applicant) filed in Docket No. CP65–3 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and

operation of approximately 5.4 miles of 4-inch lateral pipeline together with two metering stations to enable Applicant to connect to its Hugoton Field, Kansas—Springfield, Colorado, transmission pipeline a new source of natural gas supply for its presently served Springfield, Colorado, market area, all as more fully set forth in the application.

Gas purchases from three producers in the West Sparks Field (Hugoton) in Kansas will total approximately 588 Mcf daily, and will be at a price of 13.5¢ per Mcf (14.65 psia).

The cost of the proposed facilities is estimated to be $30,652, which will be defrayed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Kansas-Colorado Utilities, Inc., a Kansas corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 24, 1945, in Docket No. G–577 (4 FPC 1026).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Kansas-Colorado Utilities, Inc., authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 12 months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

K–B COMPRESSION COMPANY, INC. (OPERATOR), DOCKET NO. RI60–247

ORDER APPROVING OFFER OF SETTLEMENT

(Issued September 4, 1964)

On July 16, 1964 K–B Compression Company, Inc. (Operator) (K–B) filed an Offer of Settlement pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. The proceeding in Docket No. RI60–247 relates to the jurisdictional sale of natural gas under K–B's FPC Gas Rate Schedule No. 2 to Lone Star Gas Company (Lone Star) in Stephens County, Oklahoma (Oklahoma "Other" area). The proposed favored-nation rate increase from 11¢ to 16.8¢ per Mcf at 14.65 psia, designated as Supplement No. 4 to K–B's FPC Gas Rate Schedule No. 2, was suspended and subsequently became effective subject to refund under a trust arrangement on April 10, 1961.

In its offer, K–B proposes a settlement rate of 11¢ per Mcf, with refunds, including applicable interest, of 70% of the monies collected subject to refund during 1961 and 1962 and 100% of the monies collected in excess of the proposed settlement rate thereafter.

K–B assigned its interest in the sale involved herein to Pan American Petroleum Corporation (Pan American), effective on June 24, 1963. No sales of gas were made subsequent to the acquisition by Pan American. By order issued November 12, 1963, in Docket No. CI64–401, Pan American was permitted to abandon the sale because of a unitization agreement, the effect of which was to discontinue the sale. Consequently, the proceeding in Docket No. RI60–247 involves a "locked-in" period from the date of the effectiveness of the rate subject to refund, to the date of assignment to Pan American.

By order issued August 6, 1964, 32 FPC 529, in Docket Nos. RI61–96 and RI62–536 in approving a settlement for Jack W. Grigsby, we indicated we would approve refund proposals of small producers in settlement cases on the basis set forth by K–B in its instant offer. In the Grigsby case we required as a condition to our approval of that settlement a moratorium on rate increase filings. Since the subject sales have been discontinued due to a unitization agreement, such a moratorium here would be of no effect.[1] While a moratorium provision is one of the more important aspects in a settlement case, we conclude under the special circumstances presented here that it is appropriate to approve K–B's settlement offer.

For all of the reasons set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287 *et al.*, 32 FPC 49, we shall require K–B to retain the amount of refunds, with interest, ordered herein in trust[2] until

[1] K–B has one other rate schedule on file with this Commission providing for the sale of gas at a life of the contract rate of 8¢ per Mcf.

[2] In view of the fact that K–B was required to place the amounts collected subject to refund in trust, we do not consider it appropriate as in the *Grisby* case to give K–B the option to utilize the refundable amounts in its business operations. With respect to those amounts now held in trust which are in excess of the amounts to be refunded, plus interest, K–B upon compliance with the provisions of this order may remove such amounts from the trust fund.

further order directing the nature of their disposition and also to submit within 45 days of this order to the Commission and to Lone Star a detailed report setting out the amount of refund related to the instant rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct the pipeline purchaser within ten days from the receipt of such report to submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its customers and the names of such customers and amounts of refund each would receive, or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by K–B, (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Lone Star (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

We find that approval of the proposed settlement, as conditioned herein would serve the public interest.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by K-B on July 16, 1964, and as herein conditioned in the public interest is appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by K-B on July 16, 1964, is hereby approved in accordance with the provisions of this order.

(B) K-B shall compute the difference between the rate collected subject to refund and the related settlement rate for the period such rate was collected subject to refund, to the date of this order, together with interest as specified in the above docket to the date of this order, in accordance wih the percentages set forth in K-B's offer. K-B shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on Lone Star setting out the amount of refund related to the subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination and the period covered.

(C) K-B shall retain the refund amounts shown in the report required under paragraph (B) above in their present trust fund, subject to further order of the Commission directing the disposition of those amounts.

(D) Upon compliance by K-B with all the terms and provisions of this order, the Section 4(e) proceeding in Docket No. RI60–247 shall terminate.

(E) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by K-B, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against K-B or any other companies, person or parties affected by this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP61-120

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 4, 1964)

On October 17, 1960, as supplemented on November 14, 1960, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP61-120 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 33 miles of 10-inch supply lateral pipeline and a purchase meter station to enable Applicant to purchase and receive natural gas into its existing pipeline system, all as more fully set forth in the application, as supplemented.

The subject gas will be produced in the Normanna Area, Bee County, Texas, and sold by Mrs. J. R. Dougherty, *et al.*, (Dougherty, *et al.*) and W. A. Stockard, *et al.*, (Stockard, *et al.*).*

The subject lateral line is to extend from a point of connection with Applicant's existing 26-inch pipeline in Refugio County, Texas, to a point in the Normanna Area. The estimated cost of the proposed facilities is $1,128,000, which cost will be financed from funds on hand.

By letter, dated December 1, 1960, Applicant was granted a temporary certificate authorizing the subject project.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the described facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

*By letters dated December 1, 1960, Dougherty, *et al.*, in Docket No. CI61-619 and Stockard, *et al.*, in Docket No. CI61-751 were issued temporary certificates authorizing the subject sales of gas at total initial price of 18.0 cents per Mcf at 14.65 psia.

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the subject facilities, as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP62-144

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 4, 1964)

On April 27, 1964, as supplemented by letters of May 5 and June 19, 1964, Natural Gas Pipeline Company of America (Applicant) filed a motion to further amend the Commission's order issued June 8, 1962, 27 FPC 1126, in Docket No. CP62-144, by authorizing the construction and operation of an 880 horsepower compressor station in lieu of the 660 horsepower compressor station therein authorized, and by authorizing the injection of 6,000,000 Mcf of natural gas by December 31, 1965, instead of the presently authorized 2,800,000 Mcf by December 31, 1964, all in connection with the evaluation and testing of the underground natural gas storage reservoir in Louisa County, Iowa, known as the Cairo Storage Area.

The substitution of the 880 horsepower compressor unit for the 660 horsepower unit results from the availability of the larger unit at a total estimated cost of installation of $190,000, as compared to the estimated cost of $215,900 for the originally authorized smaller unit, a saving of approximately $26,000. Additionally, the increased horsepower will be available for expanded operations now contemplated to commence beginning with the winter of 1965-66.

The requested increase in volume of gas to be injected and the requested additional year for this operation result from the favorable indications of the testing thus far and the desirability of pursuing the development program.

Due notice of the subject motion to further amend has been given by publication in the Federal Register on August 12, 1964 (29 F.R. 11547). No petition to intervene, notice of intervention or protest to the granting of the application has been received.

The Commission finds:

It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act to further amend the certificate order issued June 8, 1962, in Docket No. CP62-144 as hereinafter ordered and conditioned.

The Commission orders:

(A) The order of the Commission issued June 8, 1962, as amended, granting a certificate of public convenience and necessity to Natural Gas Pipeline Company of America in Docket No. CP62–144 be and the same is hereby further amended by authorizing the construction and operation of an 880 horsepower compressor station at the Cairo, Iowa, Storage Area in lieu of the 660 horsepower compressor station therein authorized, and by authorizing the injection therein of 6,000,000 Mcf of natural gas by December 31, 1965, instead of the presently authorized 2,800,000 Mcf by December 31, 1964.

(B) In all other respects, said order issued June 8, 1962, as amended, in Docket No. CP62–144 shall remain in full force and effect, particularly the requirements as to monthly progress reports set forth in ordering paragraph (F) thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–284

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 4, 1964)

On May 28, 1964, as amended on June 12, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64–284 an application pursuant to Section 7 of the Natural Gas Act for authority to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain other facilities, replacing in part the facilities to be abandoned, to enable Applicant to increase deliveries of natural gas to Northern Illinois Gas Company (Northern) at Belvidere, Illinois, all as more fully set forth in the application, as amended.

Specifically, Applicant proposes to:

(1) Construct and operate approximately 3.6 miles of 24-inch pipeline partially looping Applicant's Illinois 20-inch line;

(2) Construct and operate 2.9 miles of 10 to 12-inch pipeline replacing that length of Applicant's existing 3-inch Belvidere sales lateral;

(3) Install an additional tap on the Illinois transmission line and construct a new meter and regulator station;

(4) Abandon in place approximately 0.81 miles of 3- and 4-inch lateral line, and

(5) Reclaim and retire approximately 2.3 miles of 3-inch lateral line and the existing Belvidere meter and regulator station.

Applicant states that the proposed project is required to enable it to meet the increased delivery requirements of Northern, an existing customer, for the winter of 1964–65. It appears that the Chrysler Corporation is building an industrial plant at Belvidere, Illinois, and that said plant will be a customer of Northern; thus, Northern will require an increase of peak-day deliveries at Belvidere.

Applicant states that the increased deliveries to Northern will be part of the gas Applicant has heretofore been authorized to sell and deliver to said company.

The total estimated cost of the proposed project is $447,910, including allowance for salvage of reclaimed material. Said estimated cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended, has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendment and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as amended, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as amended, in this proceeding, be and the same are hereby granted.

(E) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-312

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 4, 1964)

On June 29, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-312 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the establishment of six new delivery points for the sale and delivery of natural gas to three existing utility customers for resale, all as more fully set forth in the application.

The requested authorization covers the construction and operation of measuring and regulating stations and appurtenances for delivery of natural gas to Minnesota Valley Natural Gas Company (Minnesota Valley) at two points in Scott County and one point in Carver County, both in Minnesota; to Peoples Natural Gas Division (Peoples) at one point in Olmsted County, Minnesota, and one point in Ford County, Kansas; and to Northern States Power Company (Wisconsin) at a point in La Crosse County, Wisconsin.

No increase in the presently authorized volume of sales or contract demands to the utility companies is proposed in the instant application.

The total estimated cost of the measuring facilities to be constructed, owned and operated by Applicant is $32,880, for which the distributing utilities will reimburse Applicant.

Due notice of the subject application was published in the Federal Register on August 12, 1964 (29 F.R. 11549). No petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used for the transportation and sale of natural gas in interstate commerce for resale subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Northern Natural Gas Company authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within three months from the date on which this order issues.

(D) Applicant shall make the necessary changes in its related service agreements to reflect the new delivery points.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

REVENUE DATA ON WHOLESALE SALES OF "FIRM POWER" BY ELECTRIC UTILITIES—AMENDMENT OF ANNUAL REPORT FORM NO. 1, DOCKET NO. R-266

ORDER NO. 286

AMENDING ANNUAL REPORT FPC FORM NO. 1

(Issued September 4, 1964)*

By letter dated February 13, 1964, the Commission transmitted to all Class A and Class B privately owned electric utilities and licensees copies of the annual report FPC Form No. 1 for use in the preparation of the report they are required to make for the year 1963.

In its letter of transmittal the Commission advised the respondent companies that it has under consideration amending for 1964 and subsequent reporting years the schedule "Sales for Resale" on page 412 of Form No. 1 by subdividing the firm power statistical classification referred to in Instruction 2 at the head of the schedule into three categories, *viz.*, partial-requirements customers that take power and energy to supplement their own generation or other purchases, total requirements customers who receive credit for having available standby, and all other total-requirements customers. The letter then requested the companies' cooperation in supplying such data for 1963 in their 1963 reports.

*Published in the Federal Register on September 15, 1964 (29 F.R. 12916).

A breakdown of the "firm power" sales presently reported in the schedule is desirable to provide additional information regarding conditions of firm power service as an aid in the analysis of the charges reported for such service.

The Commission finds:

(1) In view of the foregoing, compliance with the notice, public procedure and effective date provisions of section 4 of the Administrative Procedure Act are unnecessary.

(2) Adoption of this amendment to annual report FPC Form No. 1 is necessary and appropriate for the administration of the Federal Power Act.

The Commission, acting pursuant to authority granted by the Federal Power Act, as amended, particularly sections 304, 309 and 311 thereof (49 Stat. 855, 858, 859; 16 U.S.C. 825c, 825h, 825j), *orders:*

(A) The form of annual report, FPC Form No. 1, prescribed for Classes A and B electric utilities, licensees and others by § 141.1, Subchapter D, Approved Forms, Federal Power Act, Chapter I of Title 18 of the Code of Federal Regulations, is amended by deleting the second sentence of Instruction 2, in the heading to the schedule Sales for Resale (Account 447) on page 412 of the report, and inserting in lieu thereof the following:

> For each sale designate statistical classification in column (b), thus: firm power, partial requirements customers that take power and energy to supplement their own generation or other purchases, FP(P); firm power, total requirements customers who receive credit for having available standby, FP(C); firm power, all other total requirements customers, FP; dump or surplus power, DP; other, O. Place an "x" in column (c) if sale involves export across a state line.

[Secs. 304, 309, 311, 49 Stat. 855, 858, 859; 16 U.S.C. 825c, 825h, 825j.]

(B) The amendment shall be effective for the reporting year 1964 and thereafter.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

SUN OIL COMPANY, DOCKET NO. G-8288, ET AL.; SUN OIL COMPANY, DOCKET NO. CI60-75

ORDER EXTENDING TIME FOR MAKING REFUNDS

(Issued September 4, 1964)

By order issued July 13, 1964, 32 FPC 110, in Docket No. CI60-75, the Commission, acting upon Sun Oil Company's (Sun) request to amend its certificate application in Docket No. CI60-75 to include additional acreage, granted temporary certificate authorization to Sun for sales from such additional acreage, required that Sun refund the difference between the contract price and 20.625¢ per Mcf, collected since April 1, 1963, and required that Sun, in other respects, conform to the provisions of the settlement previously entered into by the operator of the property whose certificate previously covered Sun's sale from such additional acreage. Sun was required by Paragraph (B) of this order to make such refunds on or before September 11, 1964.

On August 25, 1964, Sun filed a motion requesting that the prescribed time for making refunds be extended in Docket No. CI60-75 to run concurrently

with the time specified for making refunds in its company wide settlement offer in Docket No. G–8288, *et al.*, filed with the Commission on July 31, 1964.

In its motion for an extension of time, Sun notes that its company wide settlement proposal provides for compliance with our order of July 13, 1964 and also proposes to settle the matters involving the original acreage dedicated under the application in Docket No. CI60–75. Sun therefore requests that it be allowed to make all refunds at the same time.

Since Sun's company wide settlement proposal is presently before the Commission for consideration we shall extend the time for complying with Paragraph (B) of the order of July 13, 1964, until further order of the Commission.

The Commission orders:

The time prescribed for making refunds in ordering Paragraph (B) of the Commission's order amending temporary certificate, conditionally accepting rate filing and ordering refunds issued July 13, 1964, in Docket No. CI60–75 is hereby extended until further order of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

UNITED FUEL GAS COMPANY, DOCKET NO. CP64–267

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 4, 1964)

On April 30, 1964, United Fuel Gas Company (Applicant) filed in Docket No. CP64–267 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of measuring and regulating facilities to provide a delivery point to the Atlantic Seaboard Corporation, at its Lost River Compressor Station located in the Lost River District, Hardy County, West Virginia, all as more fully described in the application above mentioned.

Applicant states that the proposed facilities will be used to deliver 20,800 Mcf of natural gas per day for a 180 day period commencing November 1, 1964, and yearly thereafter for a like period, from a newly developed field on the Whip Cove Anticline, Hardy County, West Virginia. The delivered volumes will be substituted for volumes currently being delivered to Atlantic at points in Kanawha County, West Virginia, thus eliminating 157 miles of additional transportation by Atlantic. There will be no increase in Applicant's contract demand to Atlantic.

The estimated cost of the proposed facilities is $22,000 which will be financed from current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) United Fuel Gas Company, a West Virginia corporation, having its principal place of business at Charleston, West Virginia, is a "natural-gas company"

within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593 (4 FPC 44).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12-months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CIMARRON TRANSPORTATION COMPANY, DOCKET NO. CP64–280

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 8, 1964)

On May 22, 1964, as amended on June 24, 1964, Cimarron Transmission Company (Applicant) filed in Docket No. CP64–280 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition and operation by Applicant of certain facilities located in Love County, Oklahoma, from the California Oil Company and other natural gas producers, hereinafter referred to collectively as (California), and for authorization to make and install certain improvements upon the facilities to be acquired to enable Applicant to increase its sales of natural gas to Natural Gas Pipeline Company of America.

The facilities to be acquired by Applicant consist of numerous pipelines located in the Southwest Marietta Basal Oil Creek Sand unit in Love County, Oklahoma, which pipelines connect wells with a processing plant which is owned and operated by California.

The purchase price of the facilities to be acquired by Applicant is estimated to be $520,000, including the cost of improvements to be made during the first three years after the acquisition. This amount is based upon the original cost less depreciation plus the cost of the improvements which is estimated to be $87,500. The acquisition and construction are to be financed from a bank loan of $375,000 on a 15-year 6% basis, together with $125,000 to be obtained from the sale of preferred stock to Applicant's present stockholders.

Applicant states that the purpose of the acquisition is to enable it to increase its maximum daily delivery obligation to Natural from 40,000 to 55,000 Mcf per day.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cimarron Transmission Company, an Oklahoma corporation, having its principal place of business in Tulsa, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 17, 1959, in Docket No. G–17014 (22 FPC 1059).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the related sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The acquisition, construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to acquire, construct and operate facilities and to sell natural gas to Natural Gas Pipeline Company of America as hereinbefore described, all as more fully set forth in the application and amendment in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The acquisition and construction hereby authorized shall be completed and operation of the facilities shall be begun by Applicant, as provided in paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 years from the date on which this order issues.

(D) The related rate filing of the Applicant of May 18, 1964 (Supplement 23 to FPC Gas Rate Schedule No. 1) is hereby accepted for filing, subject to the applicable rules and regulations of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-257

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 8, 1964)

On April 29, 1964, as supplemented on June 15, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP64-257 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a line tap and metering and regulating station to be located in Aiken County, South Carolina, all as more particularly described in the application above mentioned.

Such facilities are to be used to deliver 350 Mcf of natural gas per day to the South Carolina Natural Gas Company for resale and distribution in the community of Beech Island, South Carolina, and its environs.

Applicant is now selling natural gas to the South Carolina Natural Gas Company for resale at Aiken under a contract demand of 66,500 Mcf. It is now proposed to reduce that volume at Aiken by 350 Mcf and to make delivery of 350 Mcf at the new proposed Beech Island delivery point on Applicant's Plant Urquhart Branch Line.

The estimated cost of the Applicant's proposed facilities is $12,630. Applicant will be reimbursed by South Carolina Natural Gas Company for the cost of the facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 3, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Southern Natural Gas Company is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12-months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

UNITED CITIES GAS COMPANY (SUCCESSOR TO V-M PIPELINE COMPANY), DOCKET NOS. CP65-27 AND G-1776

DECLARATION OF EXEMPTION AND FINDINGS AND ORDER TERMINATING CERTIFICATE AUTHORIZATION AND CANCELLING FPC GAS TARIFF

(Issued September 8, 1964)

On July 29, 1964, United Cities Gas Company (Applicant) filed an application for exemption from the provisions of the Natural Gas Act, as amended, pursuant to Section 1(c) thereof.

The application shows that Applicant acquired by merger in October 1963, two pipeline properties formerly owned and operated by V-M Pipeline Company (V-M). These pipelines, authorized by order of the Commission issued October 24, 1951, 10 FPC 1464, in Docket No. G-1776, are located wholly within the State of Illinois and provide natural gas service to the communities of Vandalia and Metropolis in that State.

The Commission finds:

(1) Applicant, United Cities Gas Company, is an Illinois corporation duly authorized to transport and distribute natural gas in said State.

(2) Applicant receives natural gas from Natural Gas Pipeline Company of America and Trunkline Gas Company within the State of Illinois, all of which gas is transmitted, sold and consumed within said State.

(3) The Illinois Commerce Commission has certified to the Federal Power Commission that it has and is exercising regulatory jurisdiction over the rates, service and facilities of Applicant.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificate authorization heretofore issued to Applicant's predecessor, V–M Pipeline Company, in Docket No. G–1776 be terminated and that the related V–M Pipeline Company FPC Gas Tariff, Original Volume No. 1 be cancelled.

Wherefore, The Commission declares, by reason of the foregoing:

United Cities Gas Company is exempt from the provisions of the Natural Gas Act and the orders, rules and regulations of the Commission thereunder.

The Commission orders:

(A) The certificate authorization heretofore granted to V–M Pipeline Company by order issued October 24, 1951, in Docket No. G–1776 be and the same is hereby terminated.

(B) The related V–M Pipeline Company FPC Gas Tariff, Original Volume No. 1 be and the same is hereby cancelled.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. RP64–9

ORDER GRANTING MOTION FOR SEPARATE PROCEEDING ON ISSUE OF ALLOWANCE FOR GAS PURCHASED FROM AFFILIATED SUPPLIERS AND PRESCRIBING PROCEDURE

(Issued September 9, 1964)

By order issued herein on July 10, 1964, 32 FPC 92, the Commission directed Cities Service Gas Company (Gas Company) to serve its cost evidence on or before September 8, 1964, pertaining to the amounts to be allowed in Gas Company's cost of service for gas purchased from its affiliated suppliers. In that order, the Commission stated that it "would be willing to consider a motion to try this issue apart from this proceeding and tentatively reflect the gas purchases from affiliates at the filed rates, provided Gas Company will stipulate that such reduced rates as may be determined for its affiliates in the separate proceeding will be reflected in the cost of service in this proceeding for all gas purchased from such affiliate and refunds, if any, resulting therefrom will be made by Gas Company to its customers from the date the proposed rates in this proceeding became effective subject to refund, *i.e.*, April 23, 1964."

On July 27, 1964, Gas Company filed a motion requesting the Commission to establish a separate proceeding for the determination of the amount to be included in its cost of service for gas purchased from its affiliated suppliers. Included within its motion was a stipulation in conformity with our order of July 10, 1964.

On August 6, 1964, the Municipal Interveners[1] filed an answer and objection to the motion. In that answer, the Municipal Interveners note that they have an application for subpoena pending before the Presiding Examiner.[2] Further,

[1] Comprising the Municipal Group For Opposing Increase in Natural Gas Rates, the City of Springfield, Missouri, and the Board of Public Utilities of the City of Springfield, Missouri.

[2] On August 20, 1964, the Presiding Examiner denied the application for subpoena.

that Gas Company has indicated in response to that application that issuance of the subpoena would require extension of time both for service of rebuttal and for response to the subpoena. The Interveners therefore urge that "establishing a separate proceeding as requested by the Gas Company is not likely to result in a significantly earlier determination of the other issues and might unnecessarily defer determination of the separated issue."

It would appear that the Interveners may have misconstrued our intent under a separate procedure on the affiliated purchase gas cost issue. While we deem it advisable to provide some flexibility in the two phases of this proceeding, it is not our intent that the service of evidence and hearing on the issue covered by Gas Company's motion be begun after termination of trial of the other issues.

The schedule hereinafter set out provides for filing of the evidence in this second phase at such times as will enable cross-examination on the affiliated purchase gas cost issue shortly after filing of reply briefs in the first phase. Additionally, although the aforementioned issue is to be tried separate and apart from the other issues in this proceeding, the test period to be used in the trial of the affiliated supplier issue is to be the same test period that is utilized in the trial of the other issues since the costs for the affiliated gas purchases are to coincide with the proper rate determination for Gas Company's sales for the period herein involved.

The Commission orders:

(A) The motion filed by Gas Company on July 27, 1964, requesting a separate proceeding on the issue of allowance in its cost of service for gas purchased from its affiliated suppliers is hereby granted.

(B) Pending the determination of the issue stated in paragraph (A) above, the cost of gas purchased by Gas Company from its affiliated suppliers will be reflected in Gas Company's cost of service at the filed rates subject to the conditions set forth in the order issued herein on July 10, 1964, and agreed to by Gas Company in its motion filed on July 27, 1964.

(C) The procedures set forth in paragraphs (A) and (B) of our order of July 10, 1964, relating to the aforementioned issue, are hereby vacated.

(D) Gas Company, the Commission staff, and all interveners proposing to present evidence on the issue involved in paragraph (A) above shall serve their testimony and exhibits upon the Presiding Examiner and all parties as follows: Gas Company, on or before October 19, 1964; Staff on or before December 7, 1964; Interveners, on or before December 21, 1964.

(E) Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner shall commence at 10:00 a.m. (EST), on January 19, 1965, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., for the purpose of reaching such agreements as will expedite the determination of the issue stated in paragraph (A) above, including, but not limited to, stipulation of facts, narrowing and defining of issues, and establishment of dates for the service of rebuttal testimony and for the cross-examination of all testimony.

(F) The cross-examination, when commenced, shall be continuous unless the Presiding Examiner finds that extraordinary circumstances preclude such procedure.

(G) Presiding Examiner Robert Weston, or any other officer designated by the Chief Examiner for that purpose (see Delegation of Authority, 18 CFR 3.5(d)), shall prescribe other relevant procedural matters not herein provided, shall preside at the prehearing conferences and at the hearings in this matter, and shall control this proceeding until the completed record is certified to the Commission, pursuant to the Commission's Rules of Practice and Procedure.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-305

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 10, 1964)

On June 22, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP64-305 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to sell natural gas to The Gas Service Company (Gas Service) under Applicant's Gas Rate Schedules F-2, C-2 and I-2 for resale in and near Fort Crowder, Missouri, through Applicant's meter and regulatory facilities previously installed in connection with the sale of natural gas to the Corps of Engineers, Department of the Army, for use at Fort Crowder, Missouri, all as more fully set forth in the application.

Applicant has been delivering natural gas to the Corps of Engineers at Fort Crowder for various on-post facilities including housing units (U.S. Government owned), pursuant to a contract dated March 1, 1951. On termination of the contract by the Corps of Engineers on April 16, 1964, Gas Service advised the Applicant of its intention to lease or purchase the distribution facilities formerly operated by the Corps, and to continue service to Fort Crowder.

Peak day and annual requirements under this application for a three-year period commencing with the 1964-65 winter season are estimated to be: 268 Mcf and 18,490 Mcf, 280 Mcf and 19,850 Mcf and 310 Mcf and 21,200 Mcf, respectively.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The proposed sale and delivery of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act.

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Cities Service Gas Company authorizing the sale and delivery of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall file pursuant to Part 154 of the Commission's Regulations an acceptable service agreement reflecting the terms and conditions of the sale and the delivery point.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP64-286

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued September 10, 1964)

On June 2, 1964, Kansas-Nebraska Natural Gas Company, Inc., (Applicant) filed in Docket No. CP64-286 an application pursuant to Subsections (b) and (c) of Section 7 of the Natural Gas Act, for permission and approval to abandon a certain segment of its natural gas pipeline facilities consisting of approximately 10.5 miles of 6-inch pipeline lying south of Northport, Morrill County, Nebraska, and for a certificate of public convenience and necessity authorizing the construction and operation of approximately 2.2 miles of 6-inch pipeline paralleling its existing 4-inch Ovid, Colorado, lateral and to sell an additional volume of natural gas, all as more particularly described in the application above mentioned.

Applicant states that the facility to be abandoned has deteriorated until the leakage therefrom has rendered it uneconomical to operate and that the customers heretofore served with gas from it can and will be served by a 10-inch pipeline paralleling it and now owned by Applicant and operated as a part of its pipeline system. There will be no interruption or diminution of service to customers resulting from the proposed abandonment.

Applicant further states that the facility which it proposes to construct and operate near Ovid, Colorado, is for the purpose of transporting additional volumes of natural gas to its customer, The Great Western Sugar Company, to be used in a new pulp dryer plant of the sugar factory, located near Ovid, Colorado. The additional volumes of gas required to be delivered to said plant on an interruptible basis per day during the sugar factory's operation will be from 6,750 to 8,000 Mcf of gas at the rate of 25 cents per Mcf.

The estimated total cost of the proposed facility to be constructed is $26,000 and will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–259 (3 FPC 966).

(2) The proposed facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned by Applicant are subject to the jurisdiction of the Commission and the abandonment as proposed is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to install and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) Permission for and approval of the abandonment and removal of the pipeline facilities by Applicant hereinbefore described and as more fully described in the application in this proceeding, be and the same are hereby granted.

(E) This certificate issued hereby is granted on the express condition that the additional interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted

maximum delivery obligations of The Great Western Sugar Company for firm resale service to Applicant's customers.

(F) Applicant shall advise the Commission in writing the date of construction of the proposed facilities and of the date of removal of the abandoned facilities within ten days of such construction or removal.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP64-256

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 10, 1964)

On April 29, 1964, The Manufacturers Light & Heat Company (Applicant) filed in Docket No. CP64-256, an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain pipeline facilities and requesting the issuance of a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate (a) 5.5 miles of 12-inch pipeline as a replacement for the same length of 8-inch line in Columbiana County, Ohio, and Lawrence County, Pennsylvania, and (b) 1.8 miles of 8-inch pipeline as a replacement for the same length of 4-inch line in Jefferson County, Ohio.

Applicant further proposes to abandon 6 miles of 6 and 8-inch pipelines in Greene and Washington Counties, Pennsylvania, which will not be replaced. The pipelines to be replaced are old and deteriorated. No abandonment of service is involved as Applicant has another 8-inch line in the area with interconnected lines.

Total cost of the facilities to be constructed and operated is estimated at $336,000.00 which will be financed as part of Applicant's 1964 construction program through the issuance and sale of 25-year installment promissory notes or common stock to its parent company, The Columbia Gas System, Inc.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation and a subsidiary of The Columbia Gas System, Inc., having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G-593, *et al.* (4 FPC 821).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant, The Manufacturers Light & Heat Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(C) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, The Manufacturers Light & Heat Company, authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(D) The certificate issued by paragraph (C) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(E) The facilities authorized by paragraph (C) above shall be completed and placed in operation within 12 months from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-282

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 10, 1964)

On May 25, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-282 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities to test a new storage area (Brookville Storage Area) in Ogle County, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate (1) a side tap and connection on its exsiting Illinois lateral in Lee County, Illinois, (2) twenty miles of 8-inch pipeline from the tap in (1) above to the field, (3) five wells for injection and withdrawal, (4) ten observation wells, (5) a skid-mounted 880 Hp compressor, and auxiliary equipment. All of the foregoing will be used in the injection of up to 5,000,000 Mcf of natural gas into the Mount Simon Sand Reservoir, and in the making of injection and withdrawal tests.

The estimated cost of the proposed storage program is $2,476,700.00, which will be defrayed from Applicant's funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

(D) The certificate issued by paragraph (A) above is conditioned upon Applicant limiting the volumes of natural gas to be injected into the proposed storage area to 5,000,000 Mcf.

(E) Applicant shall submit monthly reports giving the following information on the testing program: (Volumes shall be stated in Mcf at 14.73 psia and 60 degrees fahrenheit, and pressures in pounds per square inch absolute.)

1. Volumes of gas injected or withdrawn.
2. Volume of injected gas present in the reservoir.
3. Maximum daily injection and withdrawal rates.
4. Amount of leakage from the Mount Simon formation.
5. Shut-in wellhead pressures of observation and active wells.
6. Subsea water level in each well.
7. Location and extent of the gas bubble, or bubbles, plotted on a structure map of the reservoir.
8. Brief discussion of current operations.
9. A tabulation of wells drilled, cleaned, or recompleted with subsea elevations of formations and casing settings. Copies of any core analyses, gamma ray, neutron or other electric log surveys and back pressure tests conducted during the month.
10. Any other data which may aid the Commission in evaluating the Brookville Storage area.
11. Reports shall continue to be filed monthly until the storage maximum has reached 5,000,000 Mcf. Thereafter, reports shall continue on a semi-annual basis for two years. At the end of the two-year period, the filing of reports shall be discontinued unless otherwise ordered by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP64-236

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 10, 1964)

On April 13, 1964, as amended on June 4, 1964, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP64-236 an application pursuant to Sections 7 (c) and (b) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and for permission and approval to abandon, by sale, to the Central Illinois Light Company (CILCO), certain portions of its natural gas pipeline systems.

Applicant proposed to sell and transfer to CILCO approximately 10,393 feet of its North Springfield 10-inch OD transmission line and approximately 13,928 feet of its South Springfield 10-inch OD transmission line together with 2,777 feet of its Peoria lateral all of which facilities are located in Tazewell County, Illinois, for the consideration of a sum equal to the original cost less depreciation. The facilities above described are to remain in operation and to become parts of the gas distribution system of CILCO thus obviating the necessity for CILCO to construct new facilities in the same area to serve its customers. The result of the proposal by Applicant will be to decrease the costs of operations to Applicant and to lower costs of new facilities to CILCO without interruption of service to the Cities of Springfield and Peoria, Illinois.

Applicant proposes to construct and operate two new measuring and regulating stations on its North and South Springfield laterals at points where its parts of these respective facilities will join with the segments thereof being abandoned to CILCO's acquisitions.

The total cost of the said new facilities to be constructed is estimated to be $77,100 which cost is to be financed from funds on hand.

After due notice, no petition to intervene, notice of interventions or protest to the granting of the application has been filed.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales of natural gas by Applicant by means of the proposed facilities are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned by Applicant are subject to the jurisdiction of the Commission and the abandonment as proposed is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to install and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in operation not later than six months from the date of this order, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations aforesaid.

(D) Permission for and approval of the abandonment by Applicant of the pipeline facilities hereinbefore described and as more fully described in the application, in this proceeding, be and the same are hereby granted.

(E) Applicant shall advise the Commission of the date of completion of the facilities proposed and the date of sale of the other facilities within 10 days of such completion and such sale, respectively.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-300

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 10, 1964)

On June 12, 1964, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64-300 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity, authorizing the construction and operation of approximately 14.9 miles of 26-inch pipeline in Dearborn County, Indiana, and Hamilton County, Ohio, and approximately 8.46 miles of 26-inch pipeline in Lafayette Parish, Louisiana, all as more fully represented in the application in this proceeding.

The 26-inch pipeline to be constructed in Louisiana will result in two complete lines in this major supply area of Texas Gas from the Atchafalaya River to Eunice, Louisiana, thereby providing better dependability of this segment of the system, together with additional capacity at Eunice, all resulting in greater assurance of continuity of service north of Eunice in the event of interruption of supply from other principal gathering lines of Texas Gas' Southern Louisiana system. The 26-inch pipeline to be constructed in Indiana and Ohio will loop a single 26-inch pipeline presently utilized to make substantial deliveries of gas, thereby providing a safety factor in this important segment of Texas Gas' system and better assuring continuity of this service.

The estimated cost of the proposed 26-inch pipelines is $2,651,400 and will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G-859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized in paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF WASHINGTON, GEORGIA, DOCKET NO. CP64-304

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 10, 1964)

On June 19, 1964, the City of Washington, Georgia, (Applicant) filed in Docket No. CP64-304 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Transcontinental Gas Pipe Line Corporation (Transco) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in Washington and the Town of Tignall, and environs all in Wilkes County, Georgia, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 45 miles of 4- and 6-inch transmission pipeline and associated facilities from Transco's transmission facilities to the communities of Tignall and Washington. Applicant will also construct and operate distribution facilities in order to render service in said communities.

The estimated third year peak day and annual natural gas requirements for Washington and Tignall are 1,643 Mcf and 187,500 Mcf, respectively.

The total estimated cost of Applicant's proposed project is $1,085,000, which cost will be financed through the sale of revenue certificates. Applicant states

that in the event there are no successful bidders, it is anticipated that the revenue certificates, in the full amount of $1,085,000, will be purchased by the Community Facilities Administration of the Housing and Home Finance Agency through the Public Facilities Loan Program.

On July 10, 1964, Transco filed an answer to the subject application stating that it had no objection to the requested order and to selling up to 1,643 Mcf of natural gas per day to Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on August 15, 1964 (29 F.R. 11732). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) Applicant, the City of Washington, Georgia, is a municipal corporation incorporated under the laws of the State of Georgia and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in said city and in the Town of Tignall.

(3) It is necessary and desirable in the public interest that Transco be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 1,643 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Transco, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Transco in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Transco serve Applicant, as proposed will not place any undue burden upon Transco nor impair its ability to render adequate service to its existing customers.

(6) Applicant should, within 90 days of the date on which this order issues, submit to this Commission proof of its ability to obtain the funds necessary for this project as proposed herein.

The Commission orders:

(A) Transcontinental Gas Pipe Line Corporation be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 1,643 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Transco shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Transco, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Transco in accordance with the Commission's Regulations under the Natural Gas Act.

(D) This order shall be of no force and effect unless within 90 days from the date of issue hereof, Applicant submits to this Commission proof of its ability to obtain the funds necessary for the project as proposed herein.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

WESTERN MASSACHUSETTS ELECTRIC COMPANY, PROJECT NO. 2334

ORDER MODIFYING ORDER ON REHEARING

(Issued September 10, 1964)

On August 13, 1964, Western Massachusetts Electric Company (Applicant) filed application for rehearing under Section 313(a) of the Federal Power Act of the Commission's order issued July 15, 1964, 32 FPC 129, in this proceeding issuing a license to Applicant for the constructed Gardners Falls Project No. 2334.

The application for rehearing questions the inclusion in the license order of certain transmission facilities as part of the project works: specifically, (1) a double circuit 13.8 kv transmission line extending from the Gardners Falls Project to the 115 kv Montague substation, and (2) the 4.8/13.8 kv substation, incorrectly described in the license order as a 2.3/13.8 kv substation.

Additional information respecting the afore-mentioned transmission facilities, which was submitted as a part of the application for rehearing, shows that such facilities are not part of Project No. 2334.

The Commission finds:

It is appropriate and in the public interest that the order issued July 15, 1964 be modified as hereinafter provided.

The Commission orders:

(A) Our order issued July 15, 1964 is hereby modified in the following respects:

PARAGRAPH I. Finding (5) of the order is modified to read as follows:

(5) The 2.3/4.8 substation and appurtenant electrical and mechanical facilities mentioned or referred to in paragraph (B) below, and which were included in the application, are parts of the project within the meaning of Section 3 (11) of the Act and should be included in the license for the project.

PARAGRAPH II. Finding (6) and Article 32 of the order are hereby eliminated from the order.

PARAGRAPH III. Item (4) of paragraph (B) (ii) of the order is hereby redescribed to read "(4) a 2.3/4.8 kv substation;"

(B) The afore-mentioned Commission order issued July 15, 1964, as modified by this order, shall be accepted for the licensee and returned to the Commission within 60 days from the date of issuance of this order, and the order issued July 15, 1964 shall not become effective without acceptance of the provisions of that order as modified by the provisions of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL MAINE POWER COMPANY, PROJECT NO. 2335

ORDER DENYING APPLICATION FOR REHEARING

(Issued September 11, 1964)

On August 21, 1964, Central Maine Power Company (Applicant) filed application under Section 313(a) of the Federal Power Act for rehearing of the

Commission's license order issued July 24, 1964, 32 FPC 334, with respect to Applicant's constructed hydroelectric Project No. 2335, known as the Williams Project located on the Kennebec River in Somerset County, Maine.

The Commission's order of July 24, 1964 in Project No. 2335 would issue a license for a period of 50 years, effective as of January 1, 1938 and terminating December 31, 1987. Applicant requests that the effective date of the license be made July 24, 1964, or, at the earliest May 1, 1954.* In support of its request for a change in the effective date of the license, Applicant states:

> 1. The Williams site was first used for hydro-power more than one hundred years ago, pursuant to the Mill Act of the State of Maine. Construction of the new development in 1937–1939 was but a new step in the use of this site. Had the previous development remained in use, a license issued today would be effective no earlier than 1954. Merely because of the reconstruction, a date sixteen years earlier has been chosen.

Applicant acquired the Williams site in 1937, and thereafter in 1937 Applicant commenced construction of the existing Williams Project. It is true, as Applicant suggests, that had the previous development remained in use the effective date of the license would have been no earlier than May 1954. But such was not the case. The commencement of construction of the new project in the latter part of 1937, without having obtained a license therefor or a determination on a declaration of intention that a license was not required for the proposed construction, was prohibited by the provisions of Section 23(b) of the Federal Power Act (16 U.S.C. 817). It is for this reason that the license for Project No. 2335 is made effective as of January 1, 1938.

Applicant states that this effective date discriminates against it "solely because the Williams Project was constructed in 1937–1939." On the contrary, an effective date later than January 1, 1938 would discriminate against all other licensees which have obtained licenses for projects constructed in violation of Section 23(b) of the Act. The Commission sees no reason in this case to depart from its consistent policy.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed by Applicant on August 21, 1964 of the Commission's order issued herein on July 24, 1964, present no facts or principles of law which were not considered by the Commission when it issued its aforesaid order, or which having now been considered warrant any change or modification of the said order.

The Commission orders:

Central Maine Power Company's application filed on August 21, 1964 for rehearing of the Commission's order issued July 24, 1964 in Project No. 2335, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP64–21

ORDER DENYING APPLICATION FOR REHEARING

(Issued September 11, 1964)

On August 17, 1964, Atlantic Seaboard Corporation (Seaboard) filed an application for rehearing of the Commission's Opinion No. 435 and accompanying

*The Commission found the Kennebec River to be navigable in May of 1954 (13 FPC 1076).

order issued herein on July 17, 1964, 32 FPC 158, granting a certificate of public convenience and necessity to East Tennessee Natural Gas Company (East Tennessee), authorizing it, among other things, to serve Roanoke Gas Company, a Seaboard customer. Seaboard contends that a certificate authorizing East Tennessee's project is not required by the public convenience and necessity unless it be conditioned to require in effect that Roanoke Gas Company shall comply with Seaboard's CDS–PR (Partial Requirements) Rate Schedule.

As stated in our opinion, Roanoke Gas Company made it clear on the record that it would purchase the minimum monthly and minimum annual volumes prescribed by the said rate schedule, or any superseding rate schedule approved by the Commission. Under these circumstances we held and here reiterate that consideration of the appropriateness of the condition requested was not necessary.

The Commission finds:

The assignments of error and grounds for rehearing set forth in Seaboard's application for rehearing present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 435 and accompanying order on July 17, 1964, or which, having now been considered, warrant any change or modification of the said opinion and order.

The Commission orders:

The application for rehearing filed by Atlantic Seaboard Corporation on August 17, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–316

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 11, 1964)

On May 5, 1964, Natural Gas Pipeline Company of America (Applicant) filed an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities for the purchase and receipt of natural gas to be produced in the Baretta, Candelaria Area, El Paistle, South May, Mifflin, West Rita, Rita, Santa Rosa and Sarita Fields in Kenedy County, Texas, all as more fully set forth in said application.

Applicant proposes to construct and operate approximately 25.7 miles of 16-inch lateral supply pipeline extending from a point in the Sarita Field in Kenedy County, Texas, to a point of connection with Applicant's existing 26-inch main transmission system in Kleberg County, Texas, a dual 10-inch meter station, side tap and other miscellaneous appurtenant facilities.

The construction and operation of the lateral supply pipeline and appurtenant meter and side-tap facilities will enable Applicant to take from the aforesaid fields natural gas which it proposes to purchase from Humble Oil & Refining Company.

The total estimated cost of construction as herein proposed is $1,029,000 and is to be financed from funds on hand.

Due notice of the subject application was published in the Federal Register on August 4, 1964 (29 F.R. 11200). No petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on September 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including

the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued to Applicant and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Natural Gas Pipeline Company of America authorizing the construction and operation of facilities to take natural gas which will be purchased from Humble Oil & Refining Company as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation by Applicant, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

ARIZONA POWER AUTHORITY, PROJECT NO. 2248; CITY OF LOS ANGELES AND ITS DEPARTMENT OF WATER AND POWER, PROJECT NO. 2272

ORDER PURSUANT TO PUBLIC LAW NO. 88-491

(Issued September 14, 1964)

On August 27, 1964, the President signed into law Public Law No. 88-491, 88th Cong., 2d Sess. (78 Stat. 607). This law provides as follows:

That no licenses or permits shall be issued under the Federal Power Act (16 U.S.C. 791a–823) nor any applications for such licenses or permits be accepted for filing for the reach of the Colorado River between Glen Canyon Dam and Lake Mead during the period ending December 31, 1966; *Provided*, That nothing herein shall change or affect for the purposes of any action which may be taken subsequent to such date the present status, equities, position, rights, or priorities of any parties to applications pending on the date of the enactment of this Act.

The Commission finds:

(1) Public Law No. 88–491 suspends the Commission's authority to issue any license or accept for filing any applications for licenses or permits for the reach of the Colorado River between Glen Canyon Dam and Lake Mead until after December 31, 1966.

(2) It is appropriate, in view of this legislation, that the Commission should suspend further consideration of the applications for licenses in Project No. 2248 and Project No. 2272 until after December 31, 1966.

The Commission orders:

(A) The proceedings in Project No. 2248 and Project No. 2272 are hereby suspended, together with any further consideration of the applications for licenses filed therein, until after December 31, 1966.

(B) No new applications for licenses or permits for the reach of the Colorado River between Glen Canyon Dam and Lake Mead shall be accepted for filing until after December 31, 1966.

OPINION NO. 441

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64–109

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DENYING MOTION FOR ORAL ARGUMENT

(Issued September 14, 1964)*

Syllabus

1. While this is a close case, Commission, weighing considerations presented, *concludes* that pipeline has made a positive showing justifying certification of facilities and deliveries of gas to power plant. P. 740.
2. Commission leaves to State Commission the responsibility of distributing benefits of fuel savings [resulting from sales of gas to Weston Generating Station for boiler fuel] between Public Service's gas and electric customers. P. 740.
3. By virtue of power plant service, pipeline's customers will receive immediate and direct benefit of rate reduction agreed to by company in recent rate proceeding. P. 740.
4. Authorization of Weston service, by providing flexibility among other things, should contribute to efficient and economic operation of Michigan Wisconsin's system. P. 740.
5. Although Commission has traditionally opposed service involving use of gas for generation of steam for electric power generation, it has authorized such service when substantially justified, as here. P. 740.

---

* Initial decision appears on p. 742.

6. In granting certificate for Weston service, Commission relies upon public interest considerations only—not on argument that pipeline might deliver gas to distributor for boiler fuel by previously certificated facilities and so avoid Commission passing on propriety of such service. P. 741.
7. Certificate conditioned to provide that service be curtailed or interrupted whenever required by pipeline for maintaining adequate underground gas storage balances and for serving firm segment of its resale customers for domestic and commercial use. P. 741.
8. Commission *issues* certificate of public convenience and necessity authorizing service to distributor for use as boiler fuel in power plant.

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company.

Glen H. Bell for Wisconsin Fuel & Light Company.

William J. Froelich and *Seymour Tabin* for Wisconsin Public Service Corporation.

Eugene O. Gehl for Wisconsin Power & Light Company.

Willard S. Stafford for Madison Gas and Electric Company.

John F. Zimmermann for Wisconsin Natural Gas Company and Wisconsin Michigan Power Company.

Richard C. Steffey for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

O'CONNOR, *Commissioner:*

In this case, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) seeks, under Section 7(e) of the Natural Gas Act (Act), a certificate of public convenience and necessity authorizing it to construct and operate a 2,700-foot, 8-inch tap line and a sales meter costing some $48,655, and to deliver some 6.8 million Mcf of natural gas (estimated 1964–65 volume) to the Weston station of the Wisconsin Public Service Corporation (Public Service) for use as boiler fuel in generating electricity. The case comes before us on exceptions filed by the Commission's Staff on June 8, 1964, to the Presiding Examiner's initial decision issued May 7, 1964, granting the certificate requested.[1] The question presented is whether Michigan Wisconsin has positively shown that the benefits to the public and other considerations supporting the proposed boiler fuel service sufficiently outweight its detriments as to justify granting the requested authorization.

Michigan Wisconsin actually installed the facilities covered by its present application in 1960, in the mistaken belief that the requisite delivery point had been authorized by the Commission opinion reported in 24 FPC 177, and rendered the service in question for about three years. In conformity with a Commission order notifying it that the facilities had not been authorized, Michigan Wisconsin ceased deliveries and filed its instant certificate application.

The Presiding Examiner would issue a certificate authorizing Michigan Wisconsin to render the proposed service, relying basically on four grounds.

First, the Examiner found that the Weston service would materially benefit the parties and the public. He found that the use of gas rather than coal at the Weston station would produce fuel savings for Public Service of some $400,000 annually, and would produce revenues for Michigan Wisconsin exceeding the cost of the service by at least some $239,000 a year and probably more, with resulting rate benefits to the consumer.

---

[1] Replies to Staff's exceptions were filed by Michigan Wisconsin and Public Service on June 26, 1964, and by the Public Service Commission of Wisconsin on June 25, 1964.

Second, he held that the detriments of the Weston service alleged by Staff do not warrant its denial. He found that it would provide a market for Michigan Wisconsin's excess gas, and that Staff's objections such as the possibility that it would jeopardize Michigan Wisconsin's ability to meet its firm service obligations are not established by the record.

Third, he held that the issuance of a certificate on the present showing of benefits is justified by Commission decisions such as *Northern Natural Gas Co.*, 29 FPC 1025, and *Transcontinental Gas Pipe Line Corp.*, 11 FPC 615, and 21 FPC 138.

And fourth, he held that if a certificate were not issued, Public Service could still obtain boiler fuel service from Michigan Wisconsin by means of delivery points we have previously authorized, although at reduced benefits because additional expensive facilities would have to be constructed.

The Commission's Staff is the only party which opposes granting Michigan Wisconsin a certificate;[2] various large distributing company customers of Michigan Wisconsin and also the Public Service Commission of Wisconsin support the certificate. Staff excepts to the Examiner's ground of decision summarized above as follows.

First, Staff contends that the benefits of the Weston service found by the Examiner are not sufficient to justify this extensive use of gas for boiler fuel, in light of certain past Commission decisions (which Staff says the Examiner ignored) stating that a positive showing must be made to justify boiler fuel sales. Also, Staff contends that Public Service's electric customers would receive all the benefit of the $400,000 fuel saving through rate reductions, but that its gas customers should also benefit from some of this saving and that, contrary to the Examiner, the distribution of this saving between gas and electric customers is the concern of this Commission and should not be left exclusively to the Wisconsin Public Service Commission. Additionally, Staff contends in its brief that Michigan Wisconsin would benefit by a mere $117,598 of additional operating income from the Weston service for the contract year 1964–5, rather than the $239,000 and more found by the Examiner.

Second, Staff contends that the detriments of the Weston service outweigh its benefits. Staff argues that the Weston service involves an inferior usage of gas for boiler fuel, whereas it should be conserved by storage or otherwise made available for superior usages. Also, Staff contends that this service is undesirable from the standpoint of sound operations. Staff argues that although this service purportedly involves the interruptible use of excess gas, in practical effect it amounts to a firm industrial service because historically Weston deliveries have been interrupted only in emergencies when Michigan Wisconsin has had insufficient storage to meet its customers' firm requirements under its demand-commodity, ACQ (Annual Contract Quantity) Rate Schedule. Moreover, Staff contends that the Weston service exhausts Public Service's entitlement of firm ACQ gas prior to the end of the contract year, with the possibility that there would be insufficient volumes of gas in storage to meet the needs of firm residential and commercial customers if the winter is severe.

Third, Staff contends that under the Commission decisions cited above, the Weston service should be denied, for the benefits claimed here are even less substantial than those claimed in the *Northern Natural* case, which we characterized as "marginal"; and that the pre-emption of storage for boiler fuel involved in this case is in essence similar to the pre-emption of pipeline capacity which we condemned in the *Transco* case in 21 FPC 138.

[2] The National Coal Association and others representing coal interests originally opposed certificating the Weston service but they have withdrawn their opposition.

Fourth, Staff contends that it is extremely improbable that Public Service would actually obtain equivalent boiler fuel service from Michigan Wisconsin by means of other delivery points since the available alternatives are economically unfavorable, have never been seriously considered, and would not in fact be undertaken. Staff contends that we should not be influenced by this kind of argument, which implies that even though we find that a requested authorization is not in the public interest, the applicant will nevertheless obtain the same result without our approval and thus circumvent the Act's requirements.

This is a close case but, weighing the considerations presented, we conclude that Michigan Wisconsin has made a positive showing which justifies certificating the facilities and deliveries of gas in question.

As to benefits, it is undisputed that Public Service will benefit by a fuel saving of some $400,000 annually resulting from the Weston service. Staff is correct that this benefit is passed on exclusively to electric customers in the form of reduced rates. We leave to the Wisconsin Public Service Commission the responsibility of distributing the benefits of this fuel saving between Public Service's gas and electric customers. Although Michigan Wisconsin will not benefit by any large additional profit from the Weston service, that service will recoup revenues exceeding costs in the range indicated above. Moreover, Michigan Wisconsin's gas customers will directly benefit from the Weston service in a manner unknown to Staff and the Examiner when the Examiner's decision was issued. As set forth in the Commission's order issued June 23, 1964, 31 FPC 1579, in Docket No. G–18419, *et al.*, Michigan Wisconsin has agreed to reduce its presently effective rates by $310,000 should we authorize the Weston service. Thus, by virtue of the Western service, Michigan Wisconsin's customers will receive the immediate and direct benefit of this rate reduction.

The record also discloses other circumstances that favor granting the Weston service. It is clear that there is on Michigan Wisconsin's system this considerable volume of gas which, if it were not used for the Weston service, might not be sold at all. Also, nearly one-third of the total estimated 1964–65 Weston deliveries would consist of ACQ gas on which the demand charge would already have been paid and it would be anomalous to deny the right to resell such gas. Further, we note that Michigan Wisconsin makes no large, direct industrial sales as do many other pipelines, and that comparatively little of the gas sold on its system is destined for boiler fuel usage for generating electricity. Also, it appears that the Weston service may help relieve take-or-pay and prepayment problems on Michigan Wisconsin's system. In sum, authorization of the Weston service, by providing flexibility and in other ways, should contribute to the efficient and economic operation of Michigan Wisconsin's system.

Second, the detriments of the Weston service urged by Staff do not, in our opinion, warrant denying it. Although we have traditionally opposed service involving the use of gas for the generation of steam for electric power generation, we have authorized such service when substantially justified, as the Weston service is. However, Staff is properly concerned with the possibility that the Weston service might exhaust Public Service's ACQ entitlement early in the heating season and thereby require the curtailment of firm service on Michigan Wisconsin's system, with the effect of preferring the Weston service over such firm service.[3] Michigan Wisconsin contends that its revised procedures for authorizing and billing overrun gas will avoid any such possibility in the future.

[3] As Staff points out, in the 1962–63 heating season, Michigan Wisconsin had to interrupt Weston deliveries to Public Service for 20 days at a time when Michigan Wisconsin had drawn down its storage to a point where it was forced to limit its customers to 70 percent of their contract entitlements.

However, in our view, the importance of preventing such an occurrence justifies attaching to Michigan Wisconsin's certificate a condition aimed at precluding this possibility, as more fully set forth in paragraph (B) (ii) and (iii) of the order hereto. In addition, further consideration will be given to this problem in the Commission's pending investigation of Michigan Wisconsin's rates in Docket No. RP65-2, *et al.*, where we shall consider the issues enumerated in our order issued August 31, 1964, 32 FPC 676, instituting that investigation, which include the same tariff questions that caused Staff concern in this proceeding.

Third, in the light of the considerations described hereinabove, and the grounds for distinguishing the *Northern Natural* and *Transco* decisions discussed by the Examiner, those cases do not require denial of the Weston service.

Finally, in granting a certificate for the Weston service, we rely only upon the above public interest considerations, and not upon the argument that the company might deliver gas to Public Service for boiler fuel by facilities previously authorized and so avoid our passing on the propriety of such service.

Oral argument is not necessary and Michigan Wisconsin's motion for the same should be denied.

The Commission further finds:

(1) Michigan Wisconsin, applicant herein, is a "natural-gas company" within the meaning of the Act, and is subject to the jurisdiction of the Commission. Likewise, applicant's facilities for the Weston service, which will be used for the transportation of natural gas in interstate commerce, are subject to the jurisdiction of the Commission, and the construction and operation thereof by applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Act.

(2) Applicant's facilities for the Weston service and the transportation and delivery of natural gas thereby, as described hereinabove and in its application, are required by the public convenience and necessity. Likewise, applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder.

(3) The public convenience and necessity require that the certificate hereby issued be made subject to the conditions hereinafter prescribed, including the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of the Commission's Regulations under the Act.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Michigan Wisconsin Pipe Line Company to construct and operate the facilities and engage in the transportation of natural gas in interstate commerce described hereinabove and in the company's application, upon the terms and conditions of this order.

(B) The following conditions shall attach to the certificate hereby issued and to the exercise of the rights thereunder:

(i) Michigan Wisconsin shall comply with paragraphs (a) and (e) of Section 157.20 of the Commission's Regulations under the Act.

(ii) The service hereby authorized shall be curtailed or interrupted whenever the existing or future capacity or supply requirements of Michigan Wisconsin for maintaining adequate underground gas storage balances and service to the firm segment of its resale customers for domestic and commercial use so require.

(iii) Michigan Wisconsin shall report to the Commission as of June 1 of each year the number of days on which service to the Weston Plant was

curtailed or interrupted during the preceding 12 months, together with the date and the estimated volume in Mcf of each such curtailment or interruption. Said report shall be filed by June 30 of each year, subject to further order of the Commission.

(C) The Presiding Examiner's initial decision issued herein on May 7, 1964, is modified as hereinabove set forth and as so modified is, to the extent consistent herewith, adopted as of the date of this opinion and order, to comprise herewith the Commission's decision in this case.

(D) Except to the extent herein granted, exceptions to the Examiner's decision are denied.

(E) Michigan Wisconsin's motion for oral argument is denied.

INITIAL DECISION
OF THE PRESIDING EXAMINER ON ISSUANCE OF CERTIFICATE

(Issued May 7, 1964)

FRIEDOURG, *Presiding Examiner:* The facilities for which Michigan Wisconsin Pipe Line Company is here seeking authorization consist of a sales meter and approximately three-quarters of a mile of eight-inch pipe from the meter to a tap on the company's pipeline, so as to provide a delivery point to Wisconsin Public Service Corporation ("Public Service"). The facilities would make gas available to Public Service's Weston station, an electric generating station where the gas would be used as boiler fuel.

The facilities are already in existence, having been built in 1960 at a cost of $48,655 and service having commenced in December of that year. In September, 1961, certain coal interests [1] petitioned the Commission for an order directing Michigan Wisconsin to show cause why it should not be required to apply under Section 7 of the Natural Gas Act for a certificate authorizing the construction. For over two more years no action was taken. On October 30, 1963, 30 FPC 1138, the Commission issued an order (in Docket No. CP62-57) directing the pipeline to show cause why it should not be required to make such an application and prohibiting the use of the facilities until further order. Deliveries to Weston stopped and have not been resumed.

The pipeline did not contest the merits of the show-cause order, but instead filed an application for authorization of the facilities, which application is the subject of the present proceeding. Several distribution companies in addition to Public Service intervened, as did the Public Service Commission of Wisconsin. The coal interests were granted intervention, but withdrew before the hearings commenced. The only opposition to the application came from the Commission staff.

The attempts to show that the proposal is or will be required by the public convenience and necessity relate to their effects on the proposed consumer, that is, Public Service, and on the proposed supplier, Michigan Wisconsin.

I. Effects On Wisconsin Public Service.

In 1960 Public Service, which is one of Michigan Wisconsin's larger customers, constructed at a cost of $116,523 two and one-half miles of pipeline from the Weston plant to connect with the facilities built by Michigan Wisconsin which are the subject of this application. The purpose was to use in a new unit in its

[1] Fuels Research Council, Inc., National Coal Association, United Mine Workers of America and Midwest Coal Producers Institute, Inc.

Weston electric generating plant some of the gas available to it from Michigan Wisconsin.[2]

Public Service has available to it other methods of using the gas it proposes to use at Weston. The alternative methods do not require a certificate from this Commission.

One of the alternatives is to use, in its Pulliam station, gas received at its Green Bay, Wisconsin, delivery point. Coal destined for Pulliam is water-borne from ports on Lake Michigan or Lake Erie, while that for Weston comes overland. The former is less expensive than the latter. Consequently, the savings available to Public Service by burning gas instead of coal at Weston are greater than by doing so at Pulliam. The savings from burning gas instead of coal at Weston are about 5.6 cents per Mcf. At Pulliam they would be about 1.63 cents per Mcf. Moreover, to install the requisite equipment at Pulliam would require the expenditure of approximately $360,000, compared with the $116,523 investment at Weston.

Another alternative would be for Public Service to build a line from Stevens Point, Wisconsin to the Weston plant. It is already receiving gas at Stevens Point, so no further authority would be needed—the delivery point is already authorized. However, to bring the gas from Stevens Point to Weston it would be necessary to install a 23-mile line, the cost of which would approximate one million dollars.

The staff of the Commission nevertheless opposes issuance of the certificate for several reasons having to do with Public Service, aside from those relating to Michigan-Wisconsin, which are discussed in the succeeding section of this decision. Indeed, staff claims that Public Service has shown more reason for the denial of the certificate than for its approval.

It urges first that Public Service's gas customers are not receiving the benefit of the economies realized at Weston, because these gas customers are paying all the demand charges on the gas used there, with the result that most of Public Service's electric rate reductions in the past year and a half are attributable to the reduced price of gas, while the much smaller reductions which have taken place in gas rates are totally unrelated to the use of gas at Weston.

The examiner makes no decision as to the validity of this claim. Staff does not contest the statement of Public Service's witness, supported by an exhibit, that the use of gas at Weston has produced savings of over $400,000 per year for Public Service. The company-wide unit cost of gas was 40.3 cents per Mcf while purchasing gas for Weston, compared to 44.3 cents when not doing so. It is not the amount of the benefit that is disputed, but the propriety of the company's handling of that benefit, *i.e.*, the distribution of the saving among its customers.

That apportionment is under the jurisdiction not of this Commission but of the Wisconsin Public Service Commission. The latter agency is keenly aware of its responsibilities in that regard, as is shown not only in its brief but in a letter dated January 13, 1964, to the Secretary of this Commission. The letter,

[2] Under Michigan Wisconsin's tariff each customer is entitled to a maximum daily quantity of gas (MDQ) and also to an annual contract quantity (ACQ) equal to 190 times the MDQ. The contract year runs from September 1 through August 31. The customer may take his full MDQ on any day from November through February, 85 percent of his MDQ during the first 15 days of March and 75 percent of his MDQ from March 16 through October 31. In addition to these daily and annual volumes, Michigan Wisconsin's rate schedule OS–1 provides for the authorization by the pipeline of overrun gas on either a daily or annual basis. That is, a customer may be authorized to exceed his contract demand on any day or his ACQ in any year.

signed by the chief counsel of the State commission, reads in pertinent part as follows:

> Although we do not plan to have representation at the hearing, we are writing so that it would not be assumed therefrom that the Public Service Commission of Wisconsin is not interested in the matters to be considered.
>
> Under the Wisconsin Statutes which are administered by the Wisconsin Commission every public utility is required to provide reasonably adequate utility service at just and reasonable rates. The instant case involves not only the availability of natural gas but has a bearing upon not only the rate for natural gas service but also affects the rates of Wisconsin Public Service Corporation for electric energy since the use of natural gas for generation of electric energy at the Weston Plant affects the cost of electric service as well as the natural gas rate.

The agency's brief, furthermore, correctly states that

> The regulation of the retail gas and electric rates and service provided by Wisconsin Public Service Corporation is a matter for the Wisconsin Commission.

It is entirely proper for the Federal Power Commission to take note of the amount of savings that a proposed project will generate for the distribution companies served by a pipeline. How these savings are distributed among the distribution companies' customers is plainly the concern of the agency having jurisdiction over the distribution companies' rates and service. This Commission has so held, *Transcontinental Gas Pipe Line Corporation*, 11 FPC 605, 611; *Midwestern Gas Transmission Company*, 21 FPC 653, 661, and the contrary interpretation would violate the whole scheme of the Natural Gas Act. The point raised by staff is not properly for this Commission at all.

Staff's next objection, as regards the effect of the proposal on Public Service, is that Public Service can sell its unused ACQ gas without having to use it as boiler fuel at Weston. Staff urges that Public Service sell any excess ACQ to interruptible customers and points to four potential customers with total estimated requirements of 8.6 MMcf annually to whom it might be sold. However, staff concedes that it would take "some time" to sell this gas to these customers, and the record is bare of any evidence as to the price at which it could be sold to them. Obviously, if Public Service were desperate to sell its excess ACQ quickly, it could cut its interruptible rate to the point where the potential customers would become actual customers. If it did this, it would necessarily lose revenue from presently existing interruptible customers. The record gives no basis for calculating the amount of any such loss. Neither does it indicate that Public Service has been remiss in its search for interruptible customers at present prices, or that contracts can be negotiated at these prices at this time. The company's witness, on whose testimony staff relies in this respect, was hopeful that sales of some of this gas could be made, but could not say when. Consequently the record provides no basis for the conclusion that the Weston connection should be denied because of likelihood that the gas could be sold elsewhere.

Staff's third objection relating to Public Service is that the use of gas at Weston during the coldest months "may present problems" in the event that all of the ACQ gas available for Weston may be used up before Michigan Wisconsin makes overrun gas available under its recently-adopted procedure. Because Public Service contracts for an MDQ sufficient to serve its estimated firm peak-day requirements, and because its ACQ is fixed thereby, as noted earlier herein, its ACQ is not exactly geared to the amount of its customers' firm annual requirements but in fact exceeds those requirements. The ACQ is used first to

cover the firm requirements of Public Service's customers and then to cover the needs of interruptible customers. The balance of the ACQ, plus overrun received from Michigan Wisconsin, would be used at Weston. It is estimated that this balance of the ACQ will amount to 2,131,500 Mcf in the 1964–5 heating season, and that 4,669,000 Mcf of overrun will be available, making a total of 6,800,500 Mcf.

The fear that difficulties may arise from possible unavailability of ACQ gas at a time of year when the pipeline has not yet authorized any overrun does not appear to have substantial basis. The record shows that the pipeline has available to it some 5.9 MMcf of firm supplies of gas which it is obligated to sell to firm customers, but which those customers may be expected not to take because their MDQ requirements cause them to contract for more gas than they can use on an annual basis. Some of this excess will be supplied to Public Service on an overrun basis. In addition, the pipeline has available to it substantial volumes of overrun gas that it can buy from its suppliers and resell as overrun.

In any event, the possibility that gas deliveries to Weston may be interrupted with the result that coal may have to be used, is not a serious objection to the grant of a certificate. Should this occur, as it did during the 1962–3 season, neither Public Service nor its customers would be any worse off than if no connection were established, and as long as it does not occur they would benefit.

Staff's final objection with respect to the effect of the proposal on Public Service relates to the use of the gas at Weston as boiler fuel. In support of its position it relies principally on the Commission's Opinion No. 388 in *Northern Natural Gas Co.*, 29 FPC 1025, on *Transcontinental Gas Pipe Line Corporation*, 11 FPC 615 and *Transcontinental Gas Pipe Line Corporation*, 21 FPC 138, affirmed *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1.

Its reliance is misplaced. In the *Northern Natural* case the benefits to the customer company were found to be insignificant. The increase in its *gross* revenues would be only $40,000, whereas in the instant case there is an undisputed *saving* of $400,000.[3] It concluded that the $40,000 increase in gross was not so substantial a benefit as to justify the sale. This conclusion can hardly govern a situation where the saving is ten times as large as the gross revenue increase was there. But of even greater interest are the fact that the Commission did grant the certificate in *Northern Natural* and its reasons for doing so. The application was for authority to deliver gas to Minneapolis Gas Co., which would resell it to Northern States Power Co. on an interruptible basis for use as boiler fuel. The Commission said (29 FPC at 1027):

> * * * Northern is requesting authority simply to establish a new delivery point to an existing customer. Were it not for the geographical situation existing here, Minneapolis could make this sale to Northern States without filing any application or even notification with this Commission. * * *

The same is true in the present case. The alternatives of using the gas at Pulliam or of building a line from Stevens Point would need no certification from this Commission. Despite staff's effort to distinguish *Northern Natural* as involving merely the question of whether the Commission should authorize the same facilities to be used for making a jurisdictional instead of a nonjurisdictional sale, the fact remains that in the instant case Public Service will obtain this gas one way or another and will use it for boiler fuel, so that the distinction is a shadowy one. The basic question here is whether the most economical method of using the gas shall be permitted or whether the company shall be relegated to more expensive procedures.

---

[3] Public Service's 1962 annual report to stockholders, which forms part of the record, shows net income of $8,054,457 for the year.

In *Transcontinental Gas Pipe Line Corporation*, 11 FPC 615-6, the Commission inserted into the examiner's order a provision requiring that the transportation and delivery which it authorized be made subject to the storage requirements of other customers of the pipeline which had a shortage of storage facilities. No customer of Michigan Wisconsin has suggested any parallel provision here. Those customers who have appeared support the proposal. At most, the *Transco* provision would become effective only in a future contingency. There was no denial of a certificate in the *Transco* case and there is no showing that any like provision would be appropriate here.

The other *Transco* case relied on by the staff, 21 FPC 138, rested on different considerations. There the proposed transportation of gas for sale as boiler-fuel would have preempted pipeline capacity "* * * which would otherwise be available to meet more urgent and widely beneficial public needs * * *", 21 FPC at p. 141, and the case further involved broad questions of regulatory policy and statutory interpretation. There is no question in the present case of any preemption of pipeline capacity. Delivery of the gas on an interruptible basis, whether at Weston, at Pulliam or through Stevens Point, would not affect Michigan Wisconsin's ability to make other sales. Nor are there present here the broad policy questions that were present in the *Transco* case.

It may furthermore be noted that staff's apparent opposition to boiler-fuel sales is inconsistent with its argument that the development of potential interruptible customers over a period of years would be preferable to issuing the requested certificate. The potential customers whom staff would prefer would also use the gas as boiler fuel.

II. Effects on Michigan Wisconsin Pipe Line.

Michigan Wisconsin has several sources for the gas proposed to be sold at Weston. First, gas is allotted to each new market on the basis of estimated third-year requirements, so that for the first two years the allotment may be expected to exceed the actual take, thus creating an excess supply on Michigan Wisconsin's line. Second, some of its customers (including Public Service) do not use their full ACQ because, as noted earlier in this decision, they must nominate an MDQ sufficient to cover their maximum daily firm requirements, which gives them an ACQ in excess of what they can sell. Third, the pipeline has had gas supply deficiencies and prepayments requiring additional deliveries to it as make-ups. Fourth, its suppliers from time to time have excess gas available above their contractual commitments to the pipeline.

During the three years when deliveries were being made to the Weston Plant (*i.e.*, before the present application was submitted) they amounted to about 6,300,000 Mcf in each year. It is probable that they will approximate 6,800,000 Mcf in the future. The first of the sources of overrun gas mentioned in the preceding paragraph—the inability of new markets to use their third-year requirements in the first and second years—accounted for 18,400,000 Mcf becoming available in the 1960-61 contract year, 12,200,000 Mcf in 1961-62 and 9,600,000 Mcf in 1962-63.

With respect to the second source of surplus gas, staff spent considerable effort to show that Michigan Wisconsin is buying firm gas so as to be able to sell overrun gas at Weston. Michigan Wisconsin contracts with its suppliers on a firm daily basis for amounts which are tied in to its customers' ACQ, which represent its firm obligations to sell. To the extent that some of its purchase commitments are available because its customers requirements are less than their ACQ, a portion of that unused ACQ becomes available to other customers as overrun without the incurrence by Michigan Wisconsin of additional demand charges from its suppliers.

As to the third source, the deficiencies in Michigan Wisconsin's takes were 11,600,000 Mcf in 1960–61, 17,200,000 Mcf in 1961–62, and 19,200,000 Mcf in 1962–63. Without the sales at Weston these amounts would have been higher. Some of these deficiencies must be paid for and if not made up in the next several years are lost. Other contracts allow a two-year make-up period after which all deficiencies must be paid for. A decline in Michigan Wisconsin's sales because of a warm winter, or because of smaller industrial business, cannot be fully covered by a cut in its purchases. It is desirable from the pipeline's viewpoint that such loads as the Weston load be available to it.

The fourth source of gas for Weston—interruptible gas from its suppliers—will also be substantial in amount. The volume in the case of Midwestern Gas Transmission Company alone may be expected to approximate 8,000,000 to 10,000,000 Mcf annually. Thus, it would appear that the supply will be more than adequate to take care of the demand from the Weston plant.

It appears also that the sales will prove profitable to Michigan Wisconsin. It is undisputed that they have been so in the past—the dispute relates only to the amount. The pipeline claims that in the three years during which the Weston project was in operation there was an excess of $1,189,912 of revenues over cost of service, which includes a negligible amount ($4,488) attributable to the Federal income taxes associated with a net return of 6½ percent on the net investment in the project. The staff would consider as part of the cost of service attributable to the project $618,754 (52 percent of $1,189,912) for Federal income taxes on the earnings produced by the project.

Even staff's calculation would show a three-year profit of $579,464 (after an adjustment of $8,286) on the pipeline's $48,655 investment. In deciding the economic feasibility of the project it makes no difference which method is accepted. The project is clearly feasible. This conclusion is reinforced by the fact that staff's estimate of taxes is high because of its use of a now out-of-date tax rate, and by the further fact that probable earnings for the 1964–65 contract year are substantially in excess of the average for the past three years of actual operations.

In judging the benefit to the public, however, the staff's method is erroneous and the company's correct. The purpose of a feasibility study is to determine the extent to which a project can pay its own way and, hopefully, help defray existing system costs. If it be assumed that the company is earning a maximum fair return on its entire rate base, any excess above a fair rate of return on the project rate base will constitute earnings which should be offset by rate reductions. To relate excess project earnings to indicated system rate reductions, it is necessary that the project tax allowance be computed in the same way as would the system tax allowance in a general rate proceeding, that is, by computing taxes on the permitted return on the rate base that produced the earnings. Only in that way can the economic benefit of the project to the public be measured.

Staff raises a more serious objection in its challenge to the pipeline's method of calculating the cost of the gas that would be used at Weston. The pipeline's forecast of a $537,358 margin of revenues over cost of service for the year 1964–65 is based on an estimated cost of $1,368,000 for gas. The estimate is arrived at by multiplying the volumes of gas to be taken from each source of supply by the commodity rate for gas from that source. This gives a total commodity charge of $65,267,000 for the 324,332,000 Mcf which the pipeline will take, or an average commodity charge of 20.12 cents per Mcf. This, applied to 6,801,000 Mcf of Weston sales, gives a total estimated cost of gas of $1,368,000 associated with sales to the Weston plant.

Staff argues that the commodity charge is not the true measure of cost. Arguing that demand charges should be taken into account, it points out that Michigan Wisconsin's average cost of gas approximates 24.5 cents per Mcf, and that use of this figure would result in a total gas cost of $1,666,000 for Weston sales instead of the $1,368,000 claimed by the company.

Even on the basis of staff's cost-of-gas figures there would be a margin of $239,358 in revenues over cost of service. The staff's method is, however, of dubious validity. To the extent that gas is made available at Weston by reason of the fact that certain customers are unable to take all of their ACQ, demand charges should not be added in to the cost of Weston sales. Demand charges have already been paid by those customers and on the gas they do not take the pipeline would have to recover only its commodity charges, not its demand charges. It seems clear that the pipeline will have an excess of revenues over costs well in excess of the $239,358 figure just mentioned. If such a return on an investment of $48,655 is marginal, as staff attempts to show, it is hard to see how such an investment could ever be justified.

FINDINGS AND CONCLUSIONS

The examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated:

(1) Michigan Wisconsin Pipe Line Company, applicant herein, is a "natural-gas company" within the meaning of the Natural Gas Act, and is subject to the jurisdiction of this Commission.

(2) The applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder.

(3) The proposed facilities and service are and will be required by the public convenience and necessity.

ORDER

WHEREFORE, IT IS ORDERED, in accordance with Section 7(e) of the Natural Gas Act that a certificate for the facilities and service herein applied for be and it hereby is granted to the applicant.

ARTHUR H. FRIBOURG,
Presiding Examiner.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CERTIFICATE OF SERVICE, DOCKET NO. R-267

ORDER NO. 287

AMENDING §§ 1.17(e), 131.1, 250.1 OF, AND ADDING § 1.51 TO, THE COMMISSION'S REGULATIONS

(Issued September 14, 1964)*

Section 1.17(e) of the Commission's Rules of Practice and Procedure requires that a certificate of service be attached to the original of each pleading, docu-

*Published in the Federal Register on September 19, 1964 (29 F.R. 13101).

ment or other paper filed with the Commission. Such certificate is to be in the form prescribed by §§ 131.1 and 250.1 of the Regulations under the Federal Power and Natural Gas Acts, respectively. It has been suggested, and the Commission agrees, that the existing form which requires the listing by name and address of all the persons certified to have been served is both uneconomical and superfluous. We are, therefore, here providing for a certificate in general terms in lieu of the one heretofore prescribed. For convenience, we are including the form in the Rules of Practice (§ 1.51) in addition to the two sections of the Regulations where it is now set out.

The Commission finds:

(1) Since the amendments adopted herein involve matters of Commission practice and procedure, the notice, hearing and effective date requirements of section 4 of the Administrative Procedure Act are not applicable.

(2) The adoption of these amendments are necessary and appropriate to carry out the provisions of the Federal Power Act and the Natural Gas Act.

The Commission, acting pursuant to authority granted by the Federal Power Act, particularly sections 308 and 309 thereof (49 Stat. 858, 16 U.S.C. 825g, 825h) and the Natural Gas Act, particularly sections 15 and 16 thereof (52 Stat. 829, 830, 15 U.S.C. 717n, 717o), *orders:*

(A) Section 131.1 of Subchapter B and section 250.1 of Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations are amended by deleting the present text and inserting in lieu thereof the following:

"§ 131.1 [§ 250.1] Certificate of service.[1]

(See § 1.17 of this chapter.)

"I hereby certify that I have this day served the foregoing document upon all parties of record in this proceeding in accordance with the requirements of § 1.17 of the Rules of Practice and Procedure.

Dated at _____ this ___ day of _____, 19___.

_____

(Signature)

Of counsel for

_____"

(B) Part 1, Subchapter A, Chapter I, Title 18 of the Code of Federal Regulations is amended as follows:

1. Section 1.17(e) is amended by inserting "§ 1.51" therein. As so amended, the paragraph will read as follows:

"(e) *Certificate of service.* There shall accompany and be attached to the original of each pleading, document, or other paper filed with the Commission, when service is required to be made by the parties, a certificate of service in the form prescribed by §§ 1.51, 131.1 and 250.1 of this chapter. All other copies filed shall be fully conformed thereto."

2. Add a new § 1.51 to read as set out in ordering clause (A) hereof.

[Secs. 308, 309, 49 Stat. 858, 16 U.S.C. 825g, 825h; secs. 15, 16, 52 Stat. 829, 830, 15 U.S.C. 717n, 717o.]

(C) The amendments herein adopted shall become effective upon the issuance of this order.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

[1] To be shown on the original when tendered for filing with the Commission of every paper as specified in § 1.17(b) of this chapter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRIBUNE OIL CORPORATION, DOCKET NO. G-17709

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDINGS

(Issued September 14, 1964)

On June 26, 1964, Tribune Oil Corporation (Tribune) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure.[1] The offer involves a proposed increased rate for sales of natural gas made to Texas Gas Transmission Corporation (Texas Gas) by Tribune. The increased rate reflected in Supplement No. 4 to Tribune's FPC Gas Rate Schedule No. 8 was suspended due to a dispute as to the proper amount of tax reimbursement contractually authorized as a part of the increased rate. In its offer of settlement, Tribune proposes to refund the disputed tax reimbursement amounts, with interest. The estimated total refund approximates $1,120, exclusive of interest. The proposed settlement is in the public interest and should be accepted.

Our action herein should not be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Tribune's rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Tribune on June 26, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Tribune on June 26, 1964, is hereby approved in accordance with the provisions of this order.

(B) Tribune shall refund to Texas Gas the difference between the rates collected under the rate schedule herein and the settlement rate for sales made from December 1, 1958, through December 31, 1961, together with interest at 6% per annum until the date of payment, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from Texas Gas.

(C) Upon notification by the Secretary of the Commission that Tribune has complied with the terms and conditions of the order, specified in its offer of settlement, the above designated proceeding shall be terminated.

(D) The acceptance by the Commission of Tribune's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Tribune's, including area rate or other similar proceedings.

---

[1] The offer of settlement was tendered by Maracaibo Oil Exploration Corporation, but pursuant to Tribune's request it was, on July 21, 1964, substituted for Maracaibo as respondent in this proceeding and accepted all of Maracaibo's refund obligations therein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN MICHIGAN POWER COMPANY AND KINGSFORD COMPANY, PROJECT NO. 2131

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST, NET CHANGE THEREIN, ACCRUED DEPRECIATION, NET CHANGE IN ACCRUED DEPRECIATION AND PRESCRIBING ACCOUNTING THEREFOR

(Issued September 14, 1964)

Wisconsin Michigan Power Company and Kinsgford Company, licensees for Project No. 2131, filed initial statements pursuant to Section 4.20 of the Commission's Regulations under the Federal Power Act, claiming an actual legitimate original project cost as of November 1, 1953, in the amount of $1,901,635.33 and accrued depreciation as of that date of $665,463.65.

A license was issued on October 23, 1953, 12 FPC 1325, for a period effective from January 1, 1938 and terminating June 30, 1974, jointly to Wisconsin Michigan Power Company (Wisconsin-Michigan) and Kingsford Chemical Company, (now Kingsford Company), for the operation and maintenance of the project. The project consists of the Kingsford Hydroelectric Plant, located on the Menominee River, in Florence County, Wisconsin, and Dickinson County, Michigan. It includes a dam, powerhouse, and appurtenant facilities. The license provides for the subsequent addition to existing project facilities of necessary transmission facilities to connect the project works to Wisconsin-Michigan's system.

The project was constructed by the Ford Motor Company and its subsidiary, Ford Hydro-Electric Company, and was placed in operation in 1924. In December, 1951, the plant and the capital stock of Ford Hydro-Electric Company were sold, along with other property of Ford Motor Company to the Kingsford Chemical Company. In Docket No. E-6491, *Wisconsin Michigan Power Company* 12 FPC 1318 (1953) Wisconsin Michigan Power Company was authorized pursuant to Section 203 of the Federal Power Act to acquire the project from Kingsford Company through a purchase agreement dated February 26, 1953 which provided for a total payment of $1,522,000, consisting of an initial amount and a series of annual payments based upon an agreed amount per kwh of annual output of the plant (with a minimum annual guarantee) for a period of 12 years from March 1, 1953. Of the total payment, $1,253,280 was regarded as principal and the balance was regarded as interest. The license, issued simultaneously with the above order in Docket No. E-6491, provided for a subsequent application for transfer to Wisconsin-Michigan of all interests in the license granted upon due performance of all the terms and conditions of the purchase agreement by that Company and the Kingsford Company.

Wisconsin Michigan's application for acquisition of the hydro-electric facilities, proposed that any excess of original cost of the facilities to be acquired over the principal consideration of $1,253,280 to be paid be credited to a reserve for depreciation. The claimed provision for accrued depreciation as of November 1, 1953, includes $651,305.33 attributable to such excess and $14,158.32 accrued from March 1, 1953 to November 1, 1953.

The Commission staff conducted field studies of the books and records of Licensees and of the Ford Motor Company for the purpose of ascertaining the correctness of the claimed project costs and accrued depreciation as of November

1, 1953, and the project actual legitimate original cost and accrued depreciation as of January 1, 1938, the effective date of the license.

Following those studies tentative agreement, subject to Commission approval, was reached between the staff and Licensees' representatives with respect to certain proposed adjustments in the amounts as of November 1, 1953, indicated below:

	Claimed	Staff adjustments	Adjusted
Project cost	$1,901,635.33	$30,907.96	$1,932,543.29
Cost of nonproject property acquired	2,950.00	11,093.95	14,043.95
Total property acquired	1,904,585.33	42,001.91	1,946,587.24
Purchase cost	1,253,280.00		1,253,280.00

ACCRUED DEPRECIATION

	Claimed	Staff adjustments	Adjusted
Excess property acquired over purchase cost	$651,305.33	$42,001.91	$693,307.24
Accrued from 3/1/53–11/1/53	14,158.32		14,158.32
Accrued depreciation	665,463.65	42,001.91	707,465.56

These adjustments, and the resulting costs and depreciation as of November 1, 1953, concurred in by Wisconsin-Michigan by letter of July 14, 1961, Kingsford Company by letter of November 6, 1961, the Michigan Public Service Commission by letter of July 13, 1964, and the Wisconsin Public Service Commission by letter of July 1, 1964, are detailed in the attached Schedules 1, 2 and 3 and the accounting disposition of the adjustments as of November 1, 1953, with correcting journal entries are shown in attached Schedule 4.

The Commission finds:

(1) Licensees by their acceptance of the proposed adjustments, including the accounting dispositions and resulting respective project costs, project reserves for depreciation and project net investments, and the Michigan and Wisconsin Public Service Commissions, by their concurrence in the staff recommendations herein, have obviated the necessity for the notice and opportunity to protest, provided by Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act and therefore should be approved and directed as hereinafter provided.

(3) The actual legitimate original project cost as of November 1, 1953 is $1,932,543.29 and accrued depreciation as of that date is $707,465.56, classified by primary plant accounts as shown in Schedule 1.

(4) The actual legitimate original project cost as of January 1, 1938, the effective date of the license, is $1,932,428.16 classified by primary plant accounts and accrued provision for depreciation as of that date is $272,653.15 as shown in Schedule 1.

(5) The net increase or change in project cost for the period January 1, 1938 to November 1, 1953 is $115.13 and the net increase or change in accrued provision for depreciation is $434,812.41.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purpose of this order.

(B) The adjustments and accounting dispositions proposed by the staff and agreed to by the Licensees are hereby approved and directed to be made by Licensees.

(C) Licensee Wisconsin-Michigan to the extent that it has not already done so shall establish and maintain control and detailed project plant accounts, for Project No. 2131 showing (1) the initial debit balance as of January 1, 1938 of $1,932,428.16 as the actual legitimate original project cost; (2) the credit balance as of that date in accrued provision for depreciation of $272,653.15; (3) the net increase or change in project cost for the period January 1, 1938 to November 1, 1953 in the net debit amount of $115.13 and the increase or change in accrued provision for depreciation for that period in the credit amount of $434,812.41; and (4) the actual legitimate original project cost as of November 1, 1953 in the debit amount of $1,932,543.29 and accrued depreciation as of that date in the credit amount of $707,465.56 all as shown more specifically in the attached Schedule 1.

(D) Licensee Wisconsin-Michigan shall, within 90 days from the issuance of Commission's order, file with the Commission three certified copies of Licensee's FPC Form No. 7 and adjusting journal entries showing compliance with this order.

SCHEDULE 1

Actual legitimate original cost and accrued depreciation as of January 1, 1938, net additions to November 1, 1953, and balance as of November 1, 1953

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR64-1, ET AL.; BRIGHT & SCHIFF, DOCKET NOS. RI64-180 AND RI64-344

ORDER DENYING MOTIONS FOR CLARIFICATION AND TO SET ASIDE ORDER OF JULY 17, 1964

(Issued September 15, 1964)

There is presently before us for consideration motions filed on August 6, 1964, by Bright & Schiff, *et al.*, to clarify and to set aside the Commission's "Order Updating The Appendices To The Order Instituting Area Rate Proceedings," (32 FPC 141), issued July 17, 1964. That order added and deleted respondents and Section 4(e) rate proceedings to the consolidated Hugoton-Anadarko area rate proceeding and thereby supplemented our earlier order of November 27, 1963, which instituted the proceeding (30 FPC 1354).

Bright & Schiff seek to have their rate proceedings severed from the area rate proceeding and heard separately; their motions raise two reasons for setting aside the July 17 order:

(1) Docket Nos. RI64-180 and RI64-344 were consolidated with Docket No. AR64-1 without first affording Bright & Schiff notice of our order to consolidate and an opportunity to be heard concerning the consolidation, and

(2) Movants are opposed to consolidation because they "will be forced to serve copies of filings upon all other interested producers and interveners" and

that their cost of participation in the area rate proceedings will exceed the "small amount of rate increase requested in these dockets."[1] "Accordingly", they argue, our July 17, 1964 order, "amounts to nothing more than the taking of Bright & Schiff's property without compensation and without due process of law."

Movant's arguments will be discussed seriatim.

Commission records reveal that the increased rate filings involve natural gas sold in Texas Railroad Commission District No. 10 and that the proposed increased rates of 16.5¢ and 17.5¢ per Mcf exceed the area guideline rate of 11¢ per Mcf for increased rate promulgated by the Commission's Statement of General Policy No. 61–1. Moreover, the increased rate of 17.5¢ exceeds the guideline initial service rate of 17.0¢ per Mcf. Movants presently collect the increases (1¢ per Mcf in each docket) subject to refund and together they total approximately $770.00 annually.

Movant's first contention goes to the form and not the substance of Commission procedure. Both courts and administrative agencies normally reserve the right to consolidate proceedings presenting like matters where administrative convenience requires, without notice or hearing. Thus Section 1.20(b) of our rules provides: "The Commission *upon its own* motion[2] or upon motion by a party or staff counsel may order proceedings involving a common question of law or fact to be consolidated for hearing of any or all matters in issue in such proceeding."

Area rate proceedings were instituted because we found prior methods of producer regulations were virtually impossible to administer. The Commission, faced with the task of implementing a system of regulation to replace methods which have proven to be unworkable, now seeks to establish, by precedent, a new system in the structure of producer regulation.

Our objective has been clear from the outset—we are convinced that the area rate proceeding will result in genuine protection for the consumer and fair, expeditious regulation for the producers and processors of natural gas. The announced purpose of this area rate proceeding is to establish a just and reasonable rate or rates, under Section 5(a) of the Natural Gas Act, for all natural gas sold for resale in interstate commerce from the Hugoton-Anadarko area. Since this same "just and reasonable" statutory standard is equally applicable, as is the entire area rate concept, to *all* pending Section 4(e) rate increase proceedings, common sense and administrative feasibility compelled us to consolidate the instant proceedings for hearing and decision.

The only remaining question of importance to the Section 4(e) proceedings, once a just and reasonable area rate determination has been made, will be the amount of monies, if any, required to be refunded which were collected by the movants, and other Section 4(e) respondents subject to refund. Failure to consolidate could well create an intolerable administrative burden which, in turn, would be detrimental to the natural gas industry and the consumers it serves.

Addressing ourselves to movant's second argument relating to the merits of holding consolidated area rate proceedings we point out initially that the

---

[1] Only pleadings and evidence relating to the area rate proceeding need be served on the parties. Copies of routine reports such as the monthly or quarterly statements concerning the increase in rates required by the Regulations Under The Natural Gas Act, Section 154.102(c), need not, of course, be served on all parties. Moreover, the service list distribution by the Secretary on August 10, 1964 (which superseded the one issued March 12, 1964) contains the names of parties specifically requesting copies of pleadings made in these proceedings. Other parties need not be served.

[2] Emphasis supplied throughout this order unless otherwise noted.

Supreme Court of the United States has encouraged the Commission in proceeding in this manner. *Wisconsin v. F.P.C.*, 88 S.C. 1266 (1963). Bright & Schiff have already been designated as Section 5(a) respondents in the Hugoton-Anadarko proceeding by virtue of our November 27, 1963 order. Present consolidation of their Section 4(e) applications, therefore, is a matter that works no additional hardship on movants. In discussing the powers granted under Section 5(a) of the Natural Gas Act, the Supreme Court in *United Gas Pipe Line Co. v. Mobile Gas and Service Corp.*, 350 U.S. 332 (1956) stated at page 341:

> Section 5(a) would of its own force apply to all the rates of a natural gas company, whether long-established or newly changed, but in the latter case the power is further implemented by Section 4(e). All that Section 4(e) does, however, is to add to this basic power, in the case of a newly changed rate or contract (except "industrial" rates), the further powers (1) to preserve the status quo pending review of the new rate by suspending its operation for a limited period, and (2) thereafter to make its order retroactive, by means of the refund procedure, to the date the change became effective. The scope and purpose of the Commission's review remains the same—to determine whether the rate fixed by the natural gas company is lawful.

In short, since movants have been designated as Section 5(a) respondents in the Hugoton-Anadarko proceeding, mere severance of their Section 4(e) proceedings could not possibly accomplish any useful or valid purpose.

One fact is obvious; if we set down movant's Section 4(e) proceedings for separate hearings, their cost for preparation of requisite support for the higher rates they seek would be substantially increased as would the litigating costs of interveners and the United States Government. Indeed, the cost of separate proceedings in each Section 4(e) docket might well exceed the increased amounts in issue. Thus the consolidation effected by our July 17, 1964 order actually leads to substantial savings on behalf of the participants and the government. In addition, the area approach encourages parties to group their efforts towards building one comprehensive record which will be fully consonant with the essentially legislative character of rate regulation.

The problems confronting small independent producers (including the issue of exemption of small producers) are among the central issues in the pending Permian Basin case; the first area rate proceeding. Although the problem of perfecting realistic and workable guidelines for fixing just and reasonable rates for producers on an area basis is not susceptible to a quick or easy solution, the Permian Basin proceeding should lend itself toward establishing just and equitable standards which will enable us to render prompt determination of the major questions involved herein. Moreover, we are confident that we can perfect our procedures and expedite subsequent area proceedings as we gain experience in Permian and AR61–2.

We have given careful consideration to the arguments advanced by the movants, however, in view of the foregoing, their motions must be denied.

The Commission orders:

The motions for clarification and to set aside our order dated July 17, 1964, filed by Bright & Schiff, *et al.*, in the above-entitled area rate proceeding on August 6, 1964, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDINGS, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2, ET AL.; BRIGHT & SCHIFF, DOCKET NO. RI64-678

ORDER DENYING MOTIONS FOR CLARIFICATION AND TO SET ASIDE ORDER OF JULY 17, 1964

(Issued September 15, 1964)

On August 6, 1964, Bright & Schiff, *et al.*, filed motions to clarify and to set aside the Commission's "Order Updating The Appendices To The Order Instituting Area Rate Proceedings," (32 FPC 141), issued July 17, 1964. This order added and deleted respondents and Section 4(e) rate proceedings to the consolidated Texas Gulf Coast area rate proceeding and thereby supplemented our earlier order of November 27, 1963, which instituted the proceeding (30 FPC 1354).

The Commission orders:

The motions for clarification and to set aside the Commission's order of July 17, 1964, filed herein on August 6, 1964, are identical[1] to those filed on the same date, and denied by order issued contemporaneously herewith, in *Area Rate Proceedings, et al.* (Hugoton-Anadarko Area), Docket No. AR64-1, *et al.* Accordingly, the instant motions are denied for the same reasons set forth therein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER AMENDING LICENSE

(Issued September 15, 1964)

This order, amending Article 39 of the license for the Idaho Power Company's Project No. 1971 on the Snake River in Idaho and Oregon, makes clear that the Licensee may share in benefits from any coordination of its project with other power systems.

On October 4, 1963, the Licensee applied for amendment or clarification of Article 39, reading:

> The Licensee shall operate the project and its system in coordination with the Northwest Power Pool, and shall arrange for such transmission facilities as may be required for such operation.

The application stated that the Bonneville Power Administration interprets this language as requiring the Licensee to coordinate with other power systems without entitling the Licensee to share in the resulting benefits. According

[1] Only the rate increase docket number is different. The gas involved is sold in Texas Railroad Commission District No. 4 for 15.5¢ per Mcf which is 1¢ higher than the last effective rate. The annual amount of the increase is estimated to be $1,000.

to the Licensee, this interpretation in effect excludes it from benefits to which it would be entitled as a participant in the Northwest Power Pool. It consequently sought to modify its license to insert a new Article 39 reading as follows:

> The Licensee shall operate the project and its system in coordination with the Northwest Power Pool, so as to achieve maximum coordination benefits which shall be shared equitably by the participants in such coordination. In the event the participants cannot agree thereon, the Commission shall equitably apportion the benefits after notice and opportunity for hearing upon the Commission's own motion or upon motion of any party.

The Secretary of the Interior on March 13, 1964, filed comments and petition to intervene.[1] The Secretary's position is summarized at pages 10 and 11 of his comments and petition:

> [T]he purpose of the Company's present petition is to obtain payment for headwater benefits that it provides to United States Federal projects downstream. The Company having failed to accomplish this in direct negotiations with Bonneville Power Administration now seeks to obtain payment by becoming a party to the Pacific Northwest Coordination Agreement. Under Section 13(a) of that Agreement * * * there is a sharing of benefits so that downstream generation projects allow credit to upstream non-Federal projects for the benefits that they confer on the Federal plant. The difficulty is, however, that the Idaho Power Company license contains a unique provision. Article 39 places that Company in a different position than other licensees in the Northwest. Article 39 requires coordination without sharing of benefits by the downstream Federal plant. The United States cannot be required to pay for something which it is already entitled to receive without payment.

Article 39 of the license for Project No. 1971 is an early version of a license condition which was designed to require the licensee to coordinate if it did not achieve adequate voluntary coordination. The subsequent evolution of this article may be observed in Article 39 of the license for Project No. 2149, issued on July 12, 1962,[2] in Article 14 of the license for Project No. 2315, issued on November 21, 1963,[3] and in Article 14 of the license for Project No. 2243 issued on February 5, 1964, as modified on April 30, 1964.[4] The opinion issuing license for Project No. 2315 said with respect to the coordination article *supra*, p. 1339:

> Article 15 requires electrical and hydraulic coordination of the operation of the project with other power systems. The article contemplates that coordination will result in net benefits to be shared by all parties involved, including the licensee.

And in Opinion No. 418-A, in rejecting a similar argument by Interior, we said:

---

[1] As comments, the document was timely filed; as a petition to intervene, it was not filed within the period prescribed.

[2] *Public Utility District No. 1 of Douglas County, Washington*, 28 FPC 128, 133 (1962).

[3] *South Carolina Electric and Gas Company*, Opinion No. 411, 30 FPC 1333 (November 21, 1963). [See Form L-3, 30 FPC 1660.]

[4] *Pacific Northwest Power Co.*, Opinion No. 418-A, 31 FPC 1051 at 1054 and 1061 (April 30, 1964).

*** * * we do not believe that the Article proposed by Interior, insofar as it refuses to recognize an equitable sharing of benefits in the context of a mixed system of plants in a common basin, will result in the maximum economic benefit to the region.[5] Only by recognizing the contributions of each system in providing for an equitable sharing of benefits will the optimum development of our resources envisioned by the framers of the Water Power Act become a reality.**

[5] This is not to say, as Interior alleges, that Article 14 requires the federal government to pay for headwater benefits—a payment precluded by Section 10(f) of the Act. As we have earlier stated, Article 14 does not require 10(f) payments. *P.U.D. No. 1 of Douglas County*, Project No. 2149, 28 FPC 128.

We find nothing in the Commission's decision in issuing the license for Project No. 1971 which leads us to believe that the licensee in being required to coordinate was not to share in the benefits from coordinated operation to any extent consistent with the Federal Power Act.[6] The Commission was well aware of the fact that the various participants in the Northwest Power Pool in coordinating the operations of the several projects on the Columbia River and its tributaries did so on the basis of sharing benefits, and in inserting the Article to insure that Idaho Power would join in the coordination efforts we did not purport to require it to participate on a less favorable basis than the other members.

We find no basis for the assumption of the Secretary that "the purpose of the company's petition is to obtain payment for headwater benefits that it provides to United States Federal Projects downstream," but, in any event, adoption of a modified Article 39, consistent with the article included in the license for Project No. 2243, will not have this result. We are, of course, aware that Section 10 (f) of the Act requires the Commission to determine payments for headwater benefits provided to non-Federal projects by upstream reservoirs of the United States and that it has been established that this subsection does not authorize the Commission to assess payments against the United States for headwater benefits received from a non-Federal project.[8] Moreover, we have held that even where a coordination agreement makes provision for credit against the United States for headwater benefits our subsection 10(f) determination may ignore such credit.[7] Consistent with what we believe is the purport of Section 10(f) of the Act, we would not condition any coordination determination pursuant to the modified language of Article 39 set forth below to compensate the Licensee for headwater benefits it provides to downstream Federal projects. But this does not mean that the Licensee should not share in benefits resulting from electrical coordination or from hydroelectric coordination other than headwater benefits.

[6] *Idaho Power Company*, 14 FPC 55 (1955).

[8] *Grand River Dam Authority* v. *F.P.C.*, 246 F. 2d 453 (1957). Bills to amend the Federal Power Act to permit such payment were pending in Congress between 1954 and 1960, *i.e.*, through seven Congressional sessions, but none was enacted. See S. Rep. No. 1865, 84th Cong., 2d Sess. (1956); S. Rep. No. 1414, 86th Cong., 2d Sess. (1960); Hearings on S. 3434 Before a Subcommittee of the Senate Committee on Interstate and Foreign Commerce 83rd Cong., 2d Sess. (1954); Hearings on S. 1574 Before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs, 84th Cong., 1st Sess. (1955); Hearings on H.R. 5309, H.R. 7201, and H.R. 7494 Before a Subcommittee of the House Committee on Interstate and Foreign Commerce, 86th Cong., 2d Sess. (1959); Hearings on S. 1782, S. 2262, S. 2263, S. 2264, S. 2265, and S. 2266 Before the Senate Committee on Interstate and Foreign Commerce, 86th Cong., 1st Sess. (1959).

[7] See *Columbia River Basin Headwater Benefit Investigation*, 29 FPC 238 (1963). Through the first and second Pacific Northwest Coordination Agreements, to which Bonneville was party, took account of headwater benefits, the Commission under subsection 10(f) determined headwater benefits payments to the United States for the period covered by these agreements.

We agree with the Secretary that the Licensee's obligations to arrange for such transmission facilities as may be required for proper coordination should not be eliminated from any amended article. As in the case of our action in Opinion No. 418-A, *supra*, the amended Article we are adopting expressly refers to the Licensee's obligations to make available "the additional transmission facilities," as directed by the Commission, to eliminate any doubt as to this matter. The amended article also makes clear that the Licensee is not barred from participating in the benefits of coordination other than headwater benefits to the projects of the United States.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act that the following amendment be made in Article 39 of the license issued on August 4, 1955, 14 FPC 55, to the Idaho Power Company for Project No. 1971 on the Snake River, Idaho and Oregon.

The Commission orders:

(A) Article 39 of the license issued on August 4, 1955, for Project No. 1971 on the Snake River, Idaho and Oregon, is amended to read:

Article 39. The licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner including the construction of additional transmission facilities as the Commission may direct in the interest of maximizing power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the licensee as the Commission may order.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER DENYING REHEARING

(Issued September 15, 1964)*

Idaho Power Company, licensee for Project No. 1971 on the Snake River in Idaho and Oregon, filed an application on September 26, 1963, to amend its license to authorize two 230 kv double-circuit transmission lines, designated Nos. 3 and 4, from the Brownlee switchyard to the Boise Bench substation. On July 24, 1964, 32 FPC 342, the Commission issued an order amending the license for Project No. 1971 to authorize these transmission lines. As a condition of this authorization, the licensee was required to wheel power for use of the United States or for sale to preference customers under Federal power marketing policies on the excess capacity of all transmission lines under license for Project No. 1971 and to increase the capacity of such lines at the expense of the United States. The licensee on August 20, 1964, filed an application for rehearing.

*Affirmed, *Idaho Power Co.* v. *F.P.C.* 346 F. 2d 956 (CA9-1965); cert. denied, 382 U.S. 957 (1965).

Previously, on August 18, 1964, it had by letter requested permission immediately to begin construction on at least one of the two new transmission lines. Because of the relationship of this request to the application for rehearing, we shall deal with it in this order.

The application for rehearing requests "that Applicant be granted the opportunity to be heard by the Commission * * *". By letter of September 10, 1964, however, the licensee made clear that it was not its intention "to present additional factual evidence at this time." Since nothing in the application itself suggests that any facts are in dispute, it appears that an evidentiary hearing is not necessary or appropriate.

The licensee's primary contention in its application for rehearing is that the condition upon which the authorization for the proposed transmission lines was granted contravenes Section 6 of the Federal Power Act (16 U.S.C. 799), providing in pertinent part: "Licenses * * * may be altered * * * only upon mutual agreement between the licensee and the Commission * * *." A further contention is that the condition violates the due process and *ex post facto* clauses of the Constitution.

F.P.C. v. *Idaho Power Co.*, 344 U.S. 17 (1952), holds that the Commission is entitled to grant authorizations for hydroelectric project works subject to reasonable conditions. (See also Section 10(g) of the Act.) This authority applies equally in passing upon applications for the original issuance of a license or for an amendment thereof. See *The Montana Power Company* v. *F.P.C.*, 298 F. 2d 335, 339 (CADC, 1962), recognizing that issuance of new licenses and amendment of licenses are merely different means of granting new authorizations. The Commission cannot, of course, require the licensee to construct the new facilities if it does not wish to accept the new conditions we have prescribed in granting the authorizations therefor. The licensee's remedy to contest the reasonableness of the condition is by way of court review. Constitutional and statutory prohibitions on the Commission's unilateral alteration of licenses do not apply to the situation where the licensee seeks an amendment which the Commission grants upon condition.

F.P.C. v. *Idaho Power Company, supra*, expressly held that wheeling provisions similar to those provided herein were a reasonable condition upon the authorization granted there. Since the licensee's proposed lines and its presently licensed lines are segments of a single transmission system, the authorization of wheeling rights for the United States across all of the primary lines of the project is an appropriate condition upon the grant of the proposed licensed amendment which, in our judgment, will best serve to adapt the licensee's plans to a comprehensive plan for improving the waterway for the use or benefit of interstate or foreign commerce and for the improvement and utilization of water power development.

The question remains whether Idaho can proceed immediately to construct one or both of lines 3 or 4 herein authorized. We believe it clear that the only way in which Idaho can secure authorization for such construction is by its acceptance of the proffered licensed amendment. We do not believe, however, that in the circumstances of this case where lines 3 and 4 are presently urgently needed and would in any event be essential for comprehensive development of the previously authorized project, it would be contrary to the public interest for such acceptance to be accompanied by a reservation on the part of the licensee to object, upon timely court review of the Commission's order, to the lawfulness of the wheeling condition.

The Commission finds:

It is appropriate and in the public interest in administrating Part 1 of the Federal Power Act (16 U.S.C. 791–823), particularly Sections 3(11), 3(12), 4(e), 10(a), and 10(g) (16 U.S.C. 796, 798(e), 803(a), and 803(g)), that the Idaho Power Company's application for rehearing, filed on August 18, 1964, of the order, issued on July 24, 1964, amending the license for Project No. 1971, to authorize the Brownlee-Boise Bench Transmission Lines Nos. 3 and 4 be denied.

The Commission orders:

The aforesaid application for rehearing of the order issued on July 24, 1964, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KANSAS POWER AND LIGHT COMPANY

ORDER ACCEPTING RATE SCHEDULES FOR FILING AND TERMINATING PROCEEDING

(Issued September 15, 1964)

Kansas Power and Light Company (Kansas Power) of Topeka, Kansas, on July 31, 1964, submitted for filing, pursuant to Section 205 of the Federal Power Act and Commission Order No. 282, eight contracts providing chiefly for additions or discontinuances of delivery points for wholesale electric service to rural electric cooperatives served under Kansas Power's Schedule RC–3; twenty-eight contracts for wholesale electric service to municipalities served under Kansas Power's Schedule MWH–63 and one contract for a change in delivery point to a municipality; ten contracts providing principally for interchange, firm power, economy energy, or emergency service rendered to a municipality and a light and telephone utility under other rates; and one contract adding eight delivery points for service to the utility. The attached Appendix A sets forth in detail Kansas Power's proffered rate schedules as designated in the files of the Commission.

Schedule MWH–63, applicable to service to municipalities, in lieu of the previous Rate MWH–2 evidences the principal change which has been made in Kansas Power's rates to its wholesale customers. That rate includes a demand charge of $2.15 per kw for the first 400 kw of billing demand and $1.60/kw for excess over 400 kw, as well as an energy charge of .55¢/kwh with a fuel adjustment factor based on actual system heat rate of the most recent month. Twenty-four of the twenty-eight municipalities filing to utilize this newer rate will receive rate reductions resulting from the change from Rate MWH–2 to MWH–63. The MWH–63 rate is an initial rate filing for service to three municipalities and replaces a rate schedule on file for emergency service to the remaining municipality.

In addition, pursuant to the new filing, Kansas Power is for the first time making available to the D.S. & O. Rural Electric Cooperative Association at its Solomon delivery point service at its lower RC–3 rate, rather than the MWH–2 and MWH–63 rates it previously charged the cooperative at this point. This change which is in accord with the request made in the cooperative's previous

protest to this Commission will, it is estimated, result in annual savings of about $6,000 or 25 percent in the rates being paid by the cooperative for deliveries at Solomon.

This proceeding was initiated by the Commission's order issued May 15, 1963 (29 FPC 926) accepting certain rate schedules of Kansas Power for filing, directing the submission of cost data, and directing a staff investigation of Kansas Power's rates and charges subject to Commission jurisdiction under the Federal Power Act. Thereafter Kansas Power raised the issue of this Commission's jurisdiction over the wholesale rate schedules in question, and the Commission granted rehearing by its order issued July 16, 1963. [Unreported]

Subsequent to the Commission's order of July 16, 1963, a number of conferences were held among representatives of the Company, the Kansas State Corporation Commission (which filed a notice of intervention herein), and the Commission staff. Based upon cost data supplied by the Company and a staff cost of service study, it appears that Kansas Power's rates and charges for service to municipalities and other wholesale customers, as modified by the filings referred to herein, are not unreasonable.

Kansas Power now requests that the Commission's orders of May 15 and July 16, 1963, be vacated, and the proceedings thereunder be terminated. The Kansas State Corporation Commission, by letter dated August 4, 1964, concurred in the Company's request for termination of the proceedings under the two aforesaid orders.

The Company takes the position that this Commission does not have jurisdiction at this time over the rates for wholesale sales covered by rate schedules accepted for filing by the Commission by its order issued May 15, 1963, or the rate schedule filings considered herein, and has made these filings subject to a reservation of the jurisdictional issue. However, Kansas Power concedes that the Commission will have jurisdiction over most of its wholesale power sales when certain interchange agreements, to which it is a party and which are now on file with this Commission, become operative on June 1, 1965. Under these circumstances we see no point in pursuing the jurisdictional issue at this time.

The Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act that the rate schedules as identified and designated in the attached Appendix A be accepted for filing.

(2) It is necessary and appropriate for purposes of the Federal Power Act that this proceeding be terminated as hereinafter ordered.

The Commission orders:

(A) The rate schedules identified and designated in the attached Appendix A are hereby accepted for filing, to become effective on August 31, 1964.

(B) The above-entitled proceeding initiated by order of the Commission issued May 15, 1963, is hereby terminated.

(C) Nothing contained in this order shall be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract or practice affecting such service or rate, provided for in the above rate schedules; and this order is without prejudice to any findings or orders which have been or hereafter may be made by the Commission in any proceeding by or against Kansas Power.

APPENDIX A

THE KANSAS POWER AND LIGHT COMPANY

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7176

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 15, 1964)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Washington, Wyoming, California, Montana and Idaho, with its principal business office at Portland, Oregon, filed an application on August 14, 1964, for authorization pursuant to Section 204 of the Federal Power Act to issue and sell at competitive bidding, $30,000,000 principal amount of First Mortgage Bonds, —%, series, due 1994.

Applicant proposes to issue the Bonds under its Indenture of Mortgage and Deed of Trust, dated as of July 1, 1947, to Guaranty Trust Company of New York (now Morgan Trust Company of New York) and Oliver R. Brooks (Wesley L. Baker, successor) as Trustees, as heretofore supplemented and as to be further supplemented by a proposed Seventeenth Supplemental Indenture to be dated as of October 1, 1964.

Applicant further proposes on or about September 17, 1964, to invite sealed, written bids for the purchase of the proposed Bonds by newspaper publication

and distribution of a Form of Bid, together with a statement of the terms and conditions relating thereto and a recital of the terms of purchase.

Each bid, whether made by a single bidder or a group of bidders, must be for the purchase of all the Bonds and must be in writing on the Form of Bid provided by the Applicant and each counterpart must be signed by the bidder, or by the representative in the case of a group of bidders. Each bid must specify: (1) the coupon rate to be borne by the Bonds which rate shall be a multiple of ⅛ of 1%; (2) the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be expressed as a percentage of the principal amount of the Bonds and shall not be less than 98½% nor more than 102¾% thereof; and (3) that Applicant shall be paid the amount of accrued interest on the Bonds from October 1, 1964, to the date of payment therefor and delivery thereof. Each bid must be accompanied by a certified or official bank check or checks in the aggregate amount of $900,000.

Unless postponed, all bids for the purchase of proposed Bonds must be received by Applicant before 11:00 a.m., New York time, on September 28, 1964 at Room 2033, Two Rector Street, New York, New York. Unless Applicant rejects all bids for the proposed issuance of Bonds (which it reserves the right to do) or excludes a bid or bids for reasons specified in the statement of the terms and conditions, it will accept the bid which will provide it with the lowest annual cost of money. The net proceeds from the proposed issuance of $30,000,000 principal amount of New First Mortgage Bonds, together with funds from the Applicant's treasury will be applied to and issued for (a) the payment of all Promissory Notes which are expected to total $16,000,000 at the time of the consummation of the issuance and sale of the Bonds; (b) payment of $2,250,000 serial notes outstanding under a 1956 credit agreement; and (c) finance, in part, Applicant's 1964 and 1965 construction program.

The expenditures for Applicant's 1964 and 1965 construction program are estimated to be approximately $41,660,000 for 1964 and $44,750,000 for 1965. The principal items of expenditures for those years are described as follows: $6,400,000 for completion of the third unit at the Dave Johnston Steam Plant in 1964; $2,250,000 in 1964 and $1,000,000 in 1965 for the completion of additional transportation and mining facilities at the Dave Johnston Steam Plant; $2,200,000 toward the construction of the first unit at the Cherokee, Wyoming steam plant 24 miles west of Rawlings (total cost estimated at $33,750,000); $200,000 in 1965 toward the construction of a coal mine for the Cherokee Steam Plant (total cost estimated at $3,640,000); $100,000 in 1964 and $1,500,000 in 1965 for the completion of the 230/500 kv transmission line from Stephens Butte, California to Keno, Oregon; $1,900,000 in 1964 for completion of a 230 kv transmission line from Oregon Basin, Wyoming to Thermopolis, Wyoming (to be operated initially at 115 kv); $815,000 in 1965 for a 230 kv transmission line from Sinclair, Wyoming to Cherokee Steam Plant (also to be operated initially at 115 kv); $935,000 in 1964 for a 230 kv transmission line from Medford, Oregon to Grant's Pass, Oregon; $465,000 in 1964 and $5,650,000 in 1965 for new substations and conversions and additions to existing substations; $17,661,000 in 1964 and $19,100,000 in 1965 for additional distribution facilities; $2,217,000 in 1964 and $2,400,000 in 1965 for additions to steam heating, water and telephone utility systems; and $4,657,000 in 1964 and $4,890,000 in 1965 for other plant facilities, surveys, and investigations.

Written notice of the application has been given to the Public Utilities Commissioner of Oregon, the Wyoming Public Service Commission, the Washington Utilities and Transportation Commission, the Public Utilities Commission of

the State of California, the Public Service Commission of Montana and the Idaho Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on August 26, 1964 (29 F.R. 12151), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before September 11, 1964, with the Federal Power Commission, Washington, D.C., 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Montana Public Utilities Commission by order dated August 19, 1964, the Wyoming Public Utilities Commission by order dated August 19, 1964, the Oregon Public Utilities Commissioner by order dated August 31, 1964, the Idaho Public Utilities Commission by order dated September 2, 1964, the California Public Utilities Commission by order dated September 4, 1964, and the Washington Public Utilities Commission by order dated September 8, 1964, approved the proposed issuance and sale of Bonds in the manner and for the purposes set forth above.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, in Docket No. E-7025, 27 FPC 620.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue herein involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Bonds is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further orders, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

OPINION NO. 442

UNION CARBIDE CORPORATION, PROJECT NO. 1856

OPINION ON AN ORDER TO SHOW CAUSE WHY UNION CARBIDE SHOULD NOT APPLY FOR AND SECURE A LICENSE PURSUANT TO SECTION 4(e) OF THE FEDERAL POWER ACT

(September 15, 1964)*

Syllabus

1. By any standard the New and the Kanawha comprise a major river system; it is a system which has been improved for much of its length with Federal funds and consistently dealt with by Congress as a navigable stream of the United States. P. 772.
2. Two tests of Commission licensing jurisdiction under the Federal Power Act are whether a development is located on "navigable waters of the United States" within the meaning of Section 3(8) of the Act, and whether, even though not so located, a development's operations will affect downstream navigable capacity thereby affecting interests of interstate or foreign commerce—if either test is met, development is subject to licensing under Section 4(e) of the Act, which may be enforced under Sections 4(g) and 23(b). P. 772.
3. "Navigable waters" as defined in Section 3(8) include not only those actually used for navigation but also those suitable for navigation in their natural or improved condition. P. 773.
4. For purposes of Commission jurisdiction, a finding of navigability is not precluded by interruptions between navigable reaches by falls or rapids that compel portages and waters found navigable may include the interrupting sectors. P. 773.
5. "Navigable waters" under Section 3(8) may include other parts of streams authorized by Congress for improvement or recommended to Congress for improvement after an authorized investigation. P. 773.
6. Commission *finds* that river mileage from Hinton, West Virginia on New River to head of improved navigation on Kanawha constitutes navigable waters of United States within meaning of the Act. P. 773.
7. Presence of falls or of rapids and shoals such as are found in the Hinton-Gauley reach of New River do not preclude a finding of navigability. P. 773.
8. Evidence of lumbering and rafting alone is sufficient to satisfy log-driving test of navigability followed by Commission for over two decades with judicial approval. P. 773.
9. Record sustains and even requires a finding that even if Respondent's developments were not as a matter of law located on navigable waters,

* Initial decision appears on p. 776. Order denying rehearing and providing for stay issued November 12, 1964, 32 FPC 1298.

they should be licensed because of their effect upon interests of interstate commerce—*i.e.* their effect upon navigable capacity of Kanawha River below Glen Ferris Dam. PP. 773, 774.

10. Respondent's claim for exemption under Section 23 found groundless since only permit shown was one covering different development than exists today. P. 774.

11. In a proceeding initiated under Part I of the Federal Power Act, Commission *orders* Respondents to apply for and secure a license under Section 4 (e) of the Act.

Homer A. Holt, Albert J. Snook, John W. Drye, Jr., William J. Carter, Patrick G. Sullivan and *William T. O'Ferrell* for Union Carbide Corporation.

C. Ronald Robertson and *Howard Sommerville, Jr.* for the State of West Virginia.

John D. Lane and *R. E. Hagenlock* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

In this case, we are to decide whether two constructed hydroelectric developments owned by Union Carbide Corporation ("Carbide") are subject to our licensing jurisdiction. The two projects are the Hawks Nest and Glen Ferris Dams located respectively, on the New and Kanawha Rivers in the State of West Virginia.

In 1927 a predecessor of Carbide filed a declaration of intent under Section 23 of the Federal Water Power Act to construct Hawks Nest development. The Commission then composed of three Cabinet officers initially found that the New River was not navigable but that the interests of interstate commerce would be affected. Five years later, after the institution of the independent full-time commissioners, the Commission reversed the finding of non-navigability. When the Company nonetheless began to build without a license, suits were brought to enjoin construction, first in the District Court and later as an original action in the Supreme Court against the State of West Virginia, but because of a misapprehension of the Commission's remedies these suits were dismissed on procedural grounds.

Following the 1940 Supreme Court decision in the *New River*[1] case, a license application was again filed by another Carbide predecessor and license was actually issued containing a recital of navigability. However, the Company objected to various conditions and at length in 1950 attempted to withdraw its application and to eradicate the finding of navigability. In 1952 Carbide was ordered to show cause why it should not obtain a license for the continued operation and maintenance of Hawks Nest development. Following Carbide's answer to the show cause order a hiatus of 10 years ensued, after which in 1962 the Commission pressed the action and amended its show cause order to add the Glen Ferris development. The case is before us now following an Examiner's decision in favor of licensing jurisdiction.

The two developments involved here, Hawks Nest Dam and Glen Ferris Dam, are part of an overall project which furnishes electric power for Carbide's nearby electric furnace at Alloy.[2] Hawks Nest is located on the New River 6.8 miles above the junction of the New and Gauley Rivers where the main stream changes

[1] *United States* v. *Appalachian Electric Power Company*, 311 U.S. 377.

[2] See finding number (9) in Presiding Examiner's initial decision issued April 20, 1964, *infra*, p. 800.

its name to Kanawha River. Glen Ferris is downstream on the Kanawha at Kanawha Falls, only 1.3 miles below the junction of the New and the Gauley. (See map in Appendix A of Presiding Examiner's initial decision.)

Below Glen Ferris the Kanawha flows another 95.7 miles to the Ohio River. For 90.5 miles of this length it is developed and used for present day commercial navigation by a series of locks and dams that provide an improved 9-foot channel. Glen Ferris pool, a 2250 acre feet impoundment, extends upriver 2½ miles to the foot of Hawks Nest powerhouse, which in turn is connected with Hawks Nest Dam by a 5 mile long diversion tunnel that carries the normal stream-flow and largely dewaters the intervening stream bed.

Above Hawks Nest the New River reaches 250 miles to its source in northwest North Carolina near the Virginia border. Hawks Nest pool, a 7300 acre feet impoundment, is 3 to 4 miles long. Immediately upstream is a stretch extending almost 60 miles to Hinton, West Virginia which presents a series of pools interspersed by ledges and rapids and includes an area commonly referred to as the "gorge." From Hinton to Radford (Mile 145) and beyond, the river moves more slowly through a broader valley.

Upstream from Hawks Nest there are other developments including the Corps of Engineers Bluestone Dam at mile 65 just above Hinton, a flood control project with a 36 mile long reservoir; Appalachian Electric Power Company's Clayton Dam at mile 151.2, with a 15 mile long reservoir; and several lesser power projects. The Gauley River, a tributary of the New and the Elk River, a tributary of the Kanawha are also controlled by large Corps of Engineers impoundments.

By any standard the New and the Kanawha comprise a major river system. For most of its length the Kanawha is a heavy duty artery of water-borne commerce. Stream flows average over 12,500 cfs at Kanawha Falls (near the point where the Kanawha originates) and over 10,000 cfs at the mouth of the New, flows comparable to the Potomac River just above the District of Columbia. A century and a half ago the New and the Kanawha Rivers were viewed as a potential water route from the Atlantic seaboard to Ohio via the James River. In time the dream of an uninterrupted waterway along this route faded in the face of more efficient overland transportation but not without leaving its mark. River improvements made by the Federal government in the exercise of the commerce control and costing well over $100 million have brought to the region a 9-foot navigation channel in the Kanawha; basin-wide flow regulation to protect against floods and to augment low flows; and the acquisition of 200,000 acres of upstream watersheds in the interests of watershed protection. The net result, if not an improved waterway for the length of the river, is at least a river system which has been improved for much of its length with Federal funds and consistently dealt with by Congress as a navigable stream of the United States.

Two tests of our licensing jurisdiction under the Federal Power Act are whether a development is located on "navigable waters of the United States" within the meaning of Section 3(8) of the Act, and whether even though not located on navigable waters a development in its operation will affect downstream navigable capacity, thereby affecting the interests of interstate or foreign commerce. If either test is met the development is subject to licensing under Section 4(e) of the Act, which may be enforced under Sections 4(g) and 23(b). Both heads of jurisdiction are at issue in this case.

The Presiding Examiner found that Hawks Nest and Glen Ferris developments, individually and as parts of a unified system, should be licensed under both the "navigation" test and the "effects" test. We are in agreement with his

decision, which contains a thorough review of the facts and a well-reasoned discussion of the applicable legal principles.

The question of navigability in this case involves specifically 69 miles out of the 349-mile combined length of the New and Kanawha Rivers, consisting of 7 miles at the headwaters of the Kanawha and the adjacent 62 miles of the New. Below this Kanawha segment is the improved navigable 9-foot channel in the London pool, and above this segment of the New is the reach of river from Hinton, West Virginia to Allisonia, Virginia which was held to be navigable by the Supreme Court in the *New River* case.

"Navigable waters" as defined in Section 3(8) include not only those actually used for navigation but also those suitable for navigation in their natural or improved condition. Also, for purposes of our jurisdiction, under the statute a finding of navigability is not precluded by interruptions between navigable reaches by falls or rapids that compel portages, and the waters found to be navigable may include the interrupting sectors. Finally, navigable waters under Section 3(8) may include other parts of streams authorized by Congress for improvement or recommended to Congress for improvement after an authorized investigation.

Based on the record before us, we find that the river mileage from Hinton, West Virginia on the New River to the head of improved navigation on the Kanawha constitutes navigable waters of the United States within the meaning of the Federal Power Act. There was ample proof of actual historical navigation in interstate commerce on this reach of river, notably in the evidence of commercial log floating operations for a half century by a company which sold lumber through multi-state retail outlets, and in the evidence of navigation surveys conducted by boat by Chief Justice Marshall and others in the earlier 1800's. This, together with more recent showing of pleasure boating, ferry operation, and other present-day usage of this reach of river for navigation, is indicative that this reach is suitable for navigation. Its improvability is also apparent from the record. Of course, the presence of falls such as Kanawha Falls or of rapids and shoals such as are found in the Hinton-Gauley reach of the New River do not preclude a finding of navigability. The statutory definition of "navigable waters" so provides and it only incorporates the long-established teaching of the cases. *E.g.*, *United States* v. *Appalachian Power Co.*, 311 U.S. 377 (1940); *The Montello*, 20 Wall 430 (1874); *Montana Power Co.* v. *F.P.C.*, 185 F. 2d 491 (CADC, 1950).

The evidence here of lumbering and rafting alone is sufficient to satisfy the log-driving test of navigability we have followed for over two decades[3] with the approval of the courts. Altogether, this proceeding is indistinguishable from the Tomahawk River case where, in the words of the 7th Circuit Court of Appeals:

> * * * the evidence as shown by this record establishes a long, regular and commercially successful use of the stream for the transportation of logs and rafts, and forms a reasonable basis in law for conclusion that the Wisconsin River was and is a navigable water of the United States [*Wisconsin Public Service Corp.* v. *F.P.C.*, 147 F. 2d 743, 748 (C.A.7, 1945); cert. den. 325 U.S. 880 (1945)].

The record also sustains and indeed requires a finding that even if Carbide's developments were not as a matter of law located on navigable waters, they should be licensed because of their effect upon the interests of interstate commerce—*i.e.*, their effect upon the navigable capacity of the Kanawha River

[3] See *Public Service Co. of New Hampshire*, FPC Opinion No. 357, April 1962, 27 FPC 830.

below Glen Ferris Dam. It was shown that Hawks Nest Dam can virtually terminate the entire flow of New River for several hours. Actual changes in river elevations on the Kanawha River resulting from ordinary operation of Carbide's developments and ranging up to one and a half feet were also proven. Hawks Nest's capability of affecting navigation was also indicated in evidence concerning the grounding of a barge in or near the improved channel of the Kanawha River. The standard to be applied in these matters was stated some five years ago by Judge Learned Hand in a case involving the Clyde River, and his words are equally pertinent here:

> * * * it is apparent that the evidence was enough to prove that the petitioner's dams without change and at the will of the petitioner, are capable of "affecting" temporarily the flow of water in the [navigable part of the river] and, indeed, that they do so in the ordinary operation of the petitioner's business. *Citizens Utilities Co.* v. *F.P.C.*, 279 F. 2d 1, 3 (CA-2, 1960).

Carbide contends that it possesses a valid permit issued by the War Department in 1899 covering the Glen Ferris development which under the grandfather clause of Section 23 of the Power Act eliminates the need for an FPC license for this dam. The only permit shown, however, was one covering a different development than exists today. The dam built under the War Department permit was a wood crib structure that was later relocated and replaced by the present concrete dam at Glen Ferris. Accordingly, and for the further reasons stated in the Examiner's decision, we find Carbide's claim for exemption under Section 23 to be groundless.

Carbide's remaining contentions are fully answered in the Examiner's decision. We are adopting the Examiner's decision and proposed findings in full, so far as consistent with our opinion and order, with the exception of the last sentence in the Examiner's decision, immediately preceding his findings and conclusions. This sentence is not necessary and would require clarification if adopted.

In accordance with our order Carbide must apply for and obtain a license covering Glen Ferris and Hawks Nest. We trust that these proceedings which have so long delayed the proper application of the Federal Power Act to Carbide's development will now be brought to an orderly close.

The Commission finds:

(1) The Respondent, Union Carbide Corporation, is a corporation organized and existing under the laws of the State of New York.

(2) The Respondent, insofar as it is pertinent to this proceeding, is the successor in interest to the Union Carbide and Carbon Corporation, the Electro Metallurgical Company, the New-Kanawha Power Company, and the Willson Aluminum Company.

(3) The Respondent, owns, operates, and maintains the Glen Ferris hydroelectric development located at the Kanawha Falls on the Kanawha River in West Virginia about 95.7 miles above its mouth on the Ohio River at Point Pleasant, West Virginia.

(4) The Respondent owns, operates, and maintains the Hawks Nest hydroelectric development located on the New River, West Virginia, the powerhouse being located at about mile 1.5 and the dam at about mile 6.8, or some 98.5 and 103.8 miles, respectively, upstream from Point Pleasant.

(5) The New River rises in North Carolina and flows first in a northeasterly direction, then northwesterly through Virginia and West Virginia for approximately 250 miles until it is joined by the Gauley River at which point it changes

its name and is known as the Kanawha River; the Kanawha flows into the Ohio some 97 miles below the mouth of the New and its juncture by the Gauley.

(6) In 1899 the War Department granted a permit to the Willson Aluminum Company for the construction of a timber dam at the Kanawha Falls, but on application by its successor the Electro Metallurgical Company in 1919 to replace the wooden dam with a concrete dam, to build a new powerhouse, to install two additional generators and related facilities, the Department declined to grant a new permit, which installations constitute a part of the present Glen Ferris development now owned, operated and maintained by the Respondent.

(7) The Respondent does not have a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Federal Power Act for the operation and maintenance of its project works constituting the Glen Ferris development referred to herein in findings (3) and (6).

(8) The Respondent does not have a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Federal Power Act for the operation, and maintenance of its project works constituting the Hawks Nest development referred to herein in finding (4).

(9) The existing Glen Ferris hydroelectric development with an installed capacity of 4680 kw, and the Hawks Nest development with an installed capacity of 102,000 kw, are part of a unified system which supplies electric energy for the Respondent's metallurgical operations.

(10) Congress has exercised jurisdiction over the New and the Kanawha Rivers by appropriating millions of dollars for use in protecting the watershed of these rivers, building Federal dams for flood control, river improvement, navigation, and other purposes.

(11) The Kanawha River is a navigable river of the United States. By means of the Winfield, Marmet, and London dams constructed on the river in 1937 a minimum depth of 9 feet is provided for navigation extending from the river's mouth upstream for about 90 miles. The present-day commerce on the Kanawha amounts to more than 10,000,000 tons annually, much of which is interstate in character. The remaining 7 miles of the Kanawha (including the site of the respondent's Glen Ferris development) is unimproved for modern navigation. This reach of the river, however, was used extensively for the rafting of logs during the last century, is readily susceptible of improvement for commercial navigation and accordingly is a navigable water of the United States.

(12) The New River for some 111 miles (miles 62 to 173) and above the Hinton-Gauley reach has been held to be a navigable water of the United States in, *United States* v. *Appalachian Power Co.*, 311 U.S. 377, 410, 418 (1940). The Hinton-Gauley section of the river (miles 0 to 62), the area in which the Respondent's Hawks Nest development is located, was navigated downstream by means of bateaux by Chief Justice Marshall and his party in 1812 and by the surveyors Moore and Briggs in 1819. This section was used for many years particularly following 1865 for the boating of loose logs to mills along the river and millions of boardfeet of lumber were cut from the logs and shipped in interstate commerce. Pools in this section of the river presently are capable of sustaining pleasure craft navigation, and in addition the entire section is susceptible of improvement for commercial navigation. The New River from its mouth to Hinton is a navigable water of the United States.

(13) The maintenance and operation by the Respondent, the Union Carbide Corporation, of the Glen Ferris and Hawks Nest hydroelectric facilities referred to in findings (3) and (4) above, are capable of affecting and have affected navigation in the New and Kanawha Rivers and the interests of interstate and foreign commerce.

(14) It is appropriate and in the public interest to issue an order to conserve and fully utilize the navigation and water resources of the New-Kanawha river basin occupied by the Respondent, Union Carbide Corporation's project works referred to in findings (3) and (4) above, for the use and benefit of interstate and foreign commerce, for the improvement and utilization of water power development, and for other beneficial public uses, including recreational purposes, in accordance with Section 10(a) and other provisions of the Act.

The Commission orders:

(A) The Union Carbide Corporation shall file an application for and shall obtain a license under the Federal Power Act for the continued operation and maintenance of its projects consisting of the Glen Ferris and Hawks Nest hydroelectric developments referred to in findings (3) and (4) above.

(B) Such application shall be filed in accordance with the Commission's Regulations under the Federal Power Act within 90 days from the date of issuance of this order.

(C) The exceptions to the initial decision of the Presiding Examiner are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER OF AN ORDER TO SHOW CAUSE WHY UNION CARBIDE CORPORATION SHOULD NOT APPLY FOR AND SECURE A LICENSE PURSUANT TO SECTION 4(e) OF THE FEDERAL POWER ACT

(Issued April 20, 1964)

SHEIVER, *Presiding Examiner:* This is a proceeding on an order to show cause why the Respondent, the Union Carbide Corporation, should not apply for and secure a license from the Federal Power Commission for its two previously constructed hydroelectric projects, namely, the Glen Ferris and the Hawks Nest developments located on the Kanawha and the New Rivers, respectively, in Fayette County, West Virginia pursuant to Sections 4(e), 4(g), 23, and 308 of the Federal Power Act. 16 U.S.C. 797(e), 797(g), 816, 825(g). The Hawks Nest project was constructed between 1933 and 1936 and began full operation in 1937. The Glen Ferris project was constructed in 1898 and rebuilt in 1919.

On May 19, 1941, an application was filed with the Commission for a license to authorize the construction, operation and maintenance of a hydroelectric project on the New River near Hawks Nest, West Virginia, and by order dated May 26, 1942, the Commission authorized the issuance of a license. A license was accordingly tendered to the applicant on May 6, 1944. Thereafter, the applicant (then the Electro Metallurgical Company of Glen Ferris, West Virginia, a wholly owned subsidiary of the Union Carbide and Carbon Corporation, the predecessor of the present Respondent) protested some of the provisions of the license and petitioned to have them changed. One of the disputed provisions consisted of a recital of a finding contained in the Commission's order of May 26, 1942, that the New River on which the Hawks Nest project was located was a navigable water of the United States. After numerous exchanges of correspondence between representatives of the Commission and of the applicant, conferences, and other actions following 1944 failed to resolve the differences, the Respondent on May 18, 1950 filed a notice of withdrawal of its original application stating among its reasons that the New River where the Hawks Nest project is located did not constitute navigable waters of the United States and that the Commission therefore, was without jurisdiction.

Prior to the application made by the Electro Metallurgical Company, namely, on May 10, 1927 its predecessor in interest, the New Kanawha Power Company

of Glen Ferris, West Virginia, filed a Declaration of Intention (DI–102, West Virginia) under Section 23 of the Federal Water Power Act, (Act of June 10, 1920, Ch. 285, 41 Stat. 1063, 1075; 16 U.S.C. 817) to construct the Hawks Nest project (14th Annual Report, FPC p. 158) and the Commission found that the interests of interstate commerce would be affected by such construction. But neither the Declarant nor Electro secured a license for the Hawks Nest project. Thereafter, the Commission through the Attorney General of the United States sought to enjoin its construction but because of a misapprehension of the law applicable to the enforcement of the Commission's rights, the suits filed for this purpose were not heard on their merits, but were dismissed on jurisdictional grounds. A suit in the United States District Court for West Virginia had been dismissed on the motion of the United States and at the same time a suit was filed in the Supreme Court of United States endeavoring to invoke its original jurisdiction since the State of West Virginia had intervened in the suit in the lower court. The Supreme Court dismissed the complaint for want of original jurisdiction. *United States* v. *West Virginia*, 295 U.S. 463 (1935); 11 FPC 837, 839.

On February 26, 1952, 11 FPC 837, the Commission issued an order to show cause why the Union Carbide and Carbon Corporation should not apply for and secure a license under Section 4(e) of the Act for its Hawks Nest project effective as of July 1, 1934, 11 FPC 837, 840. The Commission's long drawn out efforts to require the licensing of the Respondent's Hawks Nest project are set forth in this order.

Since the Respondent's Glen Ferris project had never been licensed, action was taken in respect to this project by the Commission in 1962 as well as the one at Hawks Nest. Accordingly, by order of August 2, 1962, 28 FPC 271, the Commission supplemented or amended its 1952 order so as to include the Glen Ferris hydroelectric development which is located on the Kanawha River. By the 1962 order the Respondent would be accorded a full hearing which it claimed had previously been denied to it. On October 1, 1962, the Respondent filed an answer to the Commission's order of August 2, 1962 denying that the stretch of the Kanawha River where the Glen Ferris project is located, or that the New River where the Hawks Nest project is located are navigable waters of the United States. In its answer the Respondent further contended that its projects are incapable of affecting navigation or the interests of interstate commerce and that the Commission is wihout jurisdiction over its projects. Thereafter, the matter came on for hearing and testimony was taken and evidence was adduced in Washington, D.C., on September 23, October 14, 15, 16, and November 13, 14, 1963, and in Charleston, West Virginia on October 22, 23, 24, 1963.[1] An oral argument was held before the Examiner on March 3, 1964.

The New and Kanawha Rivers—Navigability of the Kanawha. The New River has its origin in the northwestern part of North Carolina and may be said to assume its character as such at the mouth of Wilson Creek near the North Carolina-Virginia line. (See Appendix A.) From this point it flows first in a northeasterly and later in a northwesterly direction for approximately 250 miles to the mouth of the Gauley River where it changes its name and becomes the Kanawha River. The Kanawha flows past Charleston and some 97 miles below its beginning at the mouth of the Gauley, it joins the Ohio River at Point Pleasant. The New and Kanawha Rivers are in effect one continuous interstate stream. The New River is joined by numerous tributaries, the largest of which are the Greenbrier and the Gauley. The Elk River is the largest tributary of

[1] By order of December 10, 1963, the State of West Virginia was permitted to intervene as of November 13, 1963, and thereafter filed briefs.

the Kanawha. In its course to the Ohio the New River passes several villages and towns including Radford, Virginia, and Hinton, West Virginia. Much of the territory traversed by the New is rugged and mountainous. The river's valley is comparatively narrow. Its low water channel is sometimes narrow being from 150 feet or more, to 1000 feet more or less. At many places in the mountains its banks are almost sheer bluffs rising from the river's edge. At flood time (and more particularly before the construction of the control dams), it often became a raging torrent. It is also a river of singular scenic beauty.

The elevation of the New River above sea level at Wilson Creek is about 2440 feet, at its mouth at the Gauley 652, and the elevation of the Kanawha where it empties into the Ohio is about 514 feet. The fall in the New River from Wilson Creek to its mouth, in a distance of 252 river miles is about 7 feet per mile. The fall in the Kanawha, over a distance of 97 miles is about 1.42 feet per mile. The fall in the lower portion of the New, between Hinton and the Gauley, the area commonly referred to as the "gorge" is approximately 698 feet or 11.2 feet per mile. It is in this reach that the Respondent's Hawks Nest project is located. Between mile 90 and 97 of the Kanawha the fall is about 7 feet per mile. It is here namely, near mile 95.7 that the Respondent's Glen Ferris project is located.

The drainage area of the New and Kanawha Rivers at Kanawha Falls is 8,367 square miles. Due to the seasonal variations in rain fall there is a marked fluctuation in the flow of the New River. The maximum flow of the New and Kanawha Rivers immediately below the junction of the Gauley was 270,000 cubic feet per second on September 14, 1878, the minimum flow 640 cubic feet per second on August 15, 1930. The average flow of the New River at its mouth is in excess of 10,000 cfs; the average flow of the Gauley at its mouth is more than 2500 cfs; and the average flow of the Kanawha immediately below the junction of the New and Gauley, at Kanawha Falls, measured over a period of 84 years is 12,570 cfs. Aside from other conditions, it is quite clear that the New and the Kanawha Rivers contain an abundance of water to sustain extensive commercial navigation.

The Respondent's Glen Ferris project is located a little more than a mile below the junction of the Gauley and the New Rivers at the Kanawha Falls. In the last century a wooden dam and lumber mills were located at almost the same site. The wooden dam was replaced by a concrete dam in 1919. The present dam is from 6 to 12 feet in height. The Glen Ferris plant has a generating capacity of 4800 kw. The Hawks Nest plant consists of four generators which has an installed capacity of 102,000 kw. Both plants are operated essentially as a unit, the entire electrical output being utilized by the Respondent's arc furnaces at Alloy a few miles downstream on the Kanawha.

The sole issue in the present proceeding is whether the New River and the Kanawha River, where the Respondent's Hawks Nest and the Glen Ferris projects are respectively located, are navigable waters of the United States within the meaning of Section 3(8) of the Federal Power Act, and whether these projects are subject to the jurisdiction of the Commission in respect to licensing.

The New-Kanawha River basin has been the subject of large Federal expenditures in recent years. During these years more than 200,000 acres of forest lands have been acquired by the Federal Government in the New, Gauley, and the Greenbrier River watersheds at a cost of more than a half million dollars according to a report made to Congress by the National Forest Reservation Commission in 1960. *Sen. Doc. 74, 86th Cong., 2d Sess.* The Weeks Act as amended pursuant to which these lands were acquired authorized their pur-

chase for the purpose "of preserving the navigability of navigable streams" and for "the regulation of the flow of navigable streams or for the production of timber * * *" et cetera. (Act of May 1, 1911, ch. 186, 36 Stat. 961; Act of June 7, 1924, ch. 348, 43 Stat. 653).

In 1938 Congress authorized the completion of the Bluestone Dam and reservoir on the New River, near Hinton, West Virginia. (Act of June 28, 1938, ch. 795, 52 Stat. 1215). The Bluestone Dam is 180 feet in height and 2048 feet in over-all length. The reservoir is 36 miles in length and provides a storage of 631,000 acre feet of water. The project was designed and constructed for flood control purposes and in aid of navigation. (*United States* v. *West Virginia Power Co.*, 122 F. 2d 733, 734). It was constructed at a cost of about $28,000,000. A dam and reservoir at Sommersville, some 34 miles up the Gauley is now under construction (as of 1960) by the United States Corps of Engineers. The estimated cost of this project is $47,800,000. Another dam and reservoir have recently been constructed by the United States Corps of Engineers about 100 miles up the Elk River, a tributary of the Kanawha, near Sutton, West Virginia. In 1960 the cost of this project was estimated at $34,500,000. These dams provide a means of controlling the run-off in flood season and of increasing the low water discharge during the remainder of the year. The reduction of flash floods is an aid to sanitation and to navigation on the Kanawha and Ohio. Such reduction also decreases property losses which frequently accompany flash floods.

At various times covering a period of nearly a century the Federal Government has expended large sums of money to improve navigation on the New and the Kanawha Rivers or their tributaries. Congress appropriated funds rather regularly for this purpose between 1870 and 1888. (16 Stat. 223, 226; 17 Stat. 370, 376; 18 Stat. 237, 240, 243; 19 Stat. 132, 134; 20 Stat. 152, 155, 157, 161, 363, 364, 365; 21 Stat. 180, 185, 468, 470, 475; 22 Stat. 191, 199; 24 Stat. 310, 319, 334; 25 Stat. 400, 412). Most of these funds were spent on the Kanawha and on middle reaches of the New. Dams and locks were constructed on the Kanawha following 1875. Some 10 locks and dams constructed in 1898 afforded a six-foot channel for navigation. Between 1934 and 1937 these facilities were supplanted by three improved dams and locks now located at London, Marmet, and Winfield providing a nine-foot navigable depth extending more than 90 miles up the river from its mouth. The cost of the latter improvements including the dam at Gallipolis, Ohio, was approximately $22,000,000. *Annual Report * * * U.S. Army Engineers, H. Doc. No. 4, 87th Cong., 1st Sess. (1960).* The trade now carried on through these locks is extensive. The total annual cargo which moved on the Kanawha River in 1960 was in excess of 10 million tons.

At this point it should be observed that the New River between Hinton, West Virginia and Allisonia, Virginia (mile 62 to 173) (see Appendix B)* was held to be a navigable water of the United States by the Supreme Court in *United States* v. *Appalachian Electric Power Co.*, 311 U.S. 377, 419 (1940). The present proceedings involve the New River below this area, namely, the Hinton-Gauley reach (mile 0 to 62). It also involves the head waters on the Kanawha immediately below the mouth of the New and roughly between miles 91 and 97 of that river.

The meaning of navigable waters as defined by the Federal Power Act, in section 3(8), 16 U.S.C. 796, is as follows:

> (8) "Navigable waters" means those parts of streams or other bodies of water over which Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several states, and which

*Appendix B has been reproduced from Appendix E of Staff's brief.

either in their natural or improved condition *notwithstanding interruption between the navigable parts of such streams or waters by falls, shallows, or rapids compelling land carriage, are used or suitable for use for the transportation of persons or property in interstate or foreign commerce, including therein all such interrupting falls, shallows, or rapids,* together with such other parts of streams as shall have been authorized by Congress for improvement by the United States or shall have been recommended to Congress for such improvement after investigation under its authority.

The Kanawha River generally has long been regarded as a navigable stream. It has been navigable in fact from early times. Chief Justice Marshall in his, *Report of the Commissioners* * * * to the State of Virginia in 1812 assumed that the Kanawha was navigable between the Gauley and the Ohio. In this report he stated:

> Immediately above the mouth of Gauley, the river opens and presents a beautiful sheet of deep smooth water, which is succeeded by the rocks over which it dashes, and forms the Great Falls of Kanhawa (Kanawha). The height of these falls is twenty feet four inches. With its name the river loses its wild and savage aspect * * * Below, quite to the rocks which have fallen from the brink over which the cataract rushes, is a deep smooth and beautiful basin. The river is so wide as to rise, in the greatest freshes, only six or seven feet * * * At the Great Falls of Kanawha there is, near Morris's mill, a very eligible place for locks (p. 20, 21, 24).

In the Fourth and Fifth Annual Reports of the Board of Public Works to the General Assembly of Virginia * * * 1821, Briggs and Moore (at page 32) describe the first few miles below the Kanawha Falls as follows (the Kanawha Falls is at mile 95.7):

> On the *2nd* of the *8th* month we commenced the examination, levelling and survey of the Kanawha river below the great falls. The following is the substance of the notes taken on the occasion. In the estimates for improvement it is calculated to give three feet depth of water at all times.
>
> 1st mile—About ¾ very deep and level to the head of long shoal; the last ¼ swift water, but tolerable navigation.
>
> 2nd mile—About ¾ the remainder of the long shoal; the water is sufficiently deep, but several detached rocks require removing; if the proper boats and apparatus be provided, the expense will not be great; (say)---------- $600
>
> Fall 9.54 f.
>
> 3rd mile—Excellent navigation the whole mile. Fall 0.78 f.
>
> 4th mile—Begins with a brisk current and for a short distance about 2½ feet deep; then deeper for some distance; after which some ledges of flat rock occur, over which there cannot be carried at this very low state of the water more than about 18 inches; then, deep strong water to the end; It is probable there might be expended on the ledges to advantage about---------- 250
>
> Fall 4.32 f.
>
> 5th mile—Begins with strong deep water; but the loop shoal soon commences; it is composed of gravel, and shows evident signs of shifting. In places there is at present not more than 15 inches water. To improve this shoal a sluice in a proper direction ought to be opened through several gravel beds; which, if rightly executed, would not

be liable to fill, except in extraordinary cases of ice, &c. With a good machine for the purpose this might probably be done for..... $800
Fall 6.61 f.

6th mile—Excellent navigation. Fall 0.44 f.

7th mile—The same. Fall 2.22 f.

8th mile—The same. Fall 1.22 f.

By Section 3(8) of the Act "navigable waters" include streams or parts of streams and falls and rapids, over which Congress has jurisdiction under its authority to regulate commerce among the several states which in their natural condition *are used or suitable for use* for the transportation of persons or property in interstate commerce.

There is evidence that for several years in the last century logs were floated down the New and the Gauley Rivers into the Kanawha and into the area where the Respondent's Glen Ferris project is located. A lumber mill existed near the Glen Ferris site, between the 1820's and the 1880's. The courts have held that logging and rafting is evidence of navigation. *The Montello*, 20 Wall. 430, 441. The United States Corps of Engineers recognized this fact when the Willson Aluminum Company, a predecessor in interest to the Respondent, in 1899 requested permission to construct a private dam (Glen Ferris) on the crest of the Kanawha Falls. Although the rafting of logs had ceased by then the War Department granted permission to build the dam on condition that in case of any future need by lumber interests Willson or its successor would build a lumber chute to facilitate the passage of logs.

As already noted, through improvements consisting of three dams and sets of locks the Kanawha now has a nine-foot navigable depth over its entire course except for approximately six miles in the upper reach where it becomes more shallow and where the Kanawha Falls are located. Although the London Dam provides a pool virtually to the foot of the falls the nine-foot navigation channel ends near mile 90.5. The Respondent contends that this reach including mile 95.7 where its Glen Ferris project is located does not constitute navigable waters of United States. The respondent presented evidence to show that there is no modern navigation in this reach and that the water depth is insufficient to accommodate nine-foot navigation. This clearly is not the test of navigability. Navigability under Section 3(8) of the Act cannot be equated with nine-foot navigation. But the respondent does not deny that this area of the river is susceptible of improvement and of being made navigable to commerical craft. The engineers Briggs and Moore, more than a century ago, were of the opinion that the falls here encountered might be bypassed by dams and locks. The relatively low falls certainly would present no insurmountable obstacle to modern engineering if there were a need to extend modern means of water transportation to this reach of the river.[3]

In its initial brief the Respondent admits that there is some slight evidence of navigability in respect to the upper reaches of the Kanawha. But it does

[3] It should be observed in passing, for example, that seven locks at the Welland Canal in Canada constructed in 1932 provide a lift of 323 feet and enable ships to by-pass the Niagara Falls; that two locks near Massena, New York, constructed in 1954–1958 provide a lift of nearly 90 feet, enabling ships to by-pass the Moses-Saunders Dam and the former falls in the 44-mile stretch of the International Rapids section of the St. Lawrence River; and that two locks at the Wilson Dam on the Tennessee River provide a total lift of 89 feet, and another lock constructed in 1935 at the Wheeler Dam, also on the Tennessee in Alabama, has a lift of 50 feet. See, *Saint Lawrence Seaway Development Corporation Annual Report for the Year Ending December 31, 1959*, pp. 6, 9; *Annual Report of the TVA*, 1934, H. Doc. 82, 74th Cong., 1st Sess., pp. 17, 18, 24; *Annual Report of the TVA*, 1935, pp. 3, 10.

not press the point of non-navigability. The Respondent rather falls back on legal arguments to support its contention that the Glen Ferris project is exempt and therefore need not be licensed. But it would be strange indeed, under present circumstances, to hold that a few miles of a great river on which there is more than 10,000,000 tons of commerce annually is not navigable when that reach of the river might be improved in the same fashion as other reaches of the river have been improved. The question is not whether modern commercial watercraft are using the Glen Ferris reach of the river but whether it is susceptible of improvement and use. As was said by the Supreme Court in *The Montello*, 20 Wall. 430, 44, "The capability of use by the public for purposes of transportation and comerce affords the true criterion of the navigability of a river, rather than the extent and manner of that use. If it is capable in its natural state of being used for purposes of commerce, no matter in what mode the commerce may be conducted, it is navigable in fact, and becomes in law a public river or highway." The evidence discloses that the upper reaches of the Kanawha have been navigated, have been used for the transportation of property, and the floating of logs. There is no question of the abundance of water for navigation, prior use, or capability of improvement. The fact that this reach of the river has not been used for many years and is not now used by commercial craft does not make it non-navigable under Section 3(8) of the Act. *Wisconsin Public Service Corporation* v. *Federal Power Commission*, 147 F. 2d 743, 748, cert. denied 325 U.S. 880. In fact these few miles of the Kanawha are similar to the rapids and shoals commonly flooded by dams and by-passed by locks in other rivers, and navigability in legal contemplation is not destroyed because a stream is interrupted by occasional natural obstructions or portages. *Montana Power Company* v. *Federal Power Commission*, 185 F. 2d 491, 494, cert. denied 340 U.S. 947. Indeed it may be said that Section 3(8) of the Act was specifically intended to cover cases such as this. We think it is clear that notwithstanding the fall in the Kanawha at the site of the Respondent's Glen Ferris project and that no commercial navigation presently exists in this reach of the river, it is a navigable water of the United States within the meaning of Section 3(8) of the Federal Power Act. *Economy Light & Power Co.* v. *United States*, 256 U.S. 113, 122, 123; *United States* v. *Utah*, 283 U.S. 64, 86; *United States* v. *Appalachian Power Company*, 311 U.S. 377, 409.

Navigability of the New River. We turn now to the area between the Gauley and the town of Hinton (miles 0 to 62), and a consideration of its navigability. The Respondent's Hawks Nest powerhouse is located at about mile 1.5 and its dam near mile 6.8. The Respondent claims that the Commission is without jurisdiction to require the licensing of its Hawks Nest project because the Hinton-Gauley stretch of the New River does not constitute navigable waters of the United States. The Respondent says that the river here "has never been, and is not now, navigable in fact, and is not suitable for navigation." As will be shown we think the Respondent's contention is erroneous and that this reach of the New River is also a navigable water of the United States within the meaning of the Federal Power Act, Sec. 3(8).

As previously intimated the New River is more than 250 miles in length. It has its beginning near the North Carolina-Tennessee line. The span of the river between Allisonia, Virginia and Hinton, West Virginia (miles 62 to 173) was held to be navigable by the United States Supreme Court in the Appalachian case in 1940. We are here concerned with the navigability of the span of the river between Hinton and its mouth (miles 0 to 62). At the hearing the parties put in evidence photographs of the Kanawha Falls, views of the New River before and after construction of the Hawks Nest development, and aerial photographs of the area between the Kanawha Falls and Hinton. The United States

Department of the Interior Geological Quadrangles of the Hinton Gauley reach of the New River were also introduced as well as early surveys.

The pool created by the Glen Ferris Dam extends upstream some two-and-a-half miles to the foot of the Hawks Nest Powerhouse. The powerhouse is connected with the Hawks Nest Dam some five miles further upstream and about 6.8 miles above the mouth of the New River by means of a tunnel which diverts the normal water flow from the intervening river bed.[3] Another pool is created by the Hawks Nest Dam and extends upstream some three or four miles depending upon the pool level maintained. In its natural state the gradient of the river is more pronounced for about the first twenty miles above its mouth. Thereafter for the remaining distance to Hinton, the fall in the river is less precipitous being about 8.6 feet per mile. Between the ledges and rapids the river presents a series of shorter and longer pools.

At the hearing the Respondent produced several elderly witnesses who testified as to their recollection of the use of the river. The witness Prince testified that logs were not rafted down the Hinton-Gauley reach of the New River for the reason that "it was too rough." The witness Martin testified that between 1898 and 1905 lumber and staves were unloaded from bateaux at Hinton and then loaded on railway cars but that he never knew of any boating or hauling downstream from Hinton. The witness Wilson testified that the Hinton-Gauley area of the river had not been used to transport persons or property except to cross by ferry. The witness Garvin testified to the same effect, as did the witness Bragg. The witness Holland testified that there was no rafting of logs on the river. Two other witnesses testified that they knew of no transportation up and down the New River below Hinton although one admitted rafting down the Greenbrier. The witness Allen testified that coal and lumber were shipped by rail but that there was no shipment by water on the New River including rafting of logs; and all the transportation that he had heard of in the gorge was by C&O Railway. The last of the elderly witnesses, Vawter, aged 70, a life-long resident of Ansted, West Virginia, near Hawks Nest, stated that there had been no industrial activity along the stretch of the New River from Hinton to the mouth of the Gauley, and that the coal industry and some timbering started with the completion of the C&O Railway in 1873, when coal and timber were moved only by the C&O Railroad.

The testimony of all of the Respondent's elderly witnesses was similar in character. They knew of no transportation of persons and property on the Hinton-Gauley reach of the river except across the river by ferry. Their testimony was necessarily limited in time, principally to the closing years of the last century and the beginning of the present. None evidenced any detailed familiarity with conditions or transportation in earlier years including the 1870's and 1880's. But there is creditable evidence to the effect that there was navigation and rafting of logs in the Hinton-Gauley area during the last century.

In the case of *United States* v. *Appalachian Electric Power Co.*, in the United States District Court in Virginia in 1939, the witness Paul L. James testified to considerable shipments and the floating of logs in the Hinton-Gauley area of the New River at an earlier period. (See Transcript of Record, Supreme Court of the United States, October Term, 1939, at pp. 310, 313, 316). His testimony was introduced at the hearing and reads in part as follows:

> I am 63 years old. My father was in the lumber and logging business-stave business. He had his saw mills and planing mills at Hinton and

[3] The diversion is virtually complete except for times when the flow of the river is above average (about 10,000 cfs).

converted timber into building material. I was connected with his lumber company in later years when I became old enough. I was bookkeeper and secretary and treasurer of the organization. From the time I was old enough to do any work at all I was brought up in the saw mills, planing mills, and offices of the company. At first it was a partnership between my father and his brothers. The firm name was William James & Sons. After a number of years it was incorporated under the name of William James Sons Company. * * *

* * * * * * *

Q. How many years did that cover?

A. Well, my father went to Hinton in 1870. I would say 45 to 55 years he was in there operating. * * *

Q. State whether or not your company ever purchased or gathered logs at what is known as Sandstone Falls on New River or near that vicinity?

A. *We had gathered our own logs and the logs of the St. Lawrence Boom Manufacturing Company at Sandstone [mile 54.6], Kanawha Falls and as far down the river as Charleston.*

* * * * * * *

Q. And what did you do with those logs which you got down there? How would you get them ashore?

A. They were generally picked up by different people along the river and rafted and we would sell them to some saw mill and ship the lumber or sell the logs.

Q. Where would you ship the lumber to?

A. After I went to keeping the books, my father went to Columbus, Ohio, and opened a retail lumber yard and we shipped practically all of the lumber we sawed that run through our planing mills to Columbus, Ohio, but we had business all along the river and we had business in Boston and Cincinnati. We shipped lumber wherever we could sell it.

Q. *And you gathered lumber, as I understand it, not only at Sandstone Falls but at other points down the river as far as Charleston?*

A. *Yes, Montgomery, Kanawha Falls, Sandstone, and Charleston were the four principal places that we could dispose of the stuff easy and that is where we could collect it.*

Q. And some of that, as I understand you, you shipped direct to Columbus, Ohio—some of these logs?

A. Not logs—the cut timber.

Q. How did you know that those logs which you floated down were your logs? * * * Q. Was there any way of your knowing?

A. Yes, whenever a log was taken up and measured in the woods or on the river bank, we had a "J&S" that was stamped on both ends of the logs.

Q. What did the J & S stand for?

A. James and Sons.

Q. Was that a custom with the other lumber companies?

A. Yes, every logging company that did any logging on the river had their own private marks * * *

Q. I think you testified that your company moved about from two-and-a-half to three-and-a-half million feet of lumber a year, is that right?

* * * * * * *

A. I would certainly think we handled a third of the business on the river. That would make somewhere between seven and ten million feet (board-feet) handled on the river.

Q. How many years would you figure there was such an amount of timber on the river?

A. We were in the business there forty-five or fifty years. * * *

The Respondent quotes from *Peters and Cardens, History of Fayette County, West Virginia* (1926) to the effect that:

> Some of the best yellow poplar, black walnut and other timber growing along the Great Kanawha and the Gauley Rivers was cut and rafted out about 60 years ago. [1866] The New River is too rapid for even the successful drifting of single logs and, as there was no other means of transportation then, the bulk of the timber in the interior remained until a later date.

This was before the appearance of the railroads in this area. But in the same History the authors state elsewhere (at p. 581):

> During the eighties, the Stockton Lumber Company operated a large water power saw mill, at the site of the Electro Metallurgical Company's plant at Glen Ferris. Saw logs were conveyed by water to Kanawha Falls and held in a large boom in the basin below the falls. * * *

In James H. Miller's *History of Summers County*, published in 1908 it is stated:

> A. E. Miller and W. N. McNeer lumbered extensively at one time on Lick Creek [mile 52]; also J. W. Alderson and W. B. Dean, and the Dean Lumber Company, which was composed of Dr. Fletcher Dean and William Ballard Dean, sons of George W. Dean.
>
> * * * The Wm. James Sons' Co. during the winter—the dry season—would prepare a large run of logs, containing many hundred thousands of feet; then, when the floods came, run them down to their boom, and finally to their mill. * * * If the boom broke, or it was an extraordinarily high flood, many logs would escape down the river, probably being caught in the Kanawha, or going on out into the Ohio * * *
>
> * * * *A. E. & C. L. Miller at one time did a considerable lumber business in the upper Lick Creek county.* * * *
>
> There has also been a large planing mill and lumber business done at New Richmond (mile 52.8) in the last ten years. [Emphasis supplied.]

Respondent admits that there was lumbering and rafting on the New River at or above Hinton, and on the Kanawha at the Kanawha Falls but claims there was none on the intervening stretch of the New River and if so it was purely of a local nature. In the light of the evidence this is incredulous, and contrary to fact. It is true that for geographical reasons lumbering and rafting was more extensive at Hinton and at the Kanawha Falls, but it is not necessary to prove that rafting existed mile by mile in the intervening stretch of the river. It is enough that there was rafting within the area of the river between Hinton and the Kanawha Falls and from one point to the other. The evidence discloses that there was rafting from the tributaries Greenbrier, Bluestone and Leatherwood to the New, and from the Gauley at the mouth of the New. The New River has several tributaries between Hinton and the Gauley such as the Laurel, Meadow, Glade, Piney and Dunlop Creeks. Lumber mills existed on the New below Hinton particularly at Sandstone and Lick Creek. We are also told that when the booms gave way during the Spring floods upstream the New or its tributaries the logs were picked up at the Kanawha Falls, or at Charleston.

It is urged by the Respondent that the Hinton-Gauley reach of the New River does not constitute navigable waters of United States because the Secretary

of War (now the Secretary of the Army) and officers of the Corps of Engineers, United States Army have reported this reach of the river as not navigable and as unsuited for improvement. In its brief Respondent quotes statements made by various officers of the Corps in support of this. A careful examination of these statements reveals, however, that they were made at particular times and for specific purposes and that they have little or no probative value under the present circumstances. For example, Respondent quotes a statement of Major F. W. Altstaetter dated November 21, 1912 that:

> * * * This whole section (Hinton-Gauley) is unfavorable for navigation, and the river above it could not be connected with navigation in the Kanawha by the expenditure of any reasonable amount. The navigation between Hinton and Radford must therefore be considered as having no outside river connection. The Chesapeake and Ohio Railroads parallel the river from Hinton to its mouth and continues on down the Kanawha River. *H. Doc. 1410 62d Cong. 3d Sess. p. 4.*

The foregoing statement of Major Altstaetter is taken from a five page memorandum entitled, "Preliminary Examinations of New River *from Radford, Virginia to Hinton, West Virginia.*". Major Altstaetter was then the District Officer of the Corps of Engineers at Wheeling, West Virginia. He was presenting his views and recommendations to his superiors. He was not dealing specifically with the Hinton-Gauley area but the reach above. *As to the reach above* he recommended that no survey be made and that no additional funds be spent on it because most of the lumber near the river had been cut, there was insufficient trade, no demand for improvement by the people in the area, and because the railroad which parallels the river had taken over much of the river commerce. His superior officers Colonel Rossell and General Bixby reiterated his views. Although these officers thought the Hinton-Gauley reach of the New River was unfavorable for navigation, they did not say it was non-navigable. Their chief concern was whether further funds should be requested of Congress and be spent then on improving navigation on the New.

The Respondent quotes further in its opening brief from a letter dated December 29, 1925 by Major General Harry Taylor, Chief of Engineers, in response to an inquiry from the Executive Secretary, Federal Power Commission in connection with a Declaration of Intention filed with the Commission by the New River Development Company. The occasion for the Secretary's request was a proposal to build a power development near Radford. The letter reads in part as follows:

> * * * I am of the opinion that the data and information disclosed in the Department's records and reports do not support the conclusion that the New River affords a channel for useful commerce or that it is navigable in fact. That section of the river between its mouth and the town of Hinton, having a fall of about 735 feet in a distance of less than 60 miles, may be dismissed from the discussion. This Department has reported *that the whole section is unfavorable for navigation and that it could not be connected with navigation in the Kanawha* by the expenditure of any reasonable amount.

There was a difference of opinion, however, among the engineers for in the same letter of December 29 it is also stated:

> The District and Division Engineers have reported that there is no commerce and that the river (New) is not navigable in fact, but assume that it is legally navigable for the reason that money has been expended on it for channel improvement by authority of Congress.

Only four months earlier the Chief of Engineers had advised the Commission differently than in his letter dated December 29, 1925. In a letter dated August 20, 1925 he stated:

> * * * while the navigable capacity of the stream is limited this office must report that no sufficient reason is seen why the Federal Power Commission should not exercise jurisdiction over the proposed project.

Notwithstanding the Respondent's intimations to the contrary, it is sufficient to say that under the circumstances it was not the prerogative of the Corps of Engineers to determine the navigability of the New River. It was the Corps' duty, however, among other things to advise and to make recommendations for improvements, and although the Corps previously had ceased recommending the expenditure of funds to improve navigation on the New River, as we have seen, the Supreme Court has held, notwithstanding the views of the officers expressed above, that 111 miles of the river above Hinton are navigable waters of the United States.

It is true as the Respondent points out that, "on June 1, 1927, the Commission made a finding *that the New River is not navigable waters* within the definition thereof of said act but that the interest of interstate and foreign commerce would be affected by such proposed construction." [Emphasis supplied.] *United States* v. *Appalachian Electric Power Co.*, 107 F. 2d 769, 776; Seventh Annual Report FPC, p. 114. This finding was made in respect to the Declaration of Intention referred to above and was predicated in part at least on the letter dated December 29, 1925 from General Taylor. At that time the Commission was composed of the Secretaries of War, Interior, and Agriculture, but by the Amendment of June 23, 1930, 46 Stat. 797, 16 USCA 792, the Commission's membership was changed to five commissioners. The Commission having become an independent agency, it subsequently sought a review of the question of navigability in the courts. (*Appalachian Electric Power Company*, 1 FPC 3, 4). This occurred and the Supreme Court of the United States reversed the lower courts, and in effect the earlier Commission action, holding as previously stated that the New River in the reach including Radford "is a navigable water of United States." 311 U.S. 377, 401, 419 (1940).

The Respondent asserts that the Hinton-Gauley reach of the New River is not navigable because it would be too expensive to improve. It argues that the gorge through which the river passes makes improvement practically impossible and that the expense would be astronomical. If the physical obstruction were not enough, it points out that "the Chesapeake and Ohio Railway has a double track on the left side of New River and the Great Kanawha upstream to the railroad bridge near Mill Creek, and a single track on each side of the river thence to Sewell (formerly Bowyer's Ferry), with a double track on the right-hand side of the river on up to Hinton; while on the left side of the River, the C & O Railway, not main line, extends upstream to and beyond Thurmond."

The railways are a manmade obstruction to the construction of canals and locks. The tracks are on the banks of the river above the flood line, and it might be said that the river's banks are preempted from use for navigational improvement without the removal of miles of trackage. The expense of acquiring this trackage and right-of-way, it is said, is prohibitory. This is on the assumption that improvement were scheduled for the near future. But a few generations are but a short time in the life of a nation, and it should be remembered that one form of transportation often succeeds another, the Conostoga Wagon, canals, railroads, and aeroplanes. Sometimes there is an abandonment of the existing form of transportation or a reversion to an earlier form. A nation should not

long be bound to one form of transportation to the exclusion of others. So here the presence of railroad trackage on the banks of the New should not be considered as preventing for all time the future development of the river in case of need.

The Respondent does not indicate what type of navigation is envisaged as impossible in the Hinton-Gauley area, but refers simply to slack water. Its cost figures for improvement vary considerably. It relies principally, however, on the testimony of two witnesses, Mr. Pett and Mr. Cooke. Pett, a consulting engineer, was asked how much it would cost to establish slack water navigation from Kanawha Falls to Hinton taking into consideration the Hutton Report, and he testified to a figure of $366 million as the present-day cost. He admitted, however, that this was a "ballpark figure" and not even a preliminary estimate. His estimate was unrealistic and must be rejected. This is quite evident because of the manner by which he arrived at his cost. Mr. Pett inquired of the Corps of Engineers what the cost was of the construction at London, Marmet and Winfield and obtained a total for the three dams of $10,580,000. He then trended these costs to the present, or 1963 using the Handy Whitman Index of Public Utility Construction cost and acquired a figure of $36,600,000. He then stated that the total lift provided by the three locks at these dams was 76 feet. Since the lift in the Kanawha Falls-Hinton reach was about 760 feet he multiplied by the ratio of the lift, so he said, to arrive at a figure of $366 million. He thought the range of cost was somewhere between $250 and $350 million. Although Mr. Pett evidenced a familiarity with engineering problems involved, he did not indicate what if any canals were necessary, how many dams and locks were needed, or their specifications, what depth channel would be provided or whether the dams would be built to accommodate generating plants. It is common knowledge that the Kanawha River is much wider than the New River in this reach but the length of the proposed dams apparently was not considered by Mr. Pett, only the total lift.

The witness Cooke in one respect at least was more realistic. He stated that only the very highest lift locks and dams can be constructed or should be constructed. But in making his estimate of the cost of improving navigation in the Hinton-Gauley area he fell back essentially on the old Hutton report of 1877. He testified that "Assuming that you had 25-foot lifts over the total fall there of almost 750 feet, it would be about 30 locks and dams which would certainly cost at least ten million dollars apiece at this time." He didn't say how he arrived at the cost figure for each dam and lock of $10 million. His estimate of 30 locks is almost the same number as in the Hutton report of 1877 (33 locks), but it is evident Mr. Cooke arrived at the number simply by dividing the differential in elevation of 750 by 25. His testimony in respect to cost left much to be desired. To say that canals should be built today based on a survey of 1877 would be similar to installing an 1890 steam reciprocating engine on a modern destroyer.

Although the witnesses Pett and Cooke evidenced concern as to the operational problems in navigating the locks if the New River were improved, both seem to have had in mind operating modern barges, perhaps in tandem, in a canal system of 1877 design. Their testimony discloses that they had little, if any, experience with ships or navigation.

The Respondent infers that since the Government took the position in its complaint filed in the *Appalachian* case in the United States District Court (107 F. 2d 769, 774) that the New River "throughout its whole course constitutes navigable water of United States" but abandoned "this extensive claim" in the Circuit Court of Appeals and the Supreme Court, and limited it to the stretch from Allisonia, Virginia to Hinton, West Virginia, the Government thereby rec-

ognized that it could not prove navigability throughout the river's course and that the other reaches, therefore, were non-navigable. This does not follow. The question in issue in the *Appalachian* case was the navigability of the river at or near Radford, Virginia where it was proposed that a dam and power plant be built. It was sufficient in that case to have a determination only in respect to the interstate stretch of the New which included the proposed dam site near Radford. On appeal the Government wisely confined its claim to what was needful.

As previously indicated the New River and the Kanawha have an abundance of water for navigation. The natural channel of the New has a depth of about 2 to 6 feet or more at average water level. The physical characteristics of the river for several miles below Hinton are not unlike areas above Hinton. The boats commonly used in the commerce which existed above Hinton in the last century and prior to World War I consisted of bateaux or keel boats having a length of from 50 to 70 feet, and were capable of carrying from 10 to 12 tons. (311 U.S. 377, 410–412). There is no question but that the commerce previously carried on the New River, as well as the present commerce on the Kanawha, is interstate in character. The lumber derived from the rafting in the last century was also shipped in interstate commerce.

That the New River, including the Hinton-Gauley span, was considered as navigable, was in fact navigated, and believed capable of improvement is evident from early government sources. Thus in a report made to the General Assembly of Virginia by the Board of Public Works in 1819 commonly identified as the Moore and Briggs report it is stated:

> This is truly a noble river. Notwithstanding it was represented to us as being remarkably low, yet it afforded a super-abundance of water for every purpose of internal navigation. The fall in this part of the river, considering the mountainous country it passes through, is comparatively moderate. The principal falls are, the Bull-falls, McDaniel's, Anderson's, Wiley's, Neilley's, and Peter's mountain falls: none of which has ever been improved in the least degree; yet we ascended them all with our boat; though in two or three instances, with considerable difficulty, after taking out our baggage, stores, &c. The breadth of the river from 2 to 300 yards, and the length of this section 55 miles 58 perches.

After ascending the New River for some 56 miles, as described above, Briggs and Moore descended from the Greenbrier to the Gauley in a craft 56 feet long and 7 feet wide. They described the river mile by mile, noting the falls, the "good navigation" and hazards. On one occasion they stated,

> We had again to unload and take down our cabin, and then get deep into the water behind a rock and hold the boat by a rope attached to the stern. * * *

In this span they recommended sluicing and tracking and the construction of four locks. Their estimate for improvements totaled $58,700.

In a *Report of the Commissioners Appointed to View Certain Rivers within the Commonwealth of Virginia* [Printed 1816] Chief Justice Marshall records his travels and survey of the head waters of the James River and the Great Kanawha Marshall and his party left Lynchburg, Virginia in the autumn of 1812 traveling upstream on the James to the mouth of Dunlap Creek, thence overland to the Greenbrier down the Greenbrier, and the New to the Kanawha. In making his report he stated in part:

> The difficulties encountered in descending this river (the New) were of a character essentially different from those which were experienced in the

Greenbrier. Uncommon as had been the drought, the supply of water was abundant. The boat sometimes, though rarely, rubbed upon a shoal; but in every such case it was apparent that a sufficient passage might be opened without much labor or expense. * * *

Here, for the first time, (Lick Creek Falls) the boat was taken out of the water and let down by skids.

The ground along which a canal may be carried around these falls, pursuing the course of Richmond's mill-race, was measured, and the elevation taken. The descent was found to be twenty-two feet nine inches, in one-hundred-and-eighty-one poles. * * *

The practicability of rendering the Greenbrier navigable has already been stated. The system which may be found best adapted for the improvement of James River, will be equally applicable to the Greenbrier, and will be equally successful * * * they are both capable of being brought into extensive use. Not only in descending, but in ascending also, these rivers may be navigated to great advantage.

With respect to New River, a judgment cannot be formed quite so decisively, nor pronounced so confidently. The difficulties are great, and deserve to be seriously considered.

The boat which conveyed your Commissioners, passed from the mouth of the Greenbrier, to the place where their expedition terminated, without being taken out of the water, except at the Great Falls of New River, and at the Great Falls of the Kanawha. It was navigated in the usual way through all the other difficult places which abound in New River, except two—both below Bowyer's Ferry. Through there it was conducted by ropes.

The boat was not laden, nor was it empty. In addition to the number of hands usually employed in navigation, it carried between two and three thousand weight. The greater part of this burden was taken not in the most difficult places; but in many of considerable magnitude, it remained in the boat. Where the vessel was guided by ropes, the necessity of resorting to this expedient was occasioned solely by the intervention of rocks, which can be removed. * * *

Having stated their view of this subject your Commissioners will only add their opinion, that the New River may be relied on with certainty, for the transportation of articles from East to West. * * *

Marshall and the Commissioners considered the James River, New, and Kanawha as one of the transportation routes from the Atlantic Seaboard to Ohio and Kentucky.

In his report he recommended the construction of sluices and locks to improve navigation in the New River, and the construction of a horseway along the bank, particularly between the Kanawha Falls and Bowyer's Ferry in aid of eastward navigation. He reported that whatever doubts may be entertained in respect to boats ascending the New River he and his Commissioners were entirely persuaded of the practicability of using it advantageously between the ferry and the mouth of the Greenbrier.

The Respondent minimizes the fact that John Marshall navigated the Hinton-Gauley stretch of the New River downstream in 1812 and that Moore and Briggs did the same in 1819. It characterizes these trips as mere exploratory ventures. To be sure their trips were slow and crude measured by modern standards. As a people today we perhaps do not value water transportation in the same manner as the Dutch or the Chinese. We are apt to forget that the state of Pennsylvania at one time had almost a thousand miles of canals. But it must not be forgotten that before the coming of the railroads armies were often moved

hundreds of miles in shallow watercraft. Portaging was common. At that time there was practically no means of transportation except by horse and wagon overland. To move a ton or two of goods and raw materials a hundred miles or more over unimproved roads in all seasons of the year was often a herculean task, whereas five or ten tons could often be moved by water more cheaply and advantageously. This was often true notwithstanding the necessity of portaging, one way traffic, or taking advantage of spring freshets.

The Respondent makes much of the great danger in navigating down the New River. Such a trip doubtless had its perils as did all river travel in early days. Curiously enough the Chief Justice of the United States although then in his late fifties did not shield himself of this danger.

One of the reasons for the failure to improve the navigation on the New in the time of Moore and Briggs is found in this statement contained in their report:

> * * * several small tracts of bottom land are found in the first 10 or 12 miles, but from thence to Bowyer's ferry, 10 acres of good land in a body rarely occurs. *About 5 or 6 small cabins are the only human habitations that are to be seen in 35 miles.* From the mouth of Man's creek ¼ below Bowyer's ferry to the mouth of Gauley River 18 miles, not a trace of human industry or art is anywhere to be seen, except a part of a small field which approaches the river at the mouth of Mill creek. Indeed for a large portion of that distance a spot of earth of sufficient dimensions for the ground plan of a moderate sized dwelling house is rarely to be seen.

When the Federal government first made funds available for river improvements in the 1870's the Corps of Engineers utilized such funds in the reaches of the New River where they would be most felt and where there were thriving industries, iron mining, and rail connections. With the construction of the rail lines serving the same and adjacent areas with rapid service to distant points, river traffic diminished and gradually vanished as it did in many other parts of the country where rail transportation was in competition with water.

It should be borne in mind that in making annual appropriations for the improvement of navigation on the New River Congress recognized it as a navigable water. Unlike numerous other streams or particular reaches of them, as found in 33 U.S.C. 21 *et seq.*, Congress never declared the New to be non-navigable. The fact that Congress dealt with the New as a navigable stream of the United States, while not conclusive, is a circumstance of considerable importance and is given great weight by the courts. *United States* v. *Brewer-Elliott Oil and Gas Co.*, 249 F. 2d 609, 618.

The Respondent suggests that navigation on the New River is put beyond recovery by the construction of the Bluestone and the Clayton dams upstream. If this contention were accepted then it follows that the artificial obstructions, such as the railroads and the construction of the Respondent's Glen Ferris and Hawks Nest projects forever preclude the development of the rivers for navigation or otherwise where these facilities are located. But it is common knowledge that such facilities sometimes may be removed or changed and some dams are built so that they can be modified to accommodate lift locks or be by-passed by canals or locks. Again, suppose navigation is not improved but power projects are built and licensed, does this make the stream non-navigable and beyond Federal control. The answer is clearly "No." In *Wisconsin Public Service Corporation*, 3 FPC 495, 507, it was held that if the Wisconsin River was navigable prior to the construction of dams for maintenance of which Federal authorization had not been obtained, the dams may be abated, and their presence in the streams does not in any way constitute a bar to a finding of navigability nor to an assertion of Federal jurisdiction. See also *Wisconsin*

Public Service Commission v. *F.P.C.*, 147 F. 2d 743, 749; *Economy Light and Power Co.* v. *United States*, 256 U.S. 113, 118 (1921); *Pennsylvania Water and Power Co.*, 2 FPC 61, 66.

As previously indicated, the Respondent's Hawks Nest dam is located upstream from its powerhouse and is connected by a tunnel so as to increase the head and generating capacity. At the time of construction the Respondent obviously utilized the latest improvements known to science to secure the maximum power capacity from the available water. It is therefore somewhat anomalous that the Respondent should now contend that it is impossible to make the New River navigable and that the physical features of the river prevent its improvement for navigation notwithstanding the scientific improvements in the last half century in the construction of canals and locks.

In addition to the evidence heretofore referred to as evidence of navigability, the staff also points to various ferry crossings in use in past years, the testing of Army floating equipment during World War II near Stretchers Neck, and the present use of pools in the Hinton-Gauley reach by pleasure craft. If this evidence alone is insufficient to determine navigability, it is certainly of significance when considered with others.

As has been indicated, extensive trade and navigation existed on the New River during the last century and the Supreme Court has held that 111 miles of the river above Hinton are navigable. (*United States* v. *Appalachian Power Co.*, 311 U.S. 377, 411, 418.) The river below Hinton has also been navigated and was used for several years for the rafting of logs. But even if the Hinton-Gauley section of the river were never navigated or if it is impossible of improvement for navigation, which we do not intimate, but which is contended for by the Respondent, this stretch is navigable within the meaning of section 3(8) of the Act notwithstanding that portaging may be necessary over this reach or connections made by road or rail between the river above and below. In this respect the Hinton-Gauley span of the New is similar to the Missouri near the Great Falls above Fort Benton. There by a series of rapids and falls the descent in the Missouri is about 520 feet in 17 miles or 30 feet per mile (the gradient is much more than the New), and although the stretch presents a natural barrier to navigation or to connecting navigation above and below, it was held to be a navigable water of the United States. *The Montana Power Co.*, 7 FPC 163, 174; *Montana Power Co.* v. *F.P.C.*, 185 F. 2d 491, 493 (1950).

The tests to be applied to determine the navigability of the Kanawha which have previously been referred to are equally applicable to the New. Actual navigation is one test under the Act. Authorization by Congress for improvement is another. A third test is whether the stream is suitable or susceptible of use or improvement for commercial purposes. As stated in *The Montello*, 20 Wall 430, 441:

> It would be a narrow rule to hold that in this country, unless a river was capable of being navigated by steam or sail vessels, it could not be treated as a public highway. The capability of use by the public for purposes of transportation and commerce affords the true criterion of the navigability of a river, rather than the extent and manner of that use. If it be capable, in its natural state of being used for purposes of commerce, no matter in what mode the commerce may be conducted, it is navigable in fact, and becomes in law a public river or highway. * * *

The fact that shoals and rapids exist in a river, making navigation difficult, is not conclusive of non-navigability. *Ibid.* As adverted to heretofore, many of our great rivers could not be navigated in the early days without a break or portaging, and they constituted a channel for useful commerce. If a river has

been used for purposes of commerce this establishes its navigability, notwithstanding the fact such use has long since been discontinued due to changed economic conditions, artificial obstructions, or improved methods of transportation. (*Economy Light and Power Company* v. *United States*, 256 U.S. 113, 123.)

There is no convincing evidence in this proceeding that the Hinton-Gauley section of the New River is unsuitable for use or improvement for commercial navigation in the event of need. In this regard, in its gradient, its flow, and other characteristics it is not unlike other rivers which have been held to be navigable waters of the United States. (A few examples in passing are of interest: the Rackette River, in *Central New York Power Corporation*, 8 FPC 390, 547; the Sacandaga River in *New York Power and Light Corporation*, 8 FPC 231; the Menominee River in *Wisconsin Michigan Power Company*, 3 FPC 449, 455; the Wisconsin River, in *Wisconsin Public Service Commission*, 3 FPC 495, 508; the Great Falls Section of the Missouri River, in *Montana Power Co.*, 7 FPC 163, 174; and the Clyde River, in *Citizens Utilities Company*, 21 FPC 233, 240.).

Considering the actual use of the Hinton-Gauley span of the New River, its suitability for use for the transportation of persons and property in interstate commerce and all the evidence of record, it is concluded that this portion of the river constitutes navigable waters of the United States within the meaning of the Federal Power Act.

Projects Affecting Navigation and Interstate Commerce. The Respondent contends that the Hawks Nest and Glen Ferris developments do not and will not affect navigation downstream on the Kanawha. At the hearing and in its briefs the Respondent went to great length to show that the operations of its projects in no wise impaired present day navigation in the Kanawha. One of its witnesses, Mr. Ours, testified that no complaints about the operation of its facilities had been received from the Corps of Engineers, and that its operations had no effect upon navigation in the London and the Marmet pools. Another witness, Mr. Bosworth, a boat captain, who had been engaged in the business of "river towing" and who navigates the Kanawha testified that the operation of the Respondent's dams caused no interference with navigation. Other witnesses testified similarly for the Respondent. The Respondent showed that the Kanawha Valley Power Company's hydroelectric installations at London and Marmet, licensed by the Federal Power Commission, especially the London installation, was permitted to engage in "peaking", *i.e.*, to draw down and utilize water in the London pool more rapidly for a number of hours each day and thereafter to cut off or curtail the flow through the generators permitting a buildup. It was indicated that when the river flow is about 9,000 cubic feet per second the plants are run at full load without any "peaking operations" and for flows between 9,000 cfs. and 3,410 cfs. the peaking capacities at London are used as prescribed in the Federal Power License; and that a draw down of three feet of the London pool is permitted from elevation 614 to 611. Respondent's witness Johnson testified that "insofar as the operations of the London plant are concerned we never have felt that they (the hydro plants upstream) in any way curtail or limit the operation of the London plant."

At the hearing the staff introduced several graphs to establish that at certain times when water was released at Hawks Nest there was an appreciable rise in the London pool elevation and that when it was withheld or the pool was being filled the London pool dropped. The purpose of this evidence was to demonstrate that the fluctuations affected navigation or navigable capacity. The Respondent in turn introduced graphs to minimize the variations and to show that there was no direct correlation between the release of water and the stage of the London pool. The Respondent's witness Pett testified that there was no consistent relationship between variations in release of water at Hawks Nest and variations in

the pool level at London. The Respondent contends that the Kanawha is navigable only to the head of 9-foot navigation (mile 90.57), that its Hawks Nest Dam is located some 13 miles upstream, that its projects are "run of the river", that their operation cannot affect navigation in the London pool or below, particularly in view of the control maintained under the licensed operations at London and Marmet. The Respondent further contends that "affect" means something material, appreciable, and of substantial effect.

It is quite clear that the Respondent's contentions are keyed to downstream navigation only and the existing 9-foot navigation in the Kanawha. The Respondent's arguments therefore, in part at least, are irrelevant. Certainly the Kanawha was navigable before the present dams were built at London, Marmet, and Winfield and before 9-foot navigation was provided. Assuming that the Respondent's Hawks Nest and Glen Ferris projects were non-existent but were proposed to be constructed it would be legitimate to inquire what effect their operation might have on navigation or the navigable capacity both of the New River and the Kanawha in their natural state and not merely on existing navigation on the Kanawha as improved. The location of the Glen Ferris project necessarily entered into the planning, improvements, and erection by the Federal government of the three dams on the Kanawha. As already noticed, the United States Corps of Engineers recognized that the navigability of the Kanawha would be affected by the erection of the original dam at Glen Ferris in 1899. The Corps accordingly reserved the right to require the construction of sluices for the floating of logs. The Respondent's Glen Ferris dam necessarily must be considered in any plans for further improvement of navigation on the Kanawha. Similarly, the diversion of the normal flow of the New River from five miles of its natural channel must always be considered in any future planning and development of the river whether it be flood control or navigation. *United States* v. *Rio Grande Dam and Irrigation Company*, 174 U.S. 690.

It is unnecessary to comment upon the numerous graphs and charts which were put in evidence by the parties. However, by the terms of its license the licensee of the hydroelectric facilities at London and Marmet is required in carrying on its operations to cease or curtail the use of water for power generation in such a fashion as to maintain minimum levels (611 in the London pool) for navigation and lock operations. Thus by reason of the pools that have been created by the dams the effect of the variation occasioned by the operation of the Respondent's projects is reduced. But it inevitably follows that in times of drought and when the flow of the river falls below normal, the withholding or release of water at Hawks Nest is of more importance in maintaining the required elevation in the London pool. And although the Respondent says that the Hawks Nest pool is only one-fourth the size of the London pool, a complete draw down or refilling of the former would most certainly affect the navigable capacity of the New and the Kanawha rivers in their natural state and, indeed, be of consequence in maintaining the elevation of the present London pool in times of low river flow.

The Respondent says that although a complete draw down is possible, it has never occurred, is theoretic, and is not a part of normal operations. The Respondent necessarily benefits by the controls imposed upstream, as well as by the licensed operations downstream. The Respondent argues that its hydroelectric facilities are operated in such a manner as not to affect existing navigation on the Kanawha. The staff says that as the "flow from Hinton decreases Hawks Nest's capacity to regulate London tends to become absolute". But it does not follow that the Respondent's voluntary cooperation will always be a fact or that the government should be dependent on such voluntary cooperation by the Respondent or its successor.

It is of significance that the Radford dam (at mile 145) was licensed by the Federal Power Commission, and that this dam and more particularly the Bluestone dam (at mile 65) are peculiarly important in the control of floods. In controlling floods navigation is also benefited. But flood control and power generations do not necessarily go hand in hand. The primary purpose of power dams is to save or pool water for generation purposes, whereas the purpose of flood control dams is to maintain a low level before the flood seasons so that water can be stored at flood time. Unless all the dams in a stream are subject to control, they are not obliged to operate as a unitary system.

In its brief the Staff argues that Hawks Nest has the capability, under certain conditions, of affecting tug and tow operations in the London pool. As an example of this Staff states that at 6:16 p.m. on December 4, 1961, the operator at Cabin Creek notified the Roanoke power dispatcher of Appalachian Power Company: "Barge on land at Morris Creek. Request to start filling pool." Morris Creek is located at mile 84.8 and the London dam at 82.8. There was no testimony concerning this incident. It is unknown from the record whether the barge was ladened or in ballast, whether it was tied up or in transit, or whether it was inside or outside the channel. The evidence necessarily is inconclusive whether the barge grounded as a result of the withholding of water at Hawks Nest, or the draw down at the London plant, but it must be admitted that Hawk's Nest has the capability of affecting navigation unless there is an offset by operations at London.

The Respondent does not deny that the volume of water flowing into the London pool normally is different when the Hawks Nest plant is in full operation as contrasted to times when there is no generation. The Staff's witness Mr. Coomes testified that this plant "not only is capable of affecting the stage and flow of the New-Kanawha River but actually does so." He testified that the Hawks Nest pool could be drawn down five feet within less than two hours and that filling the reservoir afterwards would cut off the river flow below the power plant for more than seven hours, thus lowering the tailwater elevation downstream from 656.3 to 650 or more than six feet. He indicated that the storage and release of water at Hawks Nest during some of the low flow periods affected the stream flow below and the stage at Kanawha Falls. He testified that on September 15, 1962, there was a release of water at Hawks Nest at a rate of 1500 cfs. resulting in a change in the forebay elevation of more than 3½ feet and a rise of more than a foot in the Kanawha River. Evidence was presented of other specific instances of net changes in elevation of 11", 7", 10" and 1 foot.

If the Respondent's argument were accepted that the operations at Hawks Nest have no practical effect on navigation in the London pool or below by reason of the minimum elevation which is maintained under the licenses of the dams downstream, then how much spilling and withholding is necessary to affect navigation, or at what point is navigation affected? We think the Respondent's contention is not well taken. Under the circumstances, it is not necessary to precisely measure the amount of variation necessary to justify when navigation downstream will be affected. The drainage area of the New and the Kanawha Rivers above Kanawha Falls is 8,367 square miles. There is approximately 1,200 acre-feet of water impounded at Hawks Nest between elevations 815 and 820. The average flow of the New River at its mouth is about 10,000 cfs. The Respondent can virtually terminate this flow at will and for several hours. This water is not so insignificant as to be beyond the reach of the Commission as contemplated by Congress in enacting Section 23 of the Federal Power Act. The stage and flow at London and Marmet must be controlled to maintain a minimum depth for navigation. This is implicit in the licenses. Accordingly,

unless the flow at the London dam is automated with the inflow at the mouth of the New (water from Hawks Nest and the Gauley) it necessarily follows that in times of normal or low flow of the river, the London pool will drop and navigation will be affected during the extended hours of build-up at Hawks Nest. It is concluded, therefore, that the evidence is sufficient to establish that the Hawks Nest and Glen Ferris dams are capable of affecting the flow of water in the New and Kanawha Rivers and of affecting navigation. *Citizens Utilities Company* v. *F.P.C.*, 279 F. 2d 1, 3.

Section 14 of the Federal Power Act. The Respondent says that under the Commission's orders (order of February 26, 1952, and order of August 2, 1962), it is required to show cause why it should not apply for and secure a license for its projects under Section 4(e) of the Federal Power Act, even though they may be located on non-navigable waters of the United States. The Respondent contends that if the Commission seeks to make the Act applicable to projects on non-navigable waters, then Section 14 is unconstitutional because it would deprive the Respondent of its property without the payment of just compensation as required by the Fifth Amendment to the Constitution of the United States. The Respondent says that if it were paid the net investment for its Hawks Nest and Glen Ferris projects as defined in Section 3(13) and in accordance with Section 14, the result could be absolutely nothing or an amount far below the amount which would be just compensation.

The Respondent's argument is based on the assumption that the Federal government will "take over" its projects upon the expiration of the period of any licenses that might hereafter be issued, and that the statutory formula for determination of the value of its projects necessarily would be unjust and result in an appropriation of its property without adequate compensation. The Respondent concedes the Commission's power to require licensing if the projects are located on navigable waters. It also concedes that if the "net investment" be less than the fair value of a project at the end of the license, this is the price which must be paid to secure the right to maintain a dam on navigable waters. *United States* v. *Appalachian Electric Power Co.*, 311 U.S. 317, 427.

But since we have decided that the Kanawha and the New rivers where the Respondent Glen Ferris and Hawks Nest projects are located are navigable waters of the United States within the meaning of the Act, there is no need to consider the questions which the Respondent has raised in respect to depreciation, amortization, and alleged confiscation on the termination of any license that may be issued. Moreover, in view of the record in this proceeding there is no basis for determining the value or residual value of the Respondent's project at some future time under the provisions of Section 14 of the Act, nor would it be appropriate under the circumstances to pass upon the constitutionality of this section. *Power Authority of the State of New York*, Project 2216, 16 FPC 74, 76; *Davies Warehouse Company* v. *Bowles*, 321 U.S. 144, 152–153.

Permit on the Glen Ferris Project. In 1899 the Secretary of War issued a permit to the Willson Aluminum Company, the Respondent's predecessor in interest, granting permission "to construct a dam on the crest of the Falls of the Great Kanawha River, West Virginia, to be used for storing water for manufacturing purposes," but subject to the condition that the company would at its own expense build and maintain a chute for the passage of logs in case of need. The permit was issued pursuant to the authority of Section 3 of the Rivers and Harbor Act of July 13, 1892, 27 Stat. 88, 119, and was made revocable at will by the Secretary of War.

In its petition for the permit dated November 12, 1898, Willson stated that "There is no present navigation for the dam to obstruct and if the Government

should decide to erect any further locks and dams, the dam which we will erect and the pool that would be above it could be utilized and would not be an obstruction."

In 1917 Wilson's successor, the Electro Metallurgical Company, began replacing the timber crib dam with a concrete dam. At the same time it built a new power house. When knowledge of this construction came to the attention of the United States Engineers at Wheeling, West Virginia, the company was informed that a permit was required, and further work was halted by Electro. On August 29, 1919 Electro requested a permit "to cover the rebuilding with concrete, as shown in the blueprints and tracings, of dam to replace the present timber dam and also the building and installation of two additional generating units to be used as spares and in the generation of current in high water".

Endorsements in the office of the Corps of Engineers indicate what disposition was made of Electro's request for a permit. In the third endorsement, namely from the Chief of Engineers to the District Engineer dated September 27, 1919, it is stated:

> The matter was recently discussed in this office with a representative of the applicant company and it was explained to him that the present policy of the Department was to withhold affirmative approval of *all power development projects, it being deemed undesirable to take such action until Congress has enacted pending and needed legislation on the subject.* He was told, however, that, in the circumstances of this case, the work of reconstructing the dam as proposed would not be interfered with, on the understanding that the Department reserves the right to require such changes in the structure, or in its mode of operation, as interests of the United States may hereafter demand. [Emphasis supplied.]

In the fourth and final endorsement the District Engineer reports to the Chief of Engineers on October 4, 1919 that:

> In view of the explanation made to the applicant company by the office of the Chief of Engineers, this office will take no further action and will make no objection to the company's proceeding with the work as described in its application.

Accordingly, no permit was ever issued by the War Department for the replacement of the wooden dam, the installation of additional generators, or for the present Glen Ferris project works, nor does the Respondent claim that such works were constructed or maintained pursuant to the consent of Congress, either prior to or subsequent to, the enactment of the Federal Water Power Act of June 10, 1920.

The Respondent, however, contends that it has a valid permit issued by the War Department on February 27, 1899, that the withholding of affirmative approval by the Corps of Engineers was pursuant to established policies of the Secretary of War (Chief of Engineers, Circular No. 8) thus excluding any requirement for a further permit covering the concrete structure and enlargement of the power plant, and that by the enactment of the Federal Power Act of June 10, 1920, Congress accorded it full protection and no further permit was needed.

We think this argument is fallacious. The Secretary of War simply sanctioned deferral and the action of the Corps of Engineers was in keeping with this policy. The explanation given by the Corps in the third endorsement for withholding affirmative approval refers to "*all* power development projects * * * until Con-

gress has enacted pending and needed legislation on the subject" *not merely those projects allegedly on non-navigable waters as the Respondent contends.*

The Respondent also relies on a statement of Lt. Colonel Kingman of the Corps of Engineers to support its contention that it possesses a valid permit on its Glen Ferris development. Colonel Kingman's statement is contained in a letter dated December 29, 1932, addressed to the Chairman, Federal Power Commission, and reads in part as follows: "The Electro-Metallurgical Company has been operating a plant at Kanawha Falls near the mouth of New River for number of years under a permit issued February 27, 1899, by the War Department." Colonel Kingman's letter was not concerned with nor was it in response to a specific inquiry relating to a permit on the Glen Ferris plant, and under the circumstances is of no evidential value to establish the issue here in question.

It is manifest that the only permit outstanding on the Glen Ferris development is the one issued by the Secretary of War in 1899 made revocable at will. Certainly it cannot be said that the Respondent's Glen Ferris development today is the same as the one for which a permit was granted in 1899, nor is there any sound reason why a permit issued then should be valid in perpetuity, notwithstanding subsequent modifications in the project. The burden of providing a valid permit covering the replacement of the wooden dam and the improvements since then rests on the licensee. *United States* v. *Denver and Rio Grande R.R. Co.*, 191 U.S. 84, 92; *Rossi* v. *United States*, 289 U.S. 89. The Respondent has failed to prove that it has a license covering its existing project. It can, therefore, claim no exemption under Section 23 of the Act.

Interests of the State of West Virginia. On October 28, 1963, and during the pendency of the hearing the State of West Virginia, through its Attorney General, petitioned the Commission for leave to intervene. On December 10, 1963, the Commission granted leave to intervene conditionally as of November 13, 1963. Thereafter, the Attorney General filed an initial brief, a reply brief, and presented an oral argument before the Examiner.

The Attorney General's briefs in large measure merely buttress the arguments and contentions of the Respondent. In summary the Attorney General contends: (1) that "the New River from Hinton to Kanawha Falls is not navigable in law or in fact," (2) the "hydroelectric projects in question have not, do not now, and will never affect navigability of the Great Kanawha River," and (3) "the Federal Power Commission is without jurisdiction of these projects".

All of these contentions have been dealt with heretofore. It is pertinent to observe, however, that the Attorney General, as well as the Respondent, refer to a number of cases in defining navigability and then endeavor to apply the so-called tests of the cases to the New River. Since all the parties cite the *Daniel Ball*, 10 Wall. 557, 563 (1870), *The Montello*, 20 Wall. 430, 441, *Economy Light and Power Co.* v. *United States*, 256 U.S. 113, *United States* v. *Utah*, 283 U.S. 64, and *United States* v. *Appalachian Power Co.*, 311 U.S. 377 (1940) these cases here may be put aside. The Attorney General for the State also relies upon *United States* v. *Oregon*, 295 U.S. 1, 23, and *United States* v. *Rio Grande Dam and Irrigation Co.*, 174 U.S. 690, but these cases are of no avail as applied to the New river to establish non-navigability. Unlike the New, the lakes claimed to be navigable in the Oregon case lacked water and often were almost dry, and in the Rio Grande case the ordinary flow of water was insufficient for navigation. The case of *Harrison* v. *Fite*, 148 F. 781, 783 which is quoted in *United States* v. *Doughton*, 62 F. 2d 936, 939 and relied on by the Attorney General has been largely overruled *sub silentio* by the Appalachian case and others.

In his brief the Attorney General for West Virginia refers to opinions of officers of the United States Corps of Engineers given some 35 or 40 years ago as to the non-navigability of the New. He quotes General Brown as stating, "* * * it is my opinion that New River is not navigable at any point in its course". In defense of these officers it may be said that they were consistent and that they then envisaged no improvement in the New. General Brown's generalization, however, was rejected by the Supreme Court in the Appalachian case.

Finally, the Attorney General asserts that jurisdiction of the State of West Virginia over the Hinton-Gauley reach of the New River is "supreme under the laws of the State, the Federal Government and the Constitution of the United States," and that "the question is basically whether sovereignty over water power development in the State of West Virginia inheres in the United States or in the State of West Virginia." There is, of course, no dispute as to the jurisdiction of the State of West Virginia as opposed to that of the Federal Power Commission. The State possesses jurisdiction over non-navigable streams within its borders, and although the State issued licenses to the Respondent on its Glen Ferris and Hawks Nest projects, the record fails to disclose any significant interest or steps taken by the State in recent years in respect to the development of water power on the New or the Kanawha rivers. In any event the control of a State is "subject to the acknowledged jurisdiction of the United States under the Constitution in regard to commerce and the navigation of the waters of rivers". *St. Anthony Falls Water Co.* v. *Water Commissioners*, 168 U.S. 349, 366. At this late date there can be no doubt under our Federal system over the sovereignty of navigable waters. The question in issue is one of fact, namely whether the Federal Power Commission has jurisdiction over water power development by reason of the fact that the Respondent's projects are located on navigable waters of the United States, and as heretofore determined we think this question must be answered affirmatively.

FINDINGS AND CONCLUSIONS

Upon consideration of the record, briefs, and arguments of counsel, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) The Respondent, Union Carbide Corporation, is a corporation organized and existing under the laws of the State of New York.

(2) The Respondent, insofar as it is pertinent in this proceeding, is the successor in interest to the Union Carbide and Carbon Corporation, the Electro Metallurgical Company, the New-Kanawha Power Company, and the Willson Aluminum Company.

(3) The Respondent owns, operates, and maintains the Glen Ferris hydroelectric development located at the Kanawha Falls on the Kanawha river in West Virginia about 95.7 miles above its mouth on the Ohio River at Point Pleasant, West Virginia.

(4) The Respondent owns, operates, and maintains the Hawks Nest hydroelectric development located on the New river, West Virginia, the powerhouse being located at about mile 1.5 and the dam at about mile 6.8, or some 98.5 and 103.8 miles, respectively, upstream from Point Pleasant.

(5) The New river rises in North Carolina and flows first in a northeasterly direction, then northwesterly through Virginia and West Virginia for approximately 250 miles until it is joined by the Gauley River at which point it changes its name and is known as the Kanawha River; the Kanawha flows into the Ohio some 97 miles below the mouth of the New and its juncture by the Gauley.

(6) In 1899 the War Department granted a permit to the Willson Aluminum Company for the construction of a timber dam at the Kanawha Falls, but on application by its successor the Electro Metallurgical Company in 1919 to replace the wooden dam with a concrete dam, to build a new powerhouse, to install two additional generators and related facilities, the Department declined to grant a new permit, which installations constitute a part of the present Glen Ferris development and now owned, operated and maintained by the Respondent.

(7) The Respondent does not have a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Federal Power Act for the operation and maintenance of its project works constituting the Glen Ferris development referred to herein in findings (3) and (6).

(8) The Respondent does not have a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Federal Power Act for the operation and maintenance of its project works constituting the Hawks Nest development referred to herein in finding (4).

(9) The existing Glen Ferris hydroelectric development with an installed capacity of 4680 kw, and the Hawks Nest development with an installed capacity of 102,000 kw, are part of a unified system which supplies electric energy for the Respondent's metallurgical operations.

(10) Congress has exercised jurisdiction over the New and the Kanawha rivers by appropriating millions of dollars for use in protecting the watershed of these rivers, building Federal dams for flood control, river improvement, navigation, and other purposes.

(11) The Kanawha river is a navigable river of the United States. By means of the Winfield, Marmet, and London dams constructed on the river in 1937 a minimum depth of 9 feet is provided for navigation extending from the river's mouth upstream for about 90 miles. The present day commerce on the Kanawha amounts to more than 10,000,000 tons annually, much of which is interstate in character. The remaining 7 miles of the Kanawha (including the site of the respondent's Glen Ferris development) is unimproved for modern navigation. This reach of the river, however, was used extensively for the rafting of logs during the last century, is readily susceptible of improvement for commercial navigation and accordingly is a navigable water of the United States.

(12) The New river for some 111 miles (miles 62 to 173) and above the Hinton-Gauley reach has been held to be a navigable water of the United States in, *United States* v. *Appalachian Power Co.*, 311 U.S. 377, 410, 418 (1940). The Hinton-Gauley section of the river (miles 0 to 62), the area in which the Respondent's Hawks Nest development is located, was navigated downstream by means of bateaux by Chief Justice Marshall and his party in 1812 and by the surveyors Moore and Briggs in 1819. This section was used for many years particularly following 1865 for the floating of loose logs to mills along the river and millions of boardfeet of lumber were cut from the logs and shipped in interstate commerce. Pools in this section of the river presently are capable of sustaining pleasure craft navigation, and in addition the entire section is susceptible of improvement for commercial navigation. The New river from its mouth to Hinton is a navigable water of the United States.

(13) The maintenance and operation by the Respondent, the Union Carbide Corporation, of the Glen Ferris and Hawks Nest hydroelectric facilities referred to in findings (3) and (4) above, are capable of affecting and have

affected navigation in the New and Kanawha rivers and the interests of interstate and foreign commerce.

(14) It is appropriate and in the public interest to issue an order to conserve and fully utilize the navigation and water resources of the New-Kanawha river basin occupied by the Respondent, Union Carbide Corporation's project works referred to in findings (3) and (4) above, for the use and benefit of interstate and foreign commerce, for the improvement and utilization of water power development, and for other beneficial public uses, including recreational purposes, in accordance with Section 10(a) and other provisions of the Act.

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) The Union Carbide Corporation shall file an application for and shall obtain a license under the Federal Power Act for the continued operation and maintenance of its projects consisting of the Glen Ferris and Hawks Nest hydroelectric developments referred to in findings (3) and (4) above.

(B) Such application shall be filed in accordance with the Commission's Regulations under the Federal Power Act within 120 days from the date of issuance of this order.

HARRY C. SHRIVER,
Presiding Examiner.

APPENDIX B

*Table of river locations**

[Union Carbide Corporation Project No. 1856]

Location	River Mile	Remarks
Ohio River		
Huntington U.S.G.S. Gage	—46.0	
Gallipolis Lock & Dam	—13.6	
Kanawha River		
Kanawha River Mouth	0.0	Exh. 1 (Location Map), Exh. 5 (Marshall Survey) Exh. 6 (Moore and Briggs), Exh. 7-A (Map, New & Greenbrier), Exh. 8 (Lorraine Rpt.), Exh. 9 (Lorraine Map).

UNIFORM SYSTEMS OF ACCOUNTS FOR PUBLIC UTILITIES, LICENSEES AND NATURAL GAS PIPELINE COMPANIES AND ANNUAL REPORT FORMS FPC NOS. 1, 1-F, 2, 2-A—PRESCRIPTION OF FLOW-THROUGH ACCOUNTING FOR LIBERALIZED DEPRECIATION TAX SAVINGS AND DISPOSITION OF ACCUMULATED DEFERRED TAX BALANCES, DOCKET NO. R-264

ORDER DENYING MOTIONS

(Issued September 15, 1964)*

Notice of proposed rulemaking herein was issued on July 7, 1964, and published in the Federal Register July 18, 1964 (29 F.R. 9723). The notice invited the submittal of data, views and comments by August 26, 1964. The Secretary, on August 7, 1964, issued a notice of extension of time in which to file comments to October 1, 1964 (29 F.R. 11653, August 14, 1964).

The following motions or other pleadings have been filed by persons interested in this proceeding:

Motion to Vacate and Terminate Proceedings or, In the Alternative, for Extension of Time—Filed August 3, 1964, by Independent Natural Gas Association of America (INGAA) (corrected copy filed August 4);

---

*Published in the Federal Register on September 19, 1964 (29 F.R. 13119).

Joinder of Southern Natural Gas Co. in motion of INGAA—Filed August 3, 1964;

Joinder of Texas Gas Transmission Corp. in motion of INGAA—Filed August 12, 1964;

Supplement to Motion—Filed August 11, 1964, by INGAA;

Adoption of and Joinder in Motion, as supplemented, of INGAA—Filed August 13, 1964, by Hope Natural Gas Company, et al.;

Motion to Extend Time for Filing Comments—Filed August 14, 1964, by Atlantic Seaboard Corp., *et al.*

Movants allege that the proposed rulemaking is illegal, and that they are unable to submit data, views and comments to support this allegation within the period allowed. As an alternative to moving that the Commission should terminate these proceedings they request an extension of time in which to file comments to (a) a date subsequent to the completion of judicial review in the *Alabama-Tennessee* case or (b) thirty days after the Commission has acted on such motion or September 30, 1964, if that date is later.

In view of the Secretary's action extending the time for filing comments to October 1, 1964, an action which we here confirm, we shall not further discuss the pleadings insofar as they seek additional time to file comments.

The INGAA motion argues that the amendments here proposed "are required by statute to be made on the record after opportunity for an agency hearing" and that, therefore, sections 7 and 8 of the Administrative Procedure Act apply in place of section 4 thereof, pursuant to which we are proceeding in this matter. INGAA's contention, however, is based upon a single sentence of section 8(a) of the Natural Gas Act, quoted out of context. That sentence—"The Commission, *after notice and opportunity for hearing*, may determine by order the accounts in which particular outlays or receipts shall be entered, charged, or credited." (Emphasis supplied)—has no applicability to the prescription or amendment of a system of accounts with which the first two sentences in the section are concerned and pursuant to which our proposals are being made. Those sentences require natural gas companies to "keep * * * such accounts * * * as the Commission may by rules and regulations prescribe" and authorize the Commission to "prescribe a system of accounts." Had Congress intended to require notice and opportunity for hearing with respect to those "general" sentences, it would have so provided, as it saw fit to do with respect to the "particular" matters with which the quoted sentence is concerned. Since the provisions of Section 301(a) of the Federal Power Act are the same as those in 8(a) of the Natural Gas Act, we reaffirm the statement in paragraph 10 of the notice herein that no hearing is "required by the accounting and reporting provisions of the Federal Power and Natural Gas Acts."

The fact that *Alabama-Tennessee* is now under judicial review does not, in our opinion, constitute a valid reason for delaying the filing of comments on the rulemaking proceeding until that case is decided. Contentions relative to the advisability of issuing any accounting rule while the substantive order on which it is based is under court review may be made by the movants herein in their comments. Needless to say, those contentions will be fully considered by the Commission before it issued any order with respect to the proposals being considered in the instant proceeding.

The Commission orders:

The several motions, referred to above, to vacate and terminate this proceeding or, in the alternative, to extend the time for submitting comments to a date subsequent to the completion of judicial review in *Alabama-Tennessee* are hereby denied.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EASTERN MAINE ELECTRIC COOPERATIVE, INC. AND ST. CROIX PAPER COMPANY, DOCKET NO. E-6853

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued September 16, 1964)

Eastern Maine Electric Cooperative, Inc. (Applicant), incorporated under the laws of the State of Maine, with its principal place of business at Calais, Maine, on June 26, 1964, filed an application for a supplemental order pursuant to Section 202(a) of the Federal Power Act, authorizing an increase in the amounts of electric energy which Applicant is presently authorized to transmit from the United States to Canada. Applicant was joined in its application by the St. Croix Paper Company, a Maine corporation doing business in Maine. The St. Croix Paper Company owns and operates a 28,000 kw steam electric generating plant and an 11,400 kw hydroelectric plant at Woodland, Maine pursuant to an agreement with Eastern Maine Electric Cooperative, Inc., dated May 22, 1964, will provide part of the electric energy which is to be exported to Canada.

By Commission order issued March 9, 1959, in the above docket (21 FPC 338), Applicant was authorized to transmit 200,000 kwh of electric energy annually from the United States to Canada at a maximum rate of transmission of 1,200 kw. Applicants now seek authority to export a maximum of 75,000,000 kwh per year at a rate not in excess of 15,000 kw.

The energy proposed to be exported will be sold by the Cooperative to the New Brunswick Electric Power Commission, a commission appointed under the laws of the province of New Brunswick, Canada, with its principal place of business at Fredericton, New Brunswick, in accordance with the terms and at the rate set forth in a Memorandum of Agreement between New Brunswick Commission and the Cooperative dated June 1, 1962 incorporated by reference as an exhibit to the application.[1] The source of the energy proposed to be transmitted to Canada will be the Cooperative's diesel plant located at Calais and the steam and hydroelectric generating plants of the St. Croix Paper Company at Woodland, Maine. Such energy will be delivered by the Cooperative over a 69 kv transmission line[2] belonging to Applicant, to the New Brunswick Commission at the international boundary near Calais, Maine. The application represents that the energy will be exported by the Cooperative during emergencies occuring on the electric utility system operated by the New Brunswick Commission and during times surplus electric energy is available on the Cooperative system.

Written notice of the application has been given to the Public Utilities Commission of Maine and to the Governor of that State. Notice of the filing of the application has also been given by publication in the Federal Register on July 16, 1964 (29 F.R. 9226), stating that any person desiring to be heard or to make any protest with reference to the application should on or before August 3, 1964, file with the Federal Power Commission, Washington, D.C., 20426 a petition or protest in accordance with the Commission's Rules of Practice and Procedure. No petition or protest or request to be heard in opposition to the granting of the application has been received.

---

[1] The Memorandum of Agreement also provides for the sale of emergency and surplus energy by New Brunswick Commission to Cooperative.

[2] Facilities covered by permit issued March 9, 1959 in Docket No. E-6854 (21 FPC 338).

The Commission finds:

The transmission of electric energy from the United States to Canada, as limited herein and as hereinafter authorized, will not impair the sufficiency of electric supply within the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

The Commission orders:

(A) Applicants are hereby authorized to transmit electric energy from the United States to Canada in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which Applicants are hereby authorized to transmit from the United States to Canada shall be in an amount not in excess of 75,000,000 kwh per year at a rate not to exceed 15,000 kw over facilities covered by the aforementioned permit signed by the Chairman of the Federal Power Commission on September 5, 1959, Docket No. E-6854.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential Permit referred to in paragraph (B) above.

(D) Applicant shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) Applicant shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted between the United States and Canada; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish to the Commission with respect to such transmission of energy, on or before February 15 of each year, reports in triplicate showing separately the kilowatt-hours received or delivered at each of the points herein authorized, the maximum kilowatts of transmission in either direction and the consideration therefor during each month of the preceding calendar year.

(F) This authorization to transmit electric energy from the United States to Canada shall not be transferable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in such State or State regulatory commission, over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) The authorization herein granted shall supersede that heretofore granted by Commission order issued March 9, 1959, referred to above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-276

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 16, 1964)

On May 15, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-276 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of increased volumes of natural gas to the City of Lordsburg, New Mexico, for resale to Community Public Service Company (Public Service) for use by the latter as fuel in its Lordsburg electric generating plant, all as more fully set forth in the application.

Applicant proposes to construct and operate 2.3 miles of 4.5-inch pipeline extending from Applicant's 26 and 30-inch California line in Hidalgo County, New Mexico, to Lordsburg and a dual 6⅝-inch O.D. orifice type measuring and regulating station.

Applicant presently sells gas to Lordsburg for resale and distribution in said community and for resale to Public Service for use as fuel at the Lordsburg generating plant. Applicant states that Public Service is installing additional generating facilities at the Lordsburg Plant and will require additional volumes of natural gas for such new facilities.

The total estimated third year peak day and annual requirements for Lordsburg and the power plant are 10,903 Mcf and 1,917,237 Mcf, respectively.

The estimated total cost of the proposed facilities is $53,300, which cost will be financed out of current working funds, supplemented as necessary by short-term bank loans.

By letter, dated July 16, 1964, applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 15, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Total deliveries of natural gas by Applicant for resale to Public Service should not exceed 9500 Mcf per day at a pressure not to exceed 210 psig.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) Total deliveries of natural gas by Applicant for resale to Public Service shall not exceed 9500 Mcf per day at a pressure not to exceed 210 psig.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. RP64-16

ORDER MODIFYING ORDER CONDITIONALLY APPROVING RATE SETTLEMENT

(Issued September 16, 1964)

The Commission, on August 21, 1964, 32 FPC 647, issued its order conditionally approving rate settlement in this proceeding. That order provided, among other things, for the flow-through of refunds and rate reductions which Kansas-Nebraska might receive from its suppliers.

On August 27, 1964, Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska) filed a motion requesting the Commission to amend and clarify the refund and rate reduction conditions set out in paragraphs (D) and (E) of the aforementioned order. In particular, the motion states that: (1) The order is too general and unlimited in that it does not list the specific supplier pending

dockets which may give rise to the refunds and rate reductions Kansas-Nebraska is obligated to pass through to its customers; (2) if Kansas-Nebraska suppliers should increase their rates to it after August 17, 1964,[1] and these increases were later disallowed, in whole or in part, resulting in refunds, or rate reductions, it is inequitable to require Kansas-Nebraska to pass on such refunds or rate reductions which would represent no more than reimbursement of costs which Kansas-Nebraska had absorbed; and (3) it would be particularly inequitable to require pass-through of refunds and rate reductions arising from supplier rate increases after August 17, 1964, when no provision is made for offsetting against such refunds or reductions increases in the cost of purchased gas which may occur in the future.

It was not the intent of the order issued August 21, 1964 to impose refund and rate reduction obligations upon Kansas-Nebraska differing from those generally provided in recent rate settlement agreements which we have approved. Accordingly, to eliminate any claimed ambiguity in that order, we are modifying paragraphs (D) and (E) as hereinafter provided. However, with respect to the refunds which Kansas-Nebraska is not hereby specifically obligated to pass through, this modification shall not be construed as a limitation of the policy and intent set forth in our order issued July 8, 1964 in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49.

The Commission orders:

(A) Paragraphs (D) and (E) of the order issued August 21, 1964 in this proceeding hereby are amended to read as follows:

(D) The acceptance of the Stipulation is conditioned to provide that Kansas-Nebraska, subject to the approval of the Commission, shall pass on to its jurisdictional customers the proportionate share of any refunds it receives from its suppliers as a result of final non-appealable orders of the Commission in proceedings affecting supplier rates upon which Kansas-Nebraska's purchased gas costs were computed in this docket applicable to gas delivered to it subsequent to August 17, 1964. It shall pass such refunds on to its customers within 30 days after they have accumulated in the manner prescribed above. This provision shall not be deemed to limit any authority which the Commission may otherwise exercise with respect to any other refunds received by Kansas-Nebraska or to prejudice any position which Kansas-Nebraska or any interested party may take in respect of such refunds.

(E) The acceptance of the Stipulation is further conditioned to provide that Kansas-Nebraska, subject to the approval of the Commission, shall make such reductions in its rates as are made to it by its suppliers as a result of final non-appealable orders of the Commission in proceedings affecting supplier rates upon which Kansas-Nebraska's purchased costs were computed in this docket. It shall, within 30 days of such rate reductions having accumulated in the manner prescribed above, make appropriate tariff filings reflecting these reductions with this Commission, and serve a copy thereof upon each of its jurisdictional customers and interested State commissions.

(B) In all other respects, the Commission order issued August 21, 1964 shall remain in full force and effect.

---

[1] The effective date of the settlement rates approved by the Commission in its order issued August 21, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP61-204

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 16, 1964)

On January 26, 1961, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP61-204 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 1.35 miles of 4-inch pipeline and one meter station in the South Rayne Field, Acadia Parish, Louisiana, in order to transport natural gas, all as more fully set forth in the application.

The subject facilities are to be used to transport, for the account of Hope Natural Gas Company (Hope), gas purchased by Hope from Texas Gas Exploration Corporation (Operator), *et al.*,* in the South Rayne Field. The transportation for the account of Hope will be rendered pursuant to certificate authorization of August 10, 1959, 22 FPC 378, in Docket No. G-17335, *et al.*

The estimated cost of the proposed facilities is $27,167, which cost is to be financed from cash on hand.

By letter, dated March 17, 1961, Applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 15, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G-859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

*Such sale to Hope was authorized by Commission order issued December 18, 1963, in Docket No. CI61-1125, 30 FPC 1548.

and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

CHATTAHOOCHEE VALLEY GAS DISTRICT, DOCKET NO. CP63–163

ORDER ADOPTING PRESIDING EXAMINER'S INITIAL DECISION

(Issued September 17, 1964)*

Syllabus

1. Under Section 7(a), no order may issue requiring pipeline to serve prospective distributor if to do so would impair pipeline's capability of serving present customers. P. 815.
2. Record shows economic feasibility of new project to be quite possible or probable—on basis, among other things, of estimated debt service coverage of 1.529, satisfying rule of 1.5 ratio. P. 817.
3. In proceeding arising under Section 7(a) of the Natural Gas Act, Commission *orders* pipeline to connect its facilities with those proposed by applicant and sell natural gas for new distribution system, conditioned on collection of cash deposit for each customer predicted for first year.

J. Robert Fleenor for Chattahoochee Valley Gas District.
Hugh J. Morgan, Jr. for Southern Natural Gas Company.
Richard C. Steffey for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

On August 6, 1964, the presiding examiner in this Section 7(a) proceeding, issued an initial decision, subject to review by the Commission, directing Southern Natural Gas Company (Southern) to connect its system with the proposed facilities of the Chattahoochee Valley Gas District (Chattahoochee), the applicant herein, and to sell and deliver to Chattahoochee a supply of natural gas, up to 2,658 Mcf per day, for distribution at retail in six Alabama towns[1] and to diverse customers along its 81-mile transmission pipeline. The Examiner imposed the following conditions:

(1) The order is effective upon completion of the pertinent facilities of Southern as covered in its application in Docket No. CP64–259.

(2) To assure the reality of the market claimed, Chattahoochee shall collect a five dollar deposit, as referred to in its proposed tariff, from each of at least

---

* Initial decision appears on p. 812.

[1] Ariton, Clayton, Clio, Hurtsboro, Louisville and Midway, Alabama.

1,608 proposed customers, and furnish to the Commission and to Southern its written certification of the amounts so collected, all such collections to be held in escrow until Chattahoochee begins gas service.

No exceptions have been filed to the presiding examiner's initial decision by any party to these proceedings. The examiner's decision contains a careful review of the facts and a sound discussion of the applicable legal principles.

The Commission finds:

Upon consideration of the evidence of record in these proceedings, the briefs filed and the examiner's decision, we are of the opinion that the examiner's decision should be adopted as our own.

The Commission orders:

The initial decision of the presiding examiner issued herein on August 6, 1964, is hereby adopted and such decision shall become effective as the decision of the Commission as of the date of issuance of this order.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON AN APPLICATION FOR AN ORDER UNDER SECTION 7(a) OF THE NATURAL GAS ACT

(Issued August 6, 1964)

ELLIS, *Presiding Examiner:*

I. Nature of the Case

The Chattahoochee Valley Gas District, which is a public corporation comprised of a group of towns in Southeast Alabama, has petitioned the Federal Power Commission for an order under Section 7(a) of the Natural Gas Act, calling upon the Southern Natural Gas Company to sell and deliver to the Valley District a supply of natural gas, up to 2,658 Mcf per day, for distribution at retail in six Alabama towns and to diverse customers along its 81-mile transmission pipeline. This is an entirely new project, to be built at a cost of $1,750,000, and the only issue of reality and substance is the economic feasibility of the program. Because of its doubts upon this score, the Staff of the Commission has recommended denial of the petition.

II. Procedural History

The present petition, which is the third version of the District's application, was filed in August and November, 1963. A three-day hearing took place in April, 1964, the Commission's brief was filed May 15, and the applicant's brief in reply on June 26.

The original application, filed in December, 1962, was consolidated with a certificate case of the Southern Natural Gas Company, Docket CP63–26, but the project as then planned was somewhat more extensive. Because it was involved with certain other applications not yet filed, that filing was severed from the Southern Natural proceeding by the Commission's order dated March 4, 1963. The applications here considered and acted upon comprise the original filing of December 10, 1962 (Item A by reference), as amended by the application filed August 30, 1963 (Item B), and supplemented on November 6, 1963 (Item C), all in Docket CP63–163. The 1963 filing (Item B) was further amended by Exhibit 1 admitted at the hearing, with the purpose of substituting new pages numbered 3, 83, 84, 85, 86, 87 and 89. Thus the entire application consists of Item A, as amended by Item B and supplemented by Item C and Exhibit 1.

III. Nature of the Project Described

In southeastern Alabama a total of 23 or 24 towns and cities are served natural gas by the Southeast Alabama Gas District under a certificate issued in 12 FPC 550 (1953) and 14 FPC 855 (1955). With two north and south lines about 60 or 65 miles apart, cross-connected at their southern end, Southeast District's service runs to the important cities of Dothan, Troy and Eufaula, as well as quite a number of smaller communities. But most of the area between the two north and south lines appears not now to have natural gas service, hence the present project was organized to bring gas to six communities located on a more or less north-south line between the two lines of the Southeast District. The new organization is called the Chattahoochee Valley Gas District, a quasi-municipal corporation organized under Alabama law by a number of Alabama towns and cities (not quite the same as the six communities now planned to be served). For its gas supply, a connection with the main line of the Southern Natural Gas Company is planned at a point just below Opelika. The transmission line is to extend generally southward for 81 miles, and to be of a modest size, from 4½ to 2⅞ inches in diameter. The Valley Gas District plans to construct the transmission line and also a distribution system in each of the following communities in Alabama: Ariton, Clayton, Clio, Hurtsboro, Louisville and Midway.

The total capitalization required is $1,725,000, but only 72 percent of this amount will be used for actual construction, the remainder ($490,000) going to meet the expenses of the fees of the engineers and others, capitalized interest for two years, bond discount, rights-of-way, equipment and supplies. As of now, the corporation is without funds or organization, since it is planned to raise the entire amount required by the issue of revenue bonds, which on a tax-free basis will be issued to yield about five percent to the investor.

The market which is counted upon to provide the revenues to amortize the bond issue comes to 212,500 Mcf in the third year, with 2,658 required for the peak day. One-fourth of the annual amount is for the service of a single commercial or industrial enterprise under special contract, another fourth is for small commercial buyers (nearly all for space heating), and the remainder is expected to be sold to 1,703 homes out of a total of 1,893 prospective or potential domestic customers in the several areas concerned. That means it is contem-

plated by the end of the third year to attach and sell gas to 90 percent of all the potential customers known to be in the service area.

The total population to be served in the five towns is listed as 5,469 (Exhibit 2), plus an undeterminable number along the transmission line, where 313 customers are counted on out of a potential of 348. The gas supply will be purchased under Southern Natural's G–2 rate schedule, which is a flat rate of 39.8 cents per Mcf subject to Btu adjustment. The contemplated resale rate calls for a dollar and a half minimum per month for the first 300 cubic feet, plus a graduated charge ranging from $1.50 for the first Mcf down to 85 cents for the quantities over 100 Mcf in any month. Automatic escalation is provided for to meet increases in the existing wholesale rates, but nothing is said about decreases in the event of a reduction in the wholesale cost of gas. It is significant that the rate schedules are not subject to state supervision by any public service commission or otherwise, short, or course, of legislative action. Since the District's contemplated sales are at retail and not for resale, they are not subject to the jurisdiction of the Federal Power Commission. Upon the basis of these figures, including number of customers and volumes sold, the District computes that their net income available for debt service is 1.529 times the annual requirement, on the basis of its third year cutoff.

IV. The Issues

The only issue of consequence is whether the project is economically feasible, as to which the Staff are quite unconvinced. First, however, there arise a number of preliminary issues, quite out of proportion to the scope of the case but which will require only brief treatment.

A. Preliminary issues.

(1) Staff's good faith and objectivity.

At the hearing, Valley District attacked the good faith of the Staff, who had presented their own figures to suggest a much lower rate of customer connection. The applicant's counsel said:

> I just wonder if Staff is making a bona fide effort to get the facts in this case. It looks like to me they are delaying and possibly making this an attempt to sabotage this plan to get gas down here in South Alabama.

Likewise in their brief, the Valley District says:

> The fact that *Staff* now asserts such a position raises a question as to whether Staff's primary aim in this docket is not merely the denial of this application rather than an objective and diligent search for all the relevant facts in the public interest.

Speaking of the Staff's use of certain figures, the same brief adverts to the "hypocrisy of the Staff's conclusion." (P. 22.) Again, at page 33, their brief decries the Staff's "zeal to defeat this application" and "the intentionally or neglectfully misleading manner in which Staff has presented this application." All of which, it is said, "casts doubt on the real aim of Staff's efforts in this docket."

There is not the slightest basis for these opprobriums, nor a scintilla of evidence to support this condemnation of the Staff's efforts as improper, impartial or unprofessional, and certainly no ground for suggesting their efforts were ill-motivated or of ulterior design. Under the authority of FPC Regulations, paragraph 1.15(f), all of these statements are excised and rejected, but without prejudice otherwise to the fair, indeed sympathetic, consideration of Valley District's petition.

(2) *Southern Natural's available capacity.*

Under the language of Section 7(a), no order may be issued requiring the pipeline to serve Valley District if to do so would impair the line's capability of serving its present customers. The Staff brief recommends denial of the petition on this ground also, at least as things now stand.

But the facts on this issue were settled and stipulated at the hearing. At the opening, Southern Natural did announce they are sold out, at least at present. On the next day the same counsel referred to a new expansion application being filed currently, which is expected to be approved and completed shortly, with ample provision for the Valley District's needs. Southern Natural completed their statement, saying (T. 174):

> * * * We do propose to install facilities which will permit us to deliver Chattahoochee's requirements during the 1964–1965 winter. As a result of Southern's ability to modify this certificate application so as to cover Chattahoochee's requirements, we can now agree to supply Chattahoochee's requirements during the 1964–1965 winter, provided Southern receives a certificate of public convenience and necessity in the aforementioned proceeding, and provided we receive the certificate in time to install facilities before Chattahoochee requires gas.
>
> Mr. Examiner, I have discussed this arrangement with counsel for Chattahoochee Valley and counsel for the Staff, and it is my belief and understanding that this is agreeable to everybody, and that the capacity issue which has been raised is moot and no longer an issue in this case.
>
> PRESIDING EXAMINER: So say you all?
>
> Mr. FLEENOR: The applicant agrees.
>
> Mr. STEFFEY: The Staff agrees, Mr. Examiner.

Relying on this form of stipulation as to the facts, the applicant was justified at this point in resting their case as to capacity. FPC Regs., paragraph 1.25.[1]

Even if there were no finality to this supposed stipulation of facts, there still could be made applicable the decision in Panhandle, G–2306, 28 FPC 522, 528 (a pipeline of about the same size as Southern Natural), where the Commission authorized a new load of 25,000 Mcf (10 times as much as here), relying largely on the diversity factor between the total contract demands of the pipeline's customers and the sum of their actual needs on any given peak day.

Anyway, the capacity issue is moot. Southern Natural's new expansion application is *in processu* (Docket CP64–259), and all hands agree it will take care of Valley District's needs. The order herewith is in contemplation of the higher capacity there provided for.

(3) *The expert testimony.*

Decrying the Staff's testing of the engineering predictions as to customer connections and sales by the method of comparing the sales records achieved

---

[1] Both Southern Natural and the Staff assert that in view of the Commission's order in *Lynchburg Gas Company*, 23 FPC 301 (or at least the dictum therein), Valley District has the juridical burden of proof that Southern Natural's capacity—known to be over a million and a half Mcf per day (Re *Southern Natural*, April 6, 1964, CP63–26, 31 FPC 789)—includes this margin of just 2,658 to serve the modest needs of the Valley District. Whatever might be the rule for a major company like Lynchburg, there is something incongruous and undiscerning or unrealistic in suggesting any such outrageous evidentiary burden as applied to this tiny, new-formed quasi-municipality that has no bank account nor a single person in its employ, nor any background of experience and operation. Especially so since it has no resources for enlisting a body of lawyers and technicians to descend upon Birmingham and ferret out the figures on the capacity of this large and important pipeline. Surely the Commission Staff, with files built up in dozens of dockets on Southern Natural, does not need, or should not need, the applicant's help in this regard.

in actual experience in other towns in the general area—which may or may not be 100 percent comparable—the applicant appears to demand that the Commission accept the statistical projections and predictions made by the engineer on the basis of his evident and admitted expertise, saying that Staff's use of comparable figures from apparently comparable towns might make it possible to dispense with the need for an engineer, and (their Brief adds) "Perhaps we can also dispense with the Commission."

The engineering predictions are of course the principal point of reliance, but they at best are speculations and predictions, they have been subject to question in the past (*Panhandle*, 15 FPC 46, 70) and have resulted in difficulties when over-relied upon. The Commission at times has sanctioned the method of comparing the results in other towns,[2] and accordingly the evidence on that score is required to be considered. In any event, it is settled that the engineering report, although entitled to great respect and necessarily the subject of serious dependence, is not automatically to be regarded as necessarily endorsed or approved.[3]

(4) *Cross-Examination was not denied.*

The Valley District appears to complain at page 8 that it was denied the opportunity adequately to cross-examine the Staff witness because he was called to the stand 30 minutes before the hearing was scheduled to be concluded. As the same brief shows at page 25, that witness merely compiled certain published figures from Brown's Directory (and similar public sources) on the actual sales experience reported for 23 nearby towns served by the Southeast Alabama Gas District, all as compiled in Exhibit 2 by the Staff. The only conclusion stated by the witness (T. 332–3) is that the population per meter for the Southeast Alabama Gas District divides out at 5.3 while that claimed for the Valley Gas District is 3.8, and that this is "some indication" of the economic conditions in the area and of the experience that may be found in attaching customers in the proposed new district.

It is patent that cross-examination in its true sense was not wanted at all since there was and is no suggestion that the witness failed to recite correctly the figures he gave from the sources cited, and this was the only true extent of his testimony. What was wanted instead was to bring out that the witness did not attempt to testify that the 23 nearby towns are necessarily comparable to the new ones proposed to be served, and this non-testimony is amply demonstrated at page 25 of the applicant's brief. Further, it was sought to show from an accounting report that some other figures about the Southeast Alabama District are available, so those figures were copied in the record at page 342, none of them varying perceptibly from the figures already given.

In any event, the applicant did cross-examine the witness, see page 339, and declined the express offer to reassemble the hearing two hours later for the purpose of continuing it (*Id.*). When this cross-examination made it clear that the witness did not claim to have personal knowledge as to the comparability of the two groups of towns, the applicant's attorney announced, "I am satisfied with that" (page 340), while their financial witness said, "We are will-

---

[2] See 15 FPC 118, 120, 128; 15 FPC 1421, 1428; 27 FPC 967, 973–975; 28 FPC 41, 48–49; (*American Louisiana Pipe Line Company*, Opinion No. 402, September 17, 1963, 30 FPC 698 at 709, 710, 712 and 716), though the method was questioned in another case (*Town of Poseyville, Indiana*, CP63–224, order issued September 6, 1963, 30 FPC 663.)

[3] "Experts' judgments, however, would not bind the Commission. Their testimony would be in the nature of argument or opinion, and the weight to be given it would depend upon the Commission's estimate of the reasonableness of their conclusions and the force of their reasoning." *Market St. Ry. v. R.R. Comm.* (1945) 324 U.S. 548, 560. See 28 FPC 916, 926; and compare 17 FPC 333, 356 with 28 FPC 979, 982.

ing to read those figures and then we will call it a day." (T. 336) Those are the figures that were read into the record; and, as shown at T. 340, there was no response to the Examiner's final question: "Is there any other questioning to come up in this case?" Upon this stark evidence of the record, the complaint about cross-examination simply is not understood.

B. Feasibility.

The only issue of reality and substance appears in the Staff's recommendation against the requested order in the view that the project does not give promise of economic feasibility since the applicant's market figures are based upon the implausible premise that 90 percent of the potential customers will be attached and will be buying gas service by the end of the third year.

The general language of Section 7(a) of the Natural Gas Act, "Whenever the Commission * * * finds such action necessary or desirable in the public interest, it may by order direct a natural-gas company * * *" has been interpreted to require that the issues to be considered include whether the proposed project can be financed and whether the project is economically feasible (15 FPC 1421, 1425, 1427–29). This does not require a formal finding by the Commission of economic feasibility; rather, it is enough that "there is a strong probability of applicant's project being an economic success." (20 FPC 213, 216) In the case of a municipality, feasibility is measured or determined by showing that the net revenues will equal the annual debt service or sinking fund requirements plus a 50 percent margin of safety, which is normally expressed as the rule of the 1.5 ratio (15 FPC 46, 70; 21 FPC 190, 196).

The difficulty is that the net revenue figure in every case is most speculative and uncertain because it is a direct function of the number of customers predicted to be attached three or four years ahead (the other two factors, rates and quantity per customer, are relatively specific and certain). More often than not, the market predictions of the engineering report are accepted without question or at least without discussion (24 FPC 177; 29 FPC 754; order of December 12, 1963 in Docket CP64–57). In a very few cases the customer predictions have been examined into and some corroboration required, such as a customer canvass or a showing of other circumstances (21 FPC 552, 559, 567, revised at 22 FPC 566; 17 FPC 118; 29 FPC 297). With that background, and in view of the question raised, we turn to the case here made.

(*1*) *The Valley District's case.*

To design their system and prepare their report, the Valley District employed the firm of Goodwin Engineers, Inc., of Birmingham, the same firm and the same engineer, Mr. Stark Perry, whose report was the subject of a similar case, Re *Sylvester, Georgia*, 25 FPC 278, 281 (1961), where it was noted that the firm is an old one which has designed gas distributing systems for 20 cities and towns in the southeast. It was testified that the present report was prepared upon the same basis as that for Sylvester, and that system, after a year and a half of operation, has actually achieved sales very close to what was estimated in the Perry report in that case (3T255).

In the case of Valley District, the engineering prediction that the annual markets will total 212,500 Mcf (at a maximum day of 2,658), which results in the claimed debt service ratio of 1.529, is derived from the following data: The residential market, as actually counted during the course of two or three surveys, comes to 1,893, which, along with others, makes a total market potential of 2,297 prospective customers. Nearly half of them now heat with LP gas and about 2% with fuel oil. The gas consumption for heating the average house is figured at 23.28 cu. ft. per degree day deficiency, a quite normal factor, except that for Class "B" residences (which average somewhat smaller in size) the fig

ure used is a very modest 16.93 cu. ft. (derived from Item B, Exhibit I). Since nearly half the total sales are classed as residential, and 85% of that amount is for space heating, the really significant question is the verity of the prediction that out of the 1,893 residences in the service area, 1,325 or 70% will be attached as paying space heating customers by the end of the first year of operation, and 1,703 or 90% by the end of the third year of operation. No great controversy developed as to the contemplated sales in the commercial class and the one industrial sale which has been committed, but Staff has raised a very serious question as to the claim that 90% of the houses will be heated with natural gas. The figure is significant because the revenues from residential sales account for somewhat more than half of the total income relied upon. (Item B, Exhibit M).

(2) *Doubts raised by the Staff.*

The Staff brief points to a number of circumstances which cast serious doubt on the validity of the prediction that 90% of the homes along the line and in the towns will be heated with gas by the end of the third year. Conceding that the 43% of the homes which now use LP gas (if not also the 2% now using fuel oil) will in practically all cases be so converted because the cost comparison is favorable, the real question pertains to the others who are believed to use coal or wood at presumably less expense. It was remarked that there has been no customer canvass (for what value, if any, that might be in predicting the attachment rate three or four years later). Next, the Staff points out that Mr. Perry's estimate for Sylvester, Georgia in the case cited above was only 69% at the end of the third year, not 90%. When witness Perry referred to the historical records of other systems as the basis for his 90% prediction he was asked to name the gas systems which had achieved that saturation rate and in apparent response he referred to four cities in Georgia and one nearby town in Alabama, but the actual number of customers, including residential and small commercial as a group, for those localities comes to a little less than 50% at the end of the third year and 59% by the seventh or eighth years. (Exhibit 3, 3T314).[4]

In further contrast, the Staff points to 23 towns in this immediate area which have been served for seven years by the *Southeast Alabama Gas District* (12 FPC 550), whose percentage of actual customers to total number of houses works out at 61%, according to data derived from Brown's Directory, Exhibit 2. Turning to another formula, the Staff computes that Valley District expects to attach one meter or customer for each 3.8[5] persons in the total population for the area to be served, whereas the Southeast Alabama District reportedly serves one customer only for each 5.3 persons in their area, citing the same source.

The applicant does not seem to have any better figures to offer with respect to the Southeast Alabama Gas District, but the reservation must be noted that the number of customers used comes from private, unofficial and unverified reports to Brown's Directory, the population used comes from Rand McNally (which may or may not refer to exactly the same area), and the number of houses comes from

---

[4] About this question and answer there is claimed to be some misunderstanding, since the applicant's brief at page 24 says that the list of 90% towns was not actually asked for or directed to be copied into the transcript. However, this seems to be belied by the plain question and answers furnished at pages 310–316 and Mr Perry's figures which the Examiner asked to be incorporated into the record as Exhibit 3. Their brief now lists, apparently *dehors* the record, four such towns whose actual attachment rates are given as 94% to 100%. One of them, the perhaps well-named Hokes Bluff, is listed as somehow having achieved a record of attaching 105% of the potential available for connection. But since these figures are not in the record, they cannot be considered.

[5] For comparison, the editor of *Public Utilities Fortnightly* (Vol. 73, p. 8) speaks of the "reliable old rule-o-thumb basis of 3.2 people for every household." P. 15.

the U.S. Census of Housing, which may also have significant differences in its frame of reference. Thus, these figures, while plainly significant, might be misleading if taken alone.

Transplanting the 5.3 population-meter ratio from the 23 surrounding towns in the immediate area to the population figures for the areas to be served by Valley District, the Staff arrives at a prediction of 1,216 customers after three years, which is only 53% of the potential instead of the 90% which the Perry report anticipates. The result of this reassessment by the Staff is to reduce the net revenues available for debt service by about one third, so that the ratio of revenues to debt payments becomes only .984. This, of course, without more would mean that the project would not be economically feasible.

(3) *The counter case.*

However, there are a number of items of rebuttal and counter-circumstance which suggest that the population-meter ratio should not be literally applied and that the applicant's prediction of 90% customer attachment is at least a conceivable one, perhaps a quite possible one. In the first place, the population ratio test used in some prior cases [6] seems not necessarily now to have the Commission's sanction since in Opinion No. 435 of July 17, 1964, 32 FPC 158, in *East Tennessee*, the Commission accepted as "reasonable" the distributor's own estimate of its expected sales, including residential, and those estimates come to 194% of an estimate based on the population-meter ratio. Also, the sources used may lack exactitude since (a) the reports to Brown's Directory may use quite diverse bases for the number of heating customers (for example, where a block of apartments are heated through a single meter), and (b) the Rand-McNally population reports may or may not count only those persons living within the city limits while the gas companies' service area may or may not extend considerably beyond that point. This is not to doubt that Staff made the best use of all the tools at its command, but does suggest that a better reporting system might be sought upon the basis of which proven experience reports of nearby and similar areas might be the best test available upon which to judge the predictions made in applications made for new service.

In the second place, the applicant's program includes a perhaps unusual feature which may greatly promote sales and customer connections. The Valley District plans to pay all the interior piping costs for each domestic heating customer, so that a prospect's only capital cost to be faced is the charge for converting present non-gas heating equipment or for the purchase of new room-heating burners or gas furnaces. Their cost exhibit includes $73,480 for house piping and conversion of 1,837 units (Item B, Exhibit K, page 63). Specifically, this amount is to allow for piping or re-piping of the homes now using LP gas and converting their appliances and for piping of other houses to connect up with the new gas appliances to be bought by the customer (2T179). This would seem to remove a great part of the initial outlay of the prospect who is sought to convert from other forms of house heating. However, no specific measurement of the extent of this betterment was suggested or is perceived. Mr. Perry, who has wide background in this business and in this area, definitely asserts it has been their experience that the residents do purchase space heaters and convert from the present fuel to the use of natural gas.

In the third place, the Commission has "passed" some cases with predictions in the 90% range, *viz.:*

(a) On December 12 last, a section 7(a) order issued to the *City of Montezuma, Georgia*, CP64-57, 30 FPC 1476 upon the basis of an engineering report

[6] The Staff quotes a recent Initial Decision which applied that form of test. *Cf.* 21 FPC 552, 566.

by Merritt and Welker of Marietta, which shows 1,262 potential customers and estimates that 70%, 80% and 85% of them will be attached by the end of the first, second and third years,[7] almost exactly as here claimed. The population-meter ratio there accepted figures out to 3.6, or *less* conservative than for Valley District. It was testified that the financial firm in the present case successfully marketed Montezuma's bonds at less than 5% (3T290). However, nearly half the investment was absorbed through a public works grant from the Housing and Home Finance Agency.

(b) Engineer Perry claimed that another town in the general area, *Adairsville, Georgia*, was also approved by FPC on a prediction of 70–80–90% sales attached in the first three years and that now, as of the end of the first year, Adairsville is ahead of their quota with 72.5% attachments (3T273).[8]

(c) In 1962, *LaCygne, Kansas*, was ordered to be served on the premise that 94% of the potential market would be sold, with a population-meter ratio of 2.4 and investment per customer of $612 (27 FPC 967, 973, 977).[9]

In the fourth place, it seems unusual that as many as 44% of the present homes heat with LP gas; this gives Valley District a "head start" on their sales program because all of them, with a savings in prospect, will expect to convert. This factor also explains the Sylvester, Georgia, case where Mr. Perry, as stated, predicted much lower than 90% saturation, for in that city only one out of eight prospects was already an LP user (3T258).[10]

In the fifth place, the project is financeable, a factor which in other cases has added weight to the evidence of feasibility. The financial witness represents a firm which has handled "a lot" of these cases, financed a "great many" of them (1T131) and already has agreed to underwrite Valley District's revenue bonds and to purchase them if they are not sold otherwise (1T135). Recognizing that such revenue bonds are something less than "gilt edge", the financier has agreed they will offer the bonds to institutional investors who have their own sophisticated means of judging their risks, and who actively seek some participation in these high-yield, tax-free issues as a means of balancing out their portfolios.

---

[7] See p. 38 of the report filed in CP64–57.

[8] Inexplicably, what was said about FPC action is not true at all. The Commission's order is dated September 6, 1961, in Docket CP61–308 (26 FPC 468). The engineering report on file in that docket is by Mr. Perry's firm and instead of predicting 70–80–90% of potential customers to be attached in the first three years, actually shows 53.9%, 64% and 73.4% respectively. (Ex. G, p. 4 in CP61–308). But the same report announces "known operating results" of three other towns in Alabama and Georgia where the customer connections are supposed to have been 62.8%, 89.4% and 99% of the potential in their first three years.

Nothing in the present record (so far as known) in the Commission's files would serve to affirm the testimony about Adairsville's actual experience, or that of the other three towns just mentioned. It can only be concluded that if these cases are to be judged by results of other towns (which the Staff here proposes, following this Examiner in a recent case and numerous other precedents), then some better method must be developed to ascertain the true results of such other towns' operations.

[9] These figures compare with a ratio of 2.44 and investment per customer of $725 as derived from the Adairsville file just mentioned.

[10] At the same time, Sylvester leads the Applicant astray into the statistical error of transplanting percentages—it will plainly not do to take the percentage of Sylvester's total potential who are (1) expected to attach but (2) who do not use LP (that is, 56% of the total), and expect to apply that percentage to Valley District's total, since the two bases are so dissimilar. Their brief proclaims they will sell 99.6% of the whole area by this method (p. 16). To complete the *reductio ad absurdum*, had Mr. Perry happened to find just eleven more LP tanks than the number he reported (1,002: Item B, Ex. I, p. 28), the percentage method presented at several places in their brief would have prognosticated sales to 2,299 customers, two *more* than the entire potential in the area (*id.*, p. 33). This error of method appears in their brief at pp. 16, 17, 22 and 29.

Insofar as Commission protection of investors is often said to be the basis for its feasibility requirements, the witness here answered "none whatsoever" to this question: To what extent do prospective investors in small municipal projects rely or depend upon the FPC certificate to assure the project will be successful? (3T296–304). Also, it is regarded as stipulated in the record that the underwriters will not offer the bonds to private individual investors who would not be in a position to make their own verification (3T299).

(4) *The result.*

The result of these conflicting factors in "the difficult task of evaluating the conflicting predictions of experts" [11] is that feasibility of Valley District is quite possible, in truth, with developed performance like that of some other projects approved by FPC, it is in the probable class (the standard cited at 20 FPC 213, 216).

The possibility of failure cannot be denied, but how that could be of irreparable consequence to anyone but the bondholders is not perceived. Some older cases apprehended that a failure would be visited on the general taxpayers (21 FPC 853), but here only revenue bonds will be issued and the Staff's efforts to counter that feature (Brief, p. 42) are quite remote and farfetched.

Some other cases have demanded a strong feasibility proof on the basis that a pipeline investment for a lateral was involved and failure would redound to the expense of present customers, but no special investment by Southern Natural has been mentioned here and this tiny share of its general capacity can hardly be consequential or even measurable. Other cases have mentioned the jeopardy to the new domestic customers who convert to gas heating and may be captive to whatever rate increase might be required to keep the system solvent. But since the advent of LP gas this factor must lose force, since anyone dissatisfied could always return to that source of gas, for which the costs are only $8 per *year* higher and, after all, only the very amount that half the residents are already paying now. (Item B. p. 59). Finally, some cases have mentioned the scarce supply of gas, which (with space-heating limitations as then in force) should not be monopolized by marginal projects, but that view hardly seems currently to be relevant.

The Commission often has reiterated it has no function or jurisdiction to guarantee local projects, 28 FPC 979, 982, hence no conclusive, definitive, formal finding of feasibility is or ever has been required. A "reasonable probability" (*Id.*), not much more than a fair and demonstrated possibility, may be all the law requires—note the statute speaks only in terms of "necessary or desirable in the public interest." After all, it is hard to discover the *public* interest in the recommended denial of the proposal of the *people* in the area to permit them to bring gas to their homes and, hopefully, to their industries when the only significant risk is that of the bondholders who have not asked for and do not require the Commission's protection.

The effort should be to facilitate, not debar, the public advantage in receiving gas service that has often been remarked (19 FPC 143, 148; Op. No. 424 of April 6, 1964, 31 FPC 789; Op. No. 435 of July 17, 1964, 32 FPC 158). Upon proof that the people of this area really want it and in substantial numbers will buy it (as to which, see below), it is believed the true balance of the public interest calls for them to be permitted the chance to achieve their program. It would be a heavy hand of the law indeed which, in the name of the public interest, would deny to the public the privilege to carry on a program, in which the public has an interest, that has the blessing of everyone concerned. If,

[11] Opinion No. 435, July 17, 1964, 32 FPC 158 at 161.

through conceivable mischance, some reorganization does eventuate, and some recasting of the debt structure, the people will still be getting gas, some authority will still operate the system, and the bondholders will only experience the delay or risk which their high interest rates[12] are intended to compensate. When, to them, the Commission can say *caveat emptor*, as it often has, it is not necessary to nonsuit or veto this program of the people of the district at large.

(5) *The performance required.*

The Staff's recommended denial is based on a long line of decision—though many of them may have been based on reasons no longer obtaining—which are binding here at the initial decision stage. To assure, as the precedents require, the reality of the market claimed (1,608 customers in the first year), is seems necessary to refer to the proposed retail tariff (Item B, p. 90) which calls for a $5 deposit by each customer before service begins, and to condition the order to make it operative only upon the actual collection of those deposits, to be held in escrow.

Their witnesses indicated this is really the program anyway—first, to undertake a real civic campaign of education to popularize the need for mass participation if the Gas District is to pay its way, then undertake a customer-by-customer canvass "to sign them up", (3T276–278, 282–3) and then, so it was testified, collect the $5 deposit before the bonds are sold or contract awarded, "in order that we may have then a list of those people to know where to run service as construction progresses." (2T211–212, 3T276–278, 3T282–3).

The effect of the condition hereto attached, in keeping with the Commission's feasibility rulings, is to require that the $5 deposit be collected individually and in hand, from the 70% of the potential customers who are confidently predicted for the first year, before Southern Natural is required to effect its connection. The deposits are to be held in escrow and unspent until service actually begins or until they are refunded to the depositors. The actual collection of even this small sum from 1,608 customers will demonstrate most concretely that the people of the area want this service and will buy it in such substantial numbers that its feasibility will be manifest and adequately be assured.

V. Findings and Order

Upon consideration of the whole record, including the application filed, it is further found and concluded that:

(1) Southern Natural Gas Company is subject to the Natural Gas Act (21 FPC 155).

(2) Applicant, the Chattahoochee Valley Gas District, is a municipality of the State of Alabama within the meaning of Sections 2 and 7(a) of the Natural Gas Act and is authorized to engage in the local distribution of natural gas to the public.

(3) Subject to the conditions below, which are required in the public interest, it is necessary and desirable in the public interest to direct Southern Natural to connect its system with the proposed facilities of the applicant and to sell natural gas to the applicant for resale, all as proposed in the application.

(4) The action herein ordered will place no undue burden on Southern Natural, nor impair its ability to render adequate service to its customers.

ACCORDINGLY IT IS ORDERED, subject to review by the Commission, that:

(a) Southern Natural Gas Company shall establish a physical connection of its transportation facilities with the facilities to be installed by the Chattahoochee

[12] Equal to 8 to 10% rate of taxable interest (3T298).

Valley Gas District, and sell natural gas to the District, as described in the application.

(b) Southern Natural shall report to the Commission the date of commencement of service to the applicant.

(c) This order is subject to each and all of the following conditions:

(1) The order is effective upon completion of the pertinent facilities of Southern Natural as covered in its application in Docket CP64-259.

(2) Applicant shall be prepared to receive natural gas from Southern Natural, as proposed within one year from the effective date of this order, and shall execute a service agreement with Southern Natural in accordance with FPC regulations.

(3) Applicant shall collect and receive the $5 deposit referred to in its proposed tariff (Item B, p. 90) from each of at least 1,608 customers, and furnish to the Commission and to Southern Natural its written certification of the amounts so collected, all such collections to be held in escrow until the applicant begins gas service.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-12

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 17, 1964)

On July 13, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP65-12 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain meter and regulator equipment which would enable Applicant to render direct interruptible natural gas service to six new industrial customers located in Texas, Oklahoma, and Kansas, all as more fully represented in the application in this proceeding.

Applicant seeks specific authority to construct and operate the following facilities:

(1) Tap Applicant's Oklahoma City 20-inch pipeline in the Northwest Quarter of the Northwest Quarter of Section 31, Township 26 North, Range 1 West, Kay County, Oklahoma, and install meter and regulator facilities to sell direct interruptible gas to Mr. Arden C. Finch for the operation of a restaurant and filling station. (per annum sale 1200 Mcf)

(2) Tap Applicant's Pampa 20-inch pipeline in the Southwest Quarter of Section 5, Block 3, I. and G. N. Survey, Gray County, Texas, and install meter and regulator facilities to sell direct interruptible gas to Mr. John Spearman for irrigation operations. (per annum sale 2735 Mcf)

(3) Tap a 2-inch pipeline belonging to Mr. John Spearman, Mr. J. W. Campbell and Mr. Jack H. Benton in the Northwest Quarter of Section 5, Block 3, I. and G. N. Survey, Gray County, Texas, and install meter and regulator facilities to sell direct interruptible gas to Mr. J. W. Campbell for irrigation operations. (per annum sale 2735 Mcf)

(4) Tap a 2-inch pipeline belonging to Mr. John Spearman, Mr. J. W. Campbell, and Mr. Jack H. Benton in the Northeast Quarter of Section 4, Block 3, I. and G. N. Survey, Gray County, Texas, and install meter and regulator facilities to sell direct interruptible gas to Mr. Jack H. Benton for irrigation operations. (per annum sale 2735 Mcf)

(5) Tap Applicant's Wichita-Ottawa 20-inch pipeline in the Southwest Quarter of the Southwest Quarter of Section 12, Township 17 South, Range 19 East, Franklin County, Kansas, and install meter and regulator facilities to sell direct interruptible gas to the Ottawa Bible Church for space heating. (per annum sale 750 Mcf)

(6) Tap Applicant's Sedalia 12-inch pipeline in the Northeast Quarter of the Northeast Quarter of Section 26, Township 16 South, Range 21 East, Miami County, Kansas, and install meter and regulator facilities to sell direct interruptible gas to Mr. John J. Robertson for oil heat treating operations. (per annum sale 1825 Mcf)

Applicant submits that each sale is fully interruptible in character and none of the volumes to be sold replaces or supplements natural gas previously purchased from distributing utilities or municipalities. The subject volumes of gas will be used for irrigation, oil field operations, or small space heating purposes.

Applicant further submits that the total estimated cost of the six proposed projects is $3,230.00, to be paid out of treasury cash.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on September 15, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate to be issued by this order is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maxi-

mum delivery obligations of the Cities Service Gas Company for firm resale service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed natural gas facilities as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of the Cities Service Gas Company for firm resale service to its customers.

(D) The facilities hereby authorized in paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 30 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

SHARPLES AND COMPANY PROPERTIES (OPERATOR), ET AL., DOCKET NO. RI64-759

ORDER ACCEPTING OFFER OF SETTLEMENT, ACCEPTING NOTICE OF CHANGE, REQUIRING FILING OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued September 18, 1964)

On August 10, 1964, Sharples and Company Properties (Operator), *et al.* (Sharples) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Montana-Dakota Utilities Co. (Montana) by Sharples. The offer relates to a sale made under Sharples' FPC Gas Rate Schedule No. 1 in Big Horn and Washakie Counties, Wyoming. The proposed increased rates were suspended by order of the Commission in Docket No. RI64-759 and were made effective by Sharples on June 5, 1964.

Under the terms of the offer, Sharples proposes to eliminate the price escalation provisions from its rate schedule and to establish a 14.0256¢ per Mcf rate for the subject sale. No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the Seventh Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order 273, issued November 27, 1963, 30 FPC 1370, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Sharples offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax

increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Sharples rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceeding on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Sharples on August 10, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Sharples on August 10, 1964, is hereby approved in accordance with the provisions of this order.

(B) Sharples shall file, within 30 days from the date of issuance of this order, an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating all price escalation provisions therefrom. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The notice of change in rate filed by Sharples to its FPC Gas Rate Schedule No. 1 on July 15, 1964, in accordance with its settlement proposal be and the same is hereby accepted.

(D) Upon notification by the Secretary of the Commisson that Sharples has complied with the terms and conditions of the order, the rate and charge of 14.0256¢ per Mcf at 15.025 psia, specified in its offer of settlement shall be effective as of September 10, 1964, and the above designated proceeding shall be deemed terminated.

(E) The acceptance by the Commission of the Sharples' offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Sharples, including area rate or other similar proceedings.

OPINION NO. 443

SUSQUEHANNA POWER COMPANY AND PHILADELPHIA ELECTRIC POWER COMPANY, PROJECT NO. 405; PHILADELPHIA ELECTRIC COMPANY, PROJECT NO. 2355.

MEMORANDUM OPINION AND ORDER ISSUING LICENSE (MAJOR); DISAPPROVING PERIOD OF CONTRACT FOR SALE OF POWER AFTER EXPIRATION OF LICENSE; AND ORDER AMENDING LICENSE

(Issued September 21, 1964)*

Syllabus

1. Where proposed operator of pumped storage project is same as licensee of existing hydroelectric project, it may frequently be more feasible and

*Order issued November 9, 1964, modifying license and otherwise denying rehearing.

appropriate to amend existing license to include new project work within its terms. P. 829.

2. However, where such applicant is not same as existing licensee or where remaining term for existing license is not long enough to provide reasonable assurance that new development, if included within license, would constitute sound use of applicant's financial resources, special questions will arise, as here. P. 829.
3. Section 22 of Federal Power Act refers specifically to contracts for sale and delivery of power—it is clear from language and legislative history thereof that any agreement which might be approved, and as such be binding upon successor licensee, or United States if it exercised recapture rights, was to be limited to post-license sale of project power. P. 830.
4. Commission was given no authority to approve other agreements between licensee and third party which, as a result thereof, could impair rights of successors to the licensee—sole reason for Section 22 was recognition of possible situations where, in absence of power contracts extending for a period beyond license termination date, licensee would be unable to sell project power. P. 830.
5. Commission has power to give applicant for license for Muddy Run pumped storage project reasonable assurance that during license term Conowingo reservoir will continue to be available as primary source of water for such facility. P. 830.
6. It is established that under Section 10(a) of Act, Commission is authorized to issue license for any project it believes "best adapted to a comprehensive plan for improving or developing a waterway or waterways * * * for improvement and utilization of water power development and for other beneficial public uses, including recreational purposes". P. 831.
7. Commission's comprehensive licensing authority is not restricted by any rights of existing licensees to be free of encroachment from new project where Commission finds that resulting totality of river development, giving full consideration to any negative effects of encroachment, is most conducive to comprehensive development. P. 831.
8. Where record indicates that encroachment will significantly impair operational value of existing project, Commission has included provision in new license requiring compensation to existing licensee. P. 831.
9. Through exercise of its powers under Section 10(a) of the Act, Commission vests in Muddy Run right to utilize Conowingo pool for forty-year license period as integral part of its licensed operation. P. 831.
10. If United States exercises its recapture power at end of present license term, reasonable provision for compensation will serve to reimburse new owner for some portion of net investment price of Conowingo represented by construction costs beneficial to Muddy Run as well as to original project. P. 832.
11. After expiration of existing Conowingo license (or after an annual license issued thereafter), licensee for Muddy Run should share annual costs of jointly used facilities. P. 832.
12. Extent of such sharing between two privately-owned projects should be limited to one-half of annual costs of jointly used facilities and, within this range depend upon the relative ratios of net benefits of the two projects. P. 832.
13. Regardless of ratio of net benefits, new project should only share in paying a proportional amount of half of annual operating costs of jointly used

facilities—under instant circumstances, determination and methodology upon which it is based is considered fair and reasonable. P. 833.

14. Since licensing of the Muddy Run project would clearly add to comprehensive development of this reach of Susquehanna, its authorization as proposed is consistent with statutory criteria. P. 833.
15. New provisions for recreation in applicant's plan of development will result in substantial net recreational advantages as a result of construction of Muddy Run project. P. 834.
16. Commission *finds* that approval of proposed contract between applicant for new license and joint licensees of existing project for sale of power beyond February 19, 1976, would be an inappropriate application of its authority under Section 22 of the Act and not in public interest. P. 834.
17. In a proceeding under Section 4(e) of the Federal Power Act, Commission *issues* license; *amends* license and *disapproves* period of contract for sale of power after expiration of license.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

Application[1] was filed on January 29, 1964, by Philadelphia Electric Company (Applicant) of Philadelphia, Pennsylvania, for a 40-year license under Section 4(e) of the Federal Power Act for the proposed Muddy Run Pumped Storage Project designated as Project No. 2355, to be located on the Susquehanna River and its tributary Muddy Run, in Lancaster and York Counties, Pennsylvania.

The proposed installed capacity of the project is 1,104,000 horsepower connected to generators having a total rated capacity of 800,000 kilowatts. The power output from the project would be delivered by Applicant to the bulk power transmission systems of companies interconnected through the Pennsylvania-New Jersey-Maryland Interconnection and the recently announced Extra High Voltage Transmission Grid interconnecting regions of the Middle Atlantic States. The project will provide peaking capacity needed by the interconnected power system. Applicant proposes to use the Conowingo Reservoir of Project No. 405, whose license expires on February 19, 1976, as the lower pool for its Muddy Run Project. The proposed project boundaries for Muddy Run would include that part of the Conowingo Reservoir which it will utilize. The Commission gave public notice of the application as required by the Federal Power Act.

On January 29, 1964, the Susquehanna Power Company and Philadelphia Electric Power Company, joint licensees for the Conowingo Project (Conowingo) No. 405, and Philadelphia Electric Company, Applicant for a license for the proposed Muddy Run Pumped Storage Project (Muddy Run) No. 2355, filed a request for Commission approval under Section 22 of the Federal Power Act

[1] This application was preceded by the filing of a joint application filed on April 1, 1963 by the Susquehanna Power Company and Philadelphia Electric Power Company (Joint Licensees for Conowingo Project No. 405) for a 50-year license covering: (1) the proposed Muddy Run project and (2) the joint licensees' existing Conowingo development on the Susquehanna River designated Project No. 405 for which a 50-year license was issued February 20, 1926. On January 29, 1964, the joint application was amended by the Joint Licensees and Philadelphia Electric Company by eliminating the request for a new license for the Conowingo Project, and by substituting Philadelphia Electric Company as sole Applicant for Project No. 2355 covering the Muddy Run project only, and to request a 40-year license for the Muddy Run project.

(17 U.S.C. 815),[3] of a proposed contract dated January 29, 1964, betweeen the joint licensees for Project No. 405 and the Applicant for Project No. 2355 under which the joint licensees would sell and deliver virtually the entire output of the power from Project No. 405 to Philadelphia Electric Company until the termination date specified in the license for Muddy Run, which under the forty-year license requested, would be 2004.

The Commission gave public notice of that application on February 28, 1964. No protests or petitions to intervene were received. The Pennsylvania Public Utility Commission, the public service commission in that state in which the sale or delivery of power to be made, approved this contract on February 11, 1964.

This case presents important questions with respect to the licensing of pumped storage developments which would utilize as their primary source of water the reservoir of an existing licensed project. Where the proposed operator of the pumped storage project is the same as the licensee of the existing hydroelectric project, it may frequently be more feasible and appropriate to amend the existing license to include the new project works within its terms. But where the applicant for the pumped storage development is not the same as the existing licensee or where the remaining term for the existing license is not long enough to provide reasonable assurance that the new development, if included within the license, would constitute a sound use of the applicant's financial resources, special questions will arise, as they have here. Since this is a case of first impression, we are setting forth in some detail in this order our views as to (1) the inappropriateness of the Section 22 proposal advanced by the applicant as a device for insuring the continued availability of an existing project's reservoir to a new pumped storage project and (2) the general manner in which we believe these problems of joint utilization of facilities can and should be resolved.

1. In addition to providing for the sale and purchase of power, the proposed contract provides that Conowingo will: (1) operate Conowingo in accordance with sound engineering practices so as to achieve the maximum output of hydroelectric power and water conditions in the Susquehanna River at the times when the energy is required by the Philadelphia Electric Company; (2) maintain the reservoir, dam and appurtenant project works of Conowingo in first class working condition throughout the term of the agreement; (3) not take any action to impair its ability in any manner to fulfill its obligations under the contract, and (4) coordinate the operation of Conowingo with the Muddy Run Project.

The parties to the contract have stated in their application that the bulk of the power output of Conowingo has been sold to the Philadelphia Electric Company since the commencement of its operations under existing contracts. The only justification advanced to show that our approval of the proposed contract is in the public interest is that it would make possible the continued availability of

[3] Section 22 of the Act provides:

That whenever the public interest requires or justifies the execution by the licensee of contracts for the sale and delivery of power for periods extending beyond the date of termination of the license, such contracts may be entered into upon the joint approval of the commission and of the public-service commission or other similar authority in the State in which the sale or delivery of power is made, or if sold or delivered in a State which has no such public-service commission, then upon the approval of the commission, and thereafter, in the event of failure to issue a new license to the original licensee at the termination of the license, the United States or the new licensee, as the case may be, shall assume and fulfill all such contracts. [41 Stat. 1074; 16 U.S.C. 815.]

the Conowingo Reservoir to the Muddy Run Project beyond the expiration of the Conowingo license and for the full term of the Muddy Run license.

The Applicant's desire to be assured of the continued availability of the Conowingo Reservoir as a lower pool and to be free from both physical and undue financial interference with its project for the full term of the proposed Muddy Run license is understandable. The Applicant needs the assurance that its right to use the reservoir will be respected after the expiration of the Conowingo license in the event of recapture by the United States, or in the event of the issuance of a new license to a new licensee. We do not believe, however, that approval of the proposed contract under Section 22 of the Federal Power Act is necessary, or in fact will provide this assurance.

Section 22 of the Federal Power Act refers specifically to contracts for the sale and delivery of power. It is clear from the language of Section 22 and its legislative history that any agreement which might be approved, and as such be binding upon a successor licensee, or the United States if it exercised its recapture rights, was to be limited to a post-license sale of project power; the Commission was given no authority to approve other agreements between a licensee and a third party which, as a result of this approval, could impair the rights of successors to the licensee. The sole reason for the section was the recognition that there might be situations where, in the absence of power contracts extending for a period beyond the license termination date, the licensee would be unable to sell the project power.[2]

In the instant case, applicants do not suggest that a contract for the sale of power extending beyond the term of the Conowingo license is necessary or even relevant to the continued sales of Conowingo power to Philadelphia Electric through the end of its license period for Project No. 405. Accordingly, the Commission's approval of the proposed contract pursuant to Section 22 would be an inappropriate exercise of our discretion to approve post-license sales contracts. Furthermore, the contract provisions between the parties purporting to preclude any action by the Conowingo licensees inimical to the interests of Muddy Run, would not be binding upon any successor taking over the ownership and operation of Conowingo after the expiration of its license, because those provisions are not for "the sale and delivery of power," the only contract provisions which are binding upon a successor to a licensee in the event of contract approval under Section 22 for the post-license sale of power.

2. We do not mean to suggest by the above discussion that Philadelphia Electric, the proposed licensee of the Muddy Run project, does not have a legitimate interest in insuring, before it embarks upon a project of this magnitude that the situation be not substantially changed subsequent to the end of the present Conowingo license in 1976 in a manner which it cannot now evaluate. It obviously would make little sense for Philadelphia Electric to accept any license for Muddy Run without reasonable assurance that during its license term the Conowingo reservoir will continue to be available as the primary source of water for the Muddy Run pumped storage facility. We have the power to give Appli-

---

[2] In its only exercise of its authority under Section 22, the Commission on April 7, 1964, approved a contract for a sale of power extending for a maximum of about four and a half years beyond the termination of the license for Project No. 2305, between the licensees, Sabine River Authority of Texas and the Sabine River Authority, State of Louisiana, on the one hand, and the Gulf States Utilities Company, Central Louisiana Electric Company, Inc., and the Louisiana Power and Light Company on the other. The reason why approval of this contract was held to be in the public interest was that the joint licensees could not sell the power from Project No. 2305 without such approval. Additionally, the licensees were state agencies and the project is not subject to recapture.

cant such assurances within the ambit of our existing licensing authority under the Act.

It is established that the Commission, under Section 10(a) of the Act, is authorized to issue a license for any project which it believes is "best adapted to a comprehensive plan for improving or developing a waterway or waterways * * * for the improvement and utilization of water power development and for other beneficial public uses, including recreational purposes". The Commission's comprehensive licensing authority is not restricted by any rights of existing licensees to be free of encroachment from a new project where the Commission finds that the resulting totality of river development, giving full consideration to any negative effects of the encroachment, is most conducive to comprehensive development. Thus, the Commission in a number of cases has authorized a new project which has encroached upon existing projects licensed to other parties in a manner which impaired the actual or potential operation of the existing project to a far greater degree than would be the case here.[4] Where the record indicates that such an encroachment will significantly impair the operational value of the existing project, the Commission has included a provision in the new license requiring it to compensate the existing licensee for the loss.[5]

There are thus two problems to be resolved: (1) to insure that Muddy Run can continue to utilize the Conowingo reservoir for the life of its license even if, after the expiration of the Conowingo license in 1976, that project be recaptured by the United States or licensed to a new licensee; (2) to determine the extent to which, if any, Conowingo should be compensated for the use of its reservoir by Muddy Run.

The first of these two issues presents no serious difficulty. We shall in the license to be issued for the Muddy Run project exercise our authority under Section 10(a) of the Act expressly to provide for Muddy Run's utilization of the Conowingo Reservoir as a source of water and afterbay for the full forty-year period of the Muddy Run license. The continued operation of the Muddy Run project after the expiration of the Conowingo license will also be protected by the fact that its project boundaries will be defined (upon approval of the project exhibits) as including the portion of the existing Conowingo project area which upon completion of Muddy Run will be jointly used by the two projects. (These areas will, of course, also continue to be within the project boundaries of Conowingo.) In sum, through the exercise of our powers under Section 10(a) of the Act, we are vesting in Muddy Run the right to utilize the Conowingo pool for the forty-year period of its license as an integral part of its licensed operation. This will provide adequate protection to Muddy Run in the event that either the United States or a new licensee takes over Conowingo at the end of its license term since they would necessarily take subject to the existing rights of any affected party including the licensee for Muddy Run.

Since the license for Conowingo is held jointly by two subsidiaries of the Applicant for Muddy Run, it can be assumed that whatever transfers of property rights may be necessary to insure that both licensees will thereafter enjoy joint use of the Conowingo Reservoir, can be arranged by mutual agreement, subject, of course, to Commission approval. In addition, we shall by Article 15 of the Muddy Run license require Muddy Run to coordinate its operation with

No. 2 of Grant County, Washington*, Project No. 2114 (28 FPC 718); *Cf. P.U.D. No. 1 of Chelan County, Washington*, Project No. 2145 (18 FPC 25 at 29).

[5] See note 4, *supra*.

that of Conowingo, and, by Article 43, require Muddy Run to avoid any action to impair the existing Conowingo operations. Under these circumstances, we do not believe that in order to protect Muddy Run the Conowingo license needs to be modified to add reciprocal articles providing that the licensee thereof will (1) permit the use of its reservoir by Muddy Run, and (2) will not operate Conowingo in a manner inconsistent with the optimum operation of Muddy Run. If, however, the licensees of the Conowingo project were desirous of including additional license terms and conditions to this effect in the license, we would not object to the amendment of the Conowingo license to incorporate appropriate terms and conditions.

We come now to the question of compensation. We do not have any question here of compensation to Conowingo for damages to its licensed operations by Muddy Run; as conditioned as set forth above, there will be none. Instead, the issue is whether where a new licensee is authorized to utilize the facilities of an existing licensed project it should be required to pay some portion of the costs of the facilities of the existing project which it will use and which is essential to the success of the new project. Assuming that provision for such compensation can be shown to aid in meeting the comprehensive plan standards of Section 10(a) of the Act, we would have the authority under Section 10(g) to include it as a condition of licensing Muddy Run.

We do not believe any such conclusion can be reached for the period prior to 1976 when the Conowingo license expires. Since the Applicant here is the parent of the Conowingo licensees and Muddy Run power will flow into the same electrical system as that of Conowingo, the consumers will secure no benefit from an action having the effect of switching funds between corporate affiliates. Moreover, any compensatory payment to Conowingo would not appear to serve to reduce the net investment in the Conowingo project for recapture or other purposes under the provisions of Sections 14, 3(11), and 10(d) of the Act. Under such circumstances, we see no reason to increase the project costs of Muddy Run, without an amendment to the Conowingo license requiring that any sum payment be applied to reducing the net investment in Conowingo.

We believe, however, that the situation after 1976 will be significantly altered. In the event Conowingo is relicensed to its present licensees, the Commission will be in a position to require that the net investment for that project be reduced in the future by the amount of any such payment. The same will be true if Conowingo is licensed to a new licensee. Moreover, in this case, or if the United States exercises its recapture powers at the end of the present license term, a reasonable provision for compensation will serve to reimburse the new owner of Conowingo for some portion of the net investment price of Conowingo represented by construction costs beneficial to Muddy Run as well as to the original project. Thus, we believe that after the expiration of the existing Conowingo license (or after an annual license issued thereafter), the licensee for Muddy Run should share the annual costs of the jointly used facilities.

The extent of such sharing between the two privately-owned projects should, we believe, be limited to one-half of the annual costs of the jointly used facilities and, within this range depend upon the relative ratios of net benefits of the two projects. It would be inequitable to require a marginal new pump storage project to make a substantial contribution to the costs of the joint facilities if the existing project, without such payments, has very high net benefits. On the other hand, if the net benefits of the new project approaches or passes that of an existing project, it can and should bear a larger share of the joint costs. Thus, making the payment vary with the ratio of the net benefits of the two projects will mean that while all but the most marginal new project will pay *some* compensation for use of the existing licensee's facilities, the amount will

never impair the economic feasibility of the new project. We have concluded that, regardless of the ratio of net benefits, the new project should only share in paying a proportional amount of half of the annual operating costs of the jointly used facilities in view of the facts that the jointly used reservoir was designed and located for the benefit of power production at the original project, and the licensees of this project had obligated themselves to bear all of the reservoir costs.

In adopting this payment formula, we are not intending to establish a precedent governing the method by which such payments should be determined or assessed in all cases of joint use or even that compensation will be required in all such cases. At least until we have further experience with this problem, each case must be considered in the light of its particular factual situation. Under the circumstances in the present application, the determination and the methodology upon which it is based is considered fair and reasonable.

On the basis of presently available information, an annual payment by Muddy Run to Conowingo of $285,000 would in our judgment be appropriate—such payment, in the absence of agreement by the present licensee of Conowingo to deduct such sums from its net investment for Sections 14 and 3(11) purposes, to commence at such time after 1976 as a new license (not an annual license) is issued for the project or it is recaptured.

We recognize that our action here means that at least theoretically the Commission in licensing Muddy Run could be said to be limiting the freedom of action of any new operator of Conowingo, whether it be the United States subsequent to recapture, or a new licensee. We do not believe, however, that any such result is inconsistent with the position we took in the recent *Holtwood* case, Opinion 380, 29 FPC 468, in which we refused to accept the surrender of the license for Project No. 2268 by its licensee, Pennsylvania Power and Light Co. and simultaneously issue a new 50-year license for a somewhat enlarged project—an action which would have had the effect of extending the period before Holtwood would be available for recapture by some 43 years. Our action here not only does not legally preclude recapture (or relicensing to a new licensee) at the end of the original license period for Conowingo, but as a practical matter does not significantly impair the value to any potential new operator of Conowingo over what it would be in the absence of a Muddy Run license. Our investigation of the matter leads us to the conclusion that Conowingo's present mode of operation makes the optimum use of its facilities and any successor operator would be most unlikely to wish to change them in a manner which would conflict with their obligations to Muddy Run. In these circumstances, since the licensing of the Muddy Run project would clearly add to the comprehensive development of this reach of the Susquehanna, its authorization as proposed is consistent with the statutory criteria.

Joint application was filed on January 29, 1964, by The Susquehanna Power Company and Philadelphia Electric Power Company, joint licensees for Conowingo Project No. 405, for further amendment of the license for the Conowingo project to exclude therefrom certain intercorporate agreements and leases in the license to such agreements and leases which were entered into with the approval of the Commission at the time that the license was issued. Public notice of the filing of the application has been given. The agreements and leases are referred to in the ninth "Whereas" clause commencing on page 5 of the license, and are set forth in Article 23 through Article 30 of the license. These agreements and leases were entered into in order to have four affiliated corporations participate in the financing and operation of the project. The application states that these agreements are complicated, cumber-

some, inflexible, and outmoded. The agreements and references thereto sought to be deleted from the Conowingo license by the Joint Licensees no longer serve any useful purpose and such deletion would neither affect the terms of the license nor the power output of the project. Accordingly, it is believed appropriate and in the public interest to delete such agreements and references thereto as requested.

These agreements which provide for services and charges for the output of the Conowingo project are on file as rate schedules under the Federal Power Act and will remain so unless superseded or cancelled in accordance with the provisions of Part 35 of the Commission's Regulations under that Act. If those agreements, as embodied in currently filed rate schedules, are to be superseded by other contractual arrangements to be embodied in superseding proposed rate schedules, it will be necessary for licensees to complete all appropriate rate schedule filings pursuant to Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

The Secretary of the Army and the Chief of Engineers, have reported that the plans of the project structures are satisfactory insofar as the interests of navigation are concerned. The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interest of the Department respecting access roads, fishing and hunting and other recreational uses of the project area. The Department of Health, Education, and Welfare, in reporting on the application, advised that the project is not expected to have any adverse effects on water supply or water quality.

An informal protest filed on February 7, 1964, by the Pennsylvania Federation of Sportsmen's Clubs, enclosed a resolution which asserted that recreation would be affected by the fluctuation of the Muddy Run reservoir; also, that rapid return and withdrawal of water from the Conowingo reservoir would affect fishing, hunting, and water sports and be detrimental to natural fish propagation in the lake. Applicant's plan of development provides for a separate lake, 98 acres in area, at the northeastern end of the Muddy Run reservoir which will be maintained at a constant level and will be developed for boating and water sports. The perimeter will be developed for recreation such as camping and picnicking. A five hundred acre area adjacent will be developed as a natural wildlife refuge. Moreover, Applicant proposes to install screens or other protective devices at the Muddy Run pump intakes in the Conowingo Reservoir to protect the fishery. We believe that these new provisions for recreation will result in substantial net recreational advantages as a result of construction of the Muddy Run project.

The Commission finds:

(1) That the approval of the period of the proposed contract between the joint licensees for Project No. 405, the Susquehanna Power Company and the Philadelphia Electric Power Company, on the one hand and the Philadelphia Electric Company, on the other, for the sale and delivery by the joint licensees to the Philadelphia Electric Company of virtually the entire output of the power from the Conowingo project, Project No. 405, from February 19, 1976, until the termination of the license for the proposed Muddy Run Project No. 2355, would be an inappropriate application of the Commission's authority under Section 22 of the Federal Power Act and would not be in the public interest.

(2) Applicant is a corporation organized under the laws of the State of Pennsylvania and has submitted satisfactory evidence of compliance with all

applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given as required by the Act. Except as recited above, no protests or petitions to intervene have been received. No conflicting applications have been filed.

(4) The issuance of a license for the project as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the proposed project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 1,067,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) The 13.8 kv generator leads, the four 13.8/220 kv step-up transformers at the proposed plant, the 220 kv circuit line from Muddy Run to the Peach Bottom Substation, mentioned in paragraph (C) below and which were included in the application for license, as parts of the project within the meaning of Section 3(11) of the Act, and should be included in the license for the project.

(8) The exhibits designated and described in paragraph (C) below conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent therein indicated.

(9) It will be appropriate and in the public interest to amend the license for Project No. 405 as hereafter provided.

The Commission orders:

(A) Application for approval of the proposed contract between the Susquehanna Power Company and the Philadelphia Electric Power Company on the one hand and the Philadelphia Electric Company on the other, for the sale and delivery of power from the Conowingo Project, No. 405, until the termination of the license for the proposed Muddy Run Project, No. 2355 be and is hereby denied.

(B) This license is hereby issued to Philadelphia Electric Company (Licensee) of Philadelphia, Pennsylvania, under Section 4(e) of the Federal Power Act (Act) for a period of 40 years, effective as of September 1, 1964 for the construction, operation and maintenance of Project No. 2355 on the Susquehanna River, a navigable water of the United States, and its tributary Muddy Run, in Lancaster and York Counties, Pennsylvania, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(C) Proposed Project No. 2355 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the

amended application for license, and which are designated and described as follows:

Exhibit	*FPC No.*	*Showing*
J	2355–14	General Map of Project Area
K	2355–15	Reservoir
	2355–16	Reservoir
	2355–17	Property Plan
	2355–18	Property Plan
	2355–19	Property Plan

(ii) All project works consisting principally of: (1) a rock-fill dam on Muddy Run and low dikes creating (2) upper reservoir controlled by a spillway with total storage capacity of 60,500 acre-feet and usable storage of 35,500 acre-feet between elevations 520 feet and 470 feet, (3) an open canal about 2,300 feet long leading to intakes of (4) four concrete lined shafts about 350 feet long to (5) four horizontal concrete lined tunnels to (6) four transition wye tunnels about 160 feet long to (7) eight steel lined tunnels about 507 feet long to (8) an outdoor type powerhouse containing (9) eight reversible pump-turbines connected to eight motor-generator units, each rated at 100,000 kw, (10) four 13.8/220 kv step-up transformers and circuit breakers, (11) two 220 kv single circuit transmission lines extending across Conowingo reservoir and on twin circuit towers to Peach Bottom Substation, (12) use of Conowingo reservoir (FPC Project No. 405) as an afterbay causing a fluctuation of about four feet and (13) appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the amended applications for license and which are designated and described as follows:

Exhibit L	*FPC No.*	*Title Muddy Run Development*
Sheet 1 of 7	2355–20	Plan of Development Structures
Sheet 2 of 7	2355–21	Dam & Canal, Sections
Sheet 3 of 7	2355–22	Tunnels, Plan & Sections
Sheet 4 of 7	2355–23	Powerhouse, Sheet No. 1
Sheet 5 of 7	2355–24	Powerhouse, Sheet No. 2
Sheet 6 of 7	2355–25	Cofferdam & Tailrace

The above Exhibit L drawings are approved only as to the general information shown.

Exhibit M (Revised) entitled, "General Description of Structures and Equipment", filed April 24, 1964.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(D) This license is also subject to the terms and conditions set forth in Form L–4 (Revised June 1, 1964) entitled "Terms and Conditions of License for Unconstructed Project Affecting Navigable Waters of the United States", which

terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall commence construction within one year from the effective date of the license and shall thereafter in good faith and with due diligence prosecute such construction and shall complete construction of such project works within six years from the effective date of the license.

Article 31. The Licensee shall submit in accordance with the Commission's rules and regulations Exhibit L drawings showing the final designs of the project works and the Licensee shall not begin construction of the project structures until the Commission has approved such exhibits.

Article 32. The Licensee shall, within one year from the date of completion of the project, file for Commission approval Exhibits F and K prepared in accordance with the Commission's rules and regulations.

Article 33. The Licensee shall submit in accordance with the Commission's rules and regulations exhibit drawings showing the project transmission lines crossing the Conowingo Reservoir, including a profile with minimum clearance, and the Licensee shall not commence construction of these lines until the Commission has approved such exhibits.

Article 34. The Licensee shall install a weir below the dam across Muddy Run for the purpose of measuring the seepage flow and water turbidity below the dam and correlated with rainfall and surface elevations. The Licensee shall also install several observation wells in the downstream slope of this dam in order to correlate water pressure in the foundation with reservoir water surface elevations. Any abnormal changes in conditions at the weir or in the wells shall be promptly analyzed and reported to the Commission.

Article 35. The Licensee shall employ a board of consultants to review the designs, specifications, and construction of the dam and dikes, suitability and treatment of their foundations and of the reservoir floor, the powerhouse and other project facilities. The Licensee shall submit a report of the board covering each portion of the project prior to the submittal of Exhibit L drawings therefor. The Licensee shall also submit a final report of the board covering the construction of the project, and the Licensee shall receive Commission approval prior to the filling of the upper reservoir.

Article 36. The Licensee shall provide at the Muddy Run plant duplicate automatic means for stopping the units from pumping when elevation 520 feet has been exceeded.

Article 37. The Licensee shall take such steps, and secure written approval from the Office of the Chief of Engineers, as are necessary to place limitations on the approach distances which navigation craft, or persons, may come to the Muddy Run powerhouse tailrace in the interest of safety.

Article 38. The Licensee shall, prior to impounding water, dispose of all temporary structures, unused timber, brush, refuse or other inflammable material resulting from the clearing of the land or from the construction and maintenance of the project works, and shall clear all lands in the reservoir upper area up to normal water level; except that all land in the reservoir area shall be cleared according to a plan to be prescribed by the Commission upon the recommendation of the Pennsylvania Fish Commission and the Bureau of Sport Fisheries and Wildlife. The clearing of the lands and the disposal of the material shall be done with due diligence by the Licensee and to the satisfaction of the authorized representative of the Commission.

262-497—67——56

Article 39. The Licensee shall cooperate with the National Park Service, Department of the Interior, Washington, D.C., 20240, to negotiate a contract for archaeological survey and salvage. A sum not to exceed $1,250 shall be provided for initial survey, and a sum not to exceed $3,500, shall be provided for the actual archaeological salvage.

Article 40. Fish screens or other fish-guiding or fish protective devices shall be installed on the draft tubes/pump intakes simultaneously with construction of other project features. The Licensee shall cooperate with the United States Fish and Wildlife Service, and the Pennsylvania Fish Commission in the design of these fish-protective devices.

Article 41. The Licensee shall make available to the Pennsylvania Game Commission, on a long term lease basis, about 500 acres of land adjacent to the Muddy Run Reservoir. These lands shall be fenced and developed to include food and cover plantings at the Licensee's expense, provided that the Pennsylvania Game Commission will manage the area to provide public hunting and will bear operation and maintenance costs. The Licensee, prior to construction, shall negotiate a memorandum of understanding with the Pennsylvania Game Commission, including such details, and this agreement shall be filed with the Commission.

Article 42. The Licensee for Muddy Run Project is authorized to utilize the Conowingo reservoir as a source of water and as a lower pool for the operation of the Muddy Run Project for a period of 40 years from September 1, 1964.

Article 43. The operation of Muddy Run Project shall be such as not to affect injuriously the operation of the Conowingo Project.

Article 44. In consideration of the availability of the Conowingo reservoir to the Muddy Run Project, as a source of water supply and as a lower pool, for the period of the latter's license, the Licensee for the Muddy Run Project shall pay annually, to the Licensee of the Conowingo Project, or its successors or assigns, the sum of $285,000 commencing March 1, 1976.

Article 45. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 1,067,000 horsepower.

(E) The exhibits designated and described in paragraph (C) above are hereby approved as part of this license to the extent therein indicated.

(F) The license for Project No. 405 as amended is hereby further amended, effective as of September 1, 1964, by eliminating therefrom the agreements referred to in the ninth "Whereas" clause, commencing on page 5 of the license and in Articles 23 through 30.

(G) These amendments in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision, or condition of the license for Conowingo.

(H) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of the Muddy Run license and the amendment of the Conowingo license. In acknowledgment of the acceptance of this license for Muddy Run and the amendment of the Conowingo license, they shall be signed for the respective licensees and returned to the Commission within 60 days from the date of issuance of this order.

FORM L-4

(REVISED JUNE 1, 1964)

TERMS AND CONDITIONS OF LICENSE FOR UNCONSTRUCTED PROJECT AFFECTING NAVIGABLE WATERS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, specifications, and statements described and designated as exhibits and approved by the Commission in its order as a part of the license until such change shall have been approved by the Commission: Provided, however, that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed changes which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. Said project works shall be constructed in substantial conformity with the approved exhibits referred to in Article 2 herein or as changed in accordance with the provisions of said article. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 4. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United

States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. Upon the completion of the project, or at such other time as the Commission may direct, the Licensee shall submit to the Commission for approval revised maps, plans, specifications, and statements insofar as necessary to show any divergence from or variations in the project area and project boundary as finally located or in the project works as actually constructed when compared with the area and boundary shown and the works described in the license or in the maps, plans, specifications, and statements approved by the Commission, together with a statement in writing setting forth the reasons which in the opinion of the Licensee necessitated or justified variations in or divergence from the approved maps, plans, specifications, and statements. Such revised maps, plans, specifications, and statements shall, if and when approved by the Commission, be made a part of the license under the provisions of Article 2 hereof.

Article 6. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with navigation, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 7. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operation of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 8. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of cost, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 9. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 10. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 11. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed

structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 12. The actual legitimate original cost of the original project, and of any addition thereto or betterment thereof, shall be determined by the Commission in accordance with the Act and the Commission's rules and regulations thereunder.

Article 13. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 14. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 15. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 16. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 17. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United

States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 18. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 19. So far as is consistent with proper operation of the project, the licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 20. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 21. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 22. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers

within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 23. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as to the Commission may prescribe.

Article 24. In the construction and maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines, and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads. None of the provisions of this article is intended to relieve the Licensee from any responsibility or requirement which may be imposed by other lawful authority for avoiding or eliminating inductive interference.

Article 25. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or

shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 26. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 27. The right of the licensee and of its transferees and successors to use or occupy navigable waters of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 28. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protests within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 29. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC UTILITY DISTRICT NO. 1 OF SKAMANIA COUNTY, WASHINGTON, PROJECT NO. 2199

ORDER DENYING APPLICATION FOR REHEARING AND DENYING ALTERNATIVE MOTION TO REOPEN RECORD

(Issued September 25, 1964)

On August 27, 1964, Public Utility District No. 1 of Skamania County, Washington (Applicant), filed an application for rehearing with respect to our Opinion No. 440, issued July 30, 1964, 32 FPC 444, in which we denied Applicant's application for a license to construct a hydroelectric project on the Little White Salmon River and its Rock Creek tributary. In the alternative, Applicant

moved to reopen the record for the submission of additional evidence. Applicant urges that new developments since our original opinion and order justify a rehearing, alleges that it has been denied a fair hearing by actions of the Commission's staff, contends that it should be permitted to offer evidence in accordance with new standards for determination established by the Commission, alleges that certain statements in the opinion are in error, and contends that some of the conclusions of the Commission should be reconsidered.

The specific events alleged by Applicant to have occurred since the hearing are conclusion of a treaty with the Dominion of Canada with respect to power development and sale, the authorization of the immediate construction of the High Mountain Sheep project, and the authorization of the regional power intertie between the Pacific Northwest and the Pacific Southwest. While all of these are relevant to a determination in the case before us, nothing has occurred in connection with them that was not fully anticipated and considered by the Commission in reaching its original decision. They are matters of public record which would require no submission of additional evidence. We think these events furnish no ground for either rehearing or for reopening of the case for the taking of additional evidence.

We do not believe that the petition's charges against the staff warrant detailed discussion. To the extent they do not consist of rhetorical questions and bare allegations, they appear to rest upon the contention that it was somehow improper for staff counsel to take a position by way of brief or oral argument on matters upon which the staff had not introduced record evidence. The short answer to this claim is that any party to a Commission proceeding, including staff counsel, is free to present to the Examiner and the Commission, his views as to the adequacy of the record on any matter in issue regardless of whether he has introduced evidence on this issue at the hearing. The Commission's decision, of course, must be based upon the hearing record or such matters of which it can lawfully take official notice and cannot rest upon facts supplied by counsel in brief or oral argument. It is not a denial of due process for the staff of the Commission to detail in brief or oral argument wherein it believes an applicant for a license has failed to meet its burden of proof so long as the applicant, as here, has a full opportunity to respond and to demonstrate why it believes the staff's arguments are unfounded.

Applicant correctly points out that the Gifford Pinchot National Forest was erroneously referred to in Opinion No. 440 as the "Gifford Pinchot National Park." The application indicates that this is a ground for reconsideration because lumbering activity takes place in a national forest but not in a national park. The error in the original opinion, however, was of nomenclature only. The lumbering activities within the area were made known to the Commission in the record. The misnomer had no effect on our decision and is not ground for rehearing.

Applicant rightly points out that Opinion No. 440 erroneously states that it was the opinion of staff experts who testified before the presiding examiner that the cost of the project would be such that there would be an increase in the cost of power. As also stated in Opinion No. 440, however, this conclusion was an independent judgment of the Commission. Some of the facts on which it was based are set forth in the same paragraph of Opinion No. 440 as the statement which Applicant has corrected. In addition, the cost evidence submitted by Applicant was unconvincing. The application for rehearing presents nothing which would cause us to change our views in this regard.

Applicant further states that Opinion No. 440 was incorrect in stating, with reference to the Western Fish Nutrition Laboratory well water, that "alteration

of the chemical content of the river * * * would result from water flowing through the reservoir." The diversion of water from the river above the laboratory to the reservoir and the return of water at a point below the laboratory would unquestionably result in a lowering of the river level at the laboratory and upstream therefrom to the point of diversion with resultant alteration in chemical content. There is considerable testimony on the record on this point. Witness Halver states (Tr. 247), "The water quality would incontestably be altered by this proposal and as such poses a real jeopardy to conduct of operations at the Western Fish Nutrition Laboratory."

Applicant further asks that, if the Commission opinion established a new rule that a firm contract for the sale of power from the project is necessary to show economic feasibility, the record be reopened to allow Applicant to show that it could obtain such a contract. It does not specify what evidence it would introduce, nor does it state that any such contract is in existence.

As was said in the original opinion, this Commission does not require that a firm contract for a sale of power be obtained. It is incumbent upon an applicant to make a sufficient showing of economic feasibility to satisfy this Commission. One means of doing so would be to present firm contracts for the sale of power. It is clear from our past practice in issuing licenses that this is not the only means of establishing economic feasibility.

We have determined in the instant case that the applicant has failed to carry its burden of proof to establish that the issuance of this license would be for the benefit of the public. On the allegations in the application for rehearing and alternative motion to reopen the record, we can see no profit in reopening this matter at the present time.

We have considered the other arguments made by Applicant in its application for rehearing and find nothing therein that we have not fully considered upon our original decision to which, after careful reconsideration, we adhere. The application for rehearing and alternative motion for reopening the record will be denied.

The Commission orders:

The application for rehearing of Opinion No. 440 and alternative motion to reopen record filed July 30, 1964, by Public Utility District No. 1 of Skamania County, Washington, are hereby denied.

Commissioner Black *dissenting.*

OPINION NO. 438–A

SHREWSBURY MUNICIPAL LIGHT DEPARTMENT v. NEW ENGLAND POWER COMPANY, DOCKET NO. E–7021

OPINION AND ORDER DENYING REHEARING AND MOTION FOR STAY

(Issued September 25, 1964)*

Syllabus

1. NEES proposal to offer all existing wholesale customers of Massachusetts Electric, including Shrewsbury, direct service from NEPCO pursuant to proposed new wholesale R–1 rate is not believed relevant. P. 847.
2. It is responsibility of NEES system to make delivery to Shrewsbury and install whatever facilities are necessary to insure that this service meets ordinary standards of reliability. P. 848.

*Affirmed, *New England Power Co.* v. *F.P.C.*, 349 F. 2d 258 (CA1–1965).

3. Commission *rejects* contention that its reservation of jurisdiction over NEPCO is not authorized by the Act in Section 202(b) proceedings and is in conflict with Section 207. P. 848.
4. Section 202(b) broadly provides that Commission may prescribe terms and conditions of arrangement to be made between persons affected. P. 848.
5. Section 207 is a separate method of requiring adequate service where there is involved no question of an interconnection. P. 848.
6. Commission *rejects* argument that under Section 202(b) it could not properly cancel power contract between Shrewsbury and Massachusetts Electric, *noting* it might be impossible, as here, to order an interconnection without cancelling pre-existing contract. PP. 848, 849.
7. Commission *denies* application for rehearing and motion for stay.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

On August 26, 1964, New England Power Company (NEPCO) and Massachusetts Electric Company (Mass. Electric) filed a joint application for rehearing of our Opinion No. 438 and order issued July 27, 1964, 32 FPC 373, in which we required NEPCO to sell and deliver energy directly to the Municipal Light Department of the Town of Shrewsbury, Massachusetts. Service to Shrewsbury is now rendered by Mass. Electric. Both companies are members of the New England Electric System and will be collectively referred to as NEES. By motion they also request the Commission to extend the two-month period prescribed in our Opinion and order for compliance with its provisions, and Shrewsbury has filed a reply.

In its application NEES's principal argument centers on its proposal to offer a new wholesale rate called R–1 to Shrewsbury and other customers. The proposed new rate, which has been submitted to the Commission on August 26, 1964, embodies a demand charge of $3.17 per month per kw and an energy charge of 7.0 mills per kwh for the first 4,000,000 kwh delivered during the month and 6.5 mills per kwh for amounts in excess. The rate is higher than NEPCO's W–3 rate which we prescribed for service to Shrewsbury, and is in excess of the W–4 successor rate also proposed by NEPCO and submitted on the same date as R–1. The W–3 rate provides for a monthly demand charge of $2.95 per kw of billing demand and an energy charge of 6.4 mills per kwh while the W–4 rate provides for a demand charge of $2.86 and an energy charge of 6.2 mills. According to NEES, the proposed R–1 rate consists of the W–4 rate plus a rolled-in facilities charge involved in reaching wholesale customers beyond NEPCO's interconnected generating and transmission system.

NEES contends that the proposed R–1 rate will permit Shrewsbury to have NEPCO wholesale service at the appropriate NEPCO wholesale rate, will guarantee treatment equal with Shrewsbury for the other Massachusetts resale customers and avoid numerous Section 202(b) applications from other towns. NEES also contends that it is desirable to treat uniformly all customers similarly situated and that Shrewsbury should not be treated differently because of its proximity to NEPCO's 69 kv lines.

Insofar as this case is concerned, we do not believe relevant the NEES proposal to offer all of the existing wholesale customers of Mass. Electric, including Shrewsbury, direct service from NEPCO pursuant to the proposed R–1 rate. We recognize, of course, that if NEPCO is to render direct service to all of Mass. Electric's resale customers, most of whom are located at considerably greater distance from NEPCO's high-voltage lines than is Shrewsbury, such deliveries might in the aggregate involve large costs not involved in sales by NEPCO directly off its high-voltage lines. Such costs would, of course, be part

of NEPCO's cost of service which it would be entitled to recover, along with a reasonable return, under the provisions of the Federal Power Act. We would be well disposed to a solution of NEPCO's rate problems which, instead of charging different wholesale customers different rates on the basis of their distance from the NEPCO high-voltage lines, would establish rates on a broad basis for all of NEPCO's wholesale customers similarly situated. Such rates would of course have to be shown to be just and reasonable, and non-discriminatory as between wholesale customers within and without the class to which the rates would be made applicable. However, the proposed R-1 rate does not at this time represent any rate filing purporting to be applicable to Shrewsbury since, by its terms, the proposed rate is applicable to the eligible customers only upon execution of a contract between NEPCO and such customers. We are not therefore called upon to determine here the question, upon which there is no evidentiary record, as to whether Shrewsbury properly would fall into the class to be established by the proposed new rate. Similarly we need not determine whether it and Mass. Electric properly should receive different rate treatment.

This is not a rate proceeding. In our Opinion and order we required NEPCO to serve Shrewsbury under the W-3 rate because that was NEPCO's only wholesale rate which was then and is now being employed, and we were of the opinion that Shrewsbury had demonstrated it was entitled to direct wholesale service from NEPCO. Whatever may be the appropriate rate or tariff filings to solve the other cost and rate problems of NEPCO or NEES under the Federal Power Act, and whatever the possible future application of such filings to Shrewsbury, there is no justification in the interim for depriving Shrewsbury of the benefits of our order obtained as the result of these proceedings. Similarly, we see no justification for granting the stay requested by NEES.

NEES contends that we wrongly required NEPCO to purchase or pay for the use of Mass. Electric's facilities in the Shrewsbury substation used to effect delivery to Shrewsbury and other facilities used to "firm up" this service. It will be recalled that we rejected Shrewsbury's request that NEPCO be required to serve it at 69 kv but required NEPCO to provide firm service at 13.8 kv to Shrewsbury whose facilities are directly adjacent to those of the NEES system. In doing so NEPCO was permitted but not required to use the Mass. Electric facilities presently being employed for this service. In our opinion it is the responsibility of the NEES system to make delivery to Shrewsbury and to install whatever facilities are necessary to insure that this service meets ordinary standards of reliability.

There are several other objections made by NEES. These, in our opinion, have largely been met by our original Opinion and order. We may note, however, NEES's contention that the Commission's reservation of jurisdiction over NEPCO is not authorized by the Act in connection with proceedings involving Section 202(b) and is in conflict with Section 207. Section 202(b) broadly provides that the Commission may prescribe the terms and conditions of the arrangement to be made between the persons affected. Because the record did not support Shrewsbury's request for immediate service from NEPCO at 69 kv but indicated a possible need for such service in the future we provided that the record remain open so that this aspect of the arrangement between the parties could be modified without delay. Section 207, in our opinion, is a separate method of requiring adequate service where there is involved no question of an interconnection.

NEES further argues that in acting under Section 202(b) we could not properly cancel the power contract between Shrewsbury and Mass. Electric. This is clearly part of the terms and conditions of the arrangement between the parties

subject to that section. In fact it might be impossible, as here, to order an interconnection without cancelling a pre-existing contract.

NEES further objects that we adopted the initial decision of the presiding examiner "to the extent not inconsistent herewith" and that it is unable to determine which portions have been adopted. We shall clarify and limit this statement in a new ordering clause below.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 438, or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and order except as specified below.

(2) NEES's application for extension of time for compliance should be denied.

The Commission orders:

(A) The application for rehearing filed by NEES with respect to our Opinion No. 438 and order is hereby denied.

(B) The motion for extension of time for compliance filed by NEES is denied.

(C) Paragraph (F) of our original order is amended to read as follows:

The findings of fact made by the examiner and his ultimate conclusions not inconsistent herewith are hereby adopted as part of this Opinion and order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-299

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 28, 1964)

On June 12, 1964, as supplemented on July 15, 1964, Cities Service Gas Company (Applicant) with its principal place of business at P.O. Box 1995, Oklahoma City, Oklahoma, filed in Docket No. CP64-299 an application pursuant to Section 7(b) of the Natural Gas Act for an order granting permission and approval to abandon by sale of two compressor units totaling 1,100 horsepower located at the plant site of Rounds and Stewart Natural Gasoline Company, Inc. (Rounds and Stewart), in Marion County, Kansas, all as more fully represented in the application in this proceeding.

The application states that Applicant was authorized in Docket No. CP61-184 to construct and operate a 7,100 horsepower compressor station with appurtenant facilities in the gasoline plant of Rounds and Stewart. This station was to be used both on the intake and outlet sides of the plant to compress and transport to Applicant's Hugoton mainline system approximately 24,600 Mcf per day of natural gas at 14.65 psia. The station as constructed comprised three 2,000 horsepower units, one 660 horsepower unit and one 440 horsepower unit. It was designed to operate on a multistage basis, compressing gas from the surrounding fields at low field intake pressure, by three stages of compression, to the plant, and from the plant, by the fourth stage of compression, to Applicant's 8-inch pipeline at pressures necessary to meet the mainline system pressure of approximately 818 psig.

The application further states that during the initial periods of the operation of this plant, natural gas in such volumes was available for delivery to Applicant, and the full capacity of the compressor station was used in compressing the gas. However, the volume of gas from the wells connected to the plant has substantially diminished and, accordingly, the volume of gas available to Applicant has been reduced to 12,300 Mcf per day. Only such reduced volumes will be available for delivery to Cities during the balance of the 20-year life of the contract between Rounds and Stewart and Applicant. As a result of this reduction in volumes of gas to be compressed and transported, the full capacity of this compressor station is no longer needed to handle the gas delivered heretofore. The 660 horsepower unit and the 440 horsepower unit are no longer necessary in Applicants' operation there. The remaining capacity of the station, *i.e.* 6,000 horsepower, is and will be adequate to handle such reduced volumes of gas.

Applicant is advised by Rounds and Stewart that it intends to use the 1,100 horsepower sought to be abandoned, in processing volumes of gas belonging to an intrastate pipeline company. Exhibit V to Applicant's application indicates that under the operating conditions depicted, the total horsepower required by the Rounds and Stewart plant is 3,520. After the sale of the proposed 1,100 horsepower the remaining total horsepower will be in operation at various times due to fluctuations in operating conditions. If cause for usage of the full 6,000 remaining horsepower does not increase within the next year, consideration will be given to installing some of it in new and needed locations, or selling it to Rounds and Stewart for use in a proposed gas recycling project. Applicant contends that the two units proposed to be sold represent an original investment of $263,407.16, a depreciated investment of $237,750.00 and a net salvage value of $167,883.00. Applicant would receive $200,000 for the units from Rounds and Stewart.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business P.O. Box 1995, Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The abandonment of the facilities as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission under the provisions of Section 7(b) of the Natural Gas Act.

(3) The abandonment of the proposed facilities by Applicant is required by the public convenience and necessity and the order granting permission to abandon these facilities should be issued.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Cities Service Gas Company, of the facilities as hereinbefore described in the application in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission in writing of the date of abandonment within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–258; PHILLIPS PETROLEUM COMPANY, DOCKET NO. CI64–918

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RELATED FPC GAS RATE SCHEDULE

(Issued September 28, 1964)

On April 29, 1964, as supplemented on July 27, 1964, El Paso Natural Gas Company (El Paso) filed in Docket No. CP64–258 an application pursuant to Section 7(c) of the Natural Gas Act (Act) for a certificate of public convenience and necessity authorizing the construction and operation of an additional 2700 horsepower compressor unit and necessary appurtenances at El Paso's Dumas Compressor Station, Moore County, Texas, all as more fully set forth in the application.

The purpose of the proposed facilities is to enable El Paso to receive and subsequently utilize some 40,000 Mcf of natural gas per day at 14.65 psia which El Paso has contracted to purchase from Phillips Petroleum Company (Phillips) in addition to gas presently being received from Phillips under other authorization. Delivery is to be taken at the discharge side of Phillips' Dumas Compressor Station.

The total estimated cost of the facilities proposed by El Paso herein is $895,000 which will be financed from current working funds, supplemented as necessary by short-term bank loans.

On February 14, 1964, Phillips filed in Docket No. CI64–918 an application pursuant to Section 7(c) of the Act for a certificate of public convenience and necessity authorizing the sale of the 40,000 Mcf of natural gas per day to El Paso as set forth above. Concurrently with its certificate application, Phillips filed its related rate schedule which has been designated Phillips' FPC Gas Rate Schedule No. 400.

After due notice, no petition to intervene, notice of intervention or protest to the granting of either of the two subject applications has been received.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in Docket No. CP64–258, as supplemented, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by El Paso are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(5) Applicant, Phillips Petroleum Company, a Delaware corporation having its principal place of business in Bartlesville, Oklahoma, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and is therefore a "natural-gas company" within the meaning of the Natural Gas Act.

(6) The sale of natural gas by Phillips as hereinbefore described and as more fully described in the application in Docket No. CI64-918 will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Phillips, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(7) The proposed sale of natural gas by Phillips to El Paso, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(8) Applicants El Paso and Phillips are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Phillips' related FPC Gas Rate Schedule No. 400 should be accepted for filing, effective on the date of initial delivery of natural gas thereunder, as hereinafter ordered.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities hereinbefore described, as more fully described in the application in Docket No. CP64-258, as supplemented.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facilities authorized by paragraph (A) above shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing the sale of natural gas by Applicant, Phillips Petroleum Company, to El Paso Natural Gas Company, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, as hereinbefore described and as more fully described in the application in Docket No. CI64-918.

(E) The certificate granted by paragraph (D) above is not transferable and shall be effective only so long as Phillips continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificate issued by paragraph (D) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Phillips. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to El Paso imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of the sale of natural gas subject to said certificate.

(G) The related Phillips Petroleum Company FPC Gas Rate Schedule No. 400 is hereby accepted for filing subject to the applicable Commission Regulations under the Natural Gas Act and shall be effective upon the date of initial delivery of natural gas thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP64-281

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On May 25, 1964, as supplemented on June 29, 1964, Florida Gas Transmission Company (Applicant) filed in Docket No. CP64-281 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to sell and deliver natural gas on a direct preferred interruptible basis to International Minerals & Chemical Corporation (International) and on a direct firm and preferred interruptible basis to Ammonia, Inc. for use in their respective chemical and ammonia plants located at Bonnie, near Mulberry, Florida, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate approximately 1152 feet of 4½-inch pipeline extending from Applicant's existing 8-inch Sarasota lateral line in Polk County, Florida, in a general westerly direction to said plants, together with the necessary metering and regulating facilities to render the proposed service.

Natural gas will be used by International for the production of diammonium phosphate to be marketed to the commercial fertilizer industry, and Ammonia, Inc., will use natural gas for the production of the ammonia used in International's processing operations.

The estimated maximum daily and annual deliveries to International are 4,000 M^3Btu and 1,095,000 M^3Btu, respectively, and to Ammonia, Inc. are 7,000 M^3Btu and 2,044,000 M^3Btu, respectively. Of the volumes proposed for Ammonia, Inc. 900 M^3Btu per day and 328,500 M^3Btu annually will be sold on a direct firm basis.

The estimated cost of the proposed facilities is $34,000, which cost will be financed from cash on hand.

By letter, dated August 7, 1964, Applicant was issued a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G-9262 and G-9060 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized hereinafter should be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

(7) The certificate issued hereinafter should not entitle Ammonia, Inc. to whom firm deliveries are authorized hereinafter to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Florida Gas Transmission Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

(D) This certificate shall not entitle Ammonia, Inc. to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HOPE NATURAL GAS COMPANY, DOCKET NO. CP64-119; MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP64-133

ORDER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On May 4, 1964, Hope Natural Gas Company (Hope), 445 West Main Street, Clarksburg, West Virginia, and Mississippi River Fuel Corporation (Mississippi River), 9900 Clayton Road, St. Louis, Missouri, filed a joint motion to amend the order of the Commission issued April 2, 1964, in Docket Nos. CP64-119 and CP64-133, granting certificate authorizations to Hope and Mississippi River, respectively, so as to delete therefrom Finding No. 6, and to modify the wording of Ordering Paragraphs (B) and (F) therein, all as more fully set forth in the application to amend.

The said joint motion requests that Finding No. 6 reading as follows be deleted from the Commission's order issued April 2, 1964, 31 FPC 757:

> (6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Hope and Mississippi River complying with the conditions of this order and all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations;

that Ordering Paragraph (B) be modified so as to read as follows:

> The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission;

and that Ordering Paragraph (F) be modified so as to read as follows:

> The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicants. Further, our action in

this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved.

The joint motion to amend states that Hope and Mississippi River are primarily interstate pipeline companies, but insofar as the particular certificated authorizations are concerned and the operations certificated thereby the Applicants are for all practical purposes independent producers.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 2, 1964, in Docket No. CP64–119, *et al.*, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 2, 1964, in Docket No. CP64–119, *et al.*, be and the same is hereby amended so as to delete therefrom Finding No. 6, as set forth hereinbefore, and to modify Ordering Paragraphs (B) and (F) therein so that the same will read hereinbefore.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP64–286

ORDER AMENDING ORDER ISSUED SEPTEMBER 10, 1964

(Issued September 28, 1964)

It appears that the order of the Commission issuing a certificate of public convenience and necessity and permitting and approving abandonment in the above-entitled proceeding inadvertently included a wrong reference in ordering paragraph (E) which should be corrected forthwith.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission issued September 10, 1964, *supra*, p. 723 in Docket No. CP64–286 be amended as hereinafter ordered.

The Commission orders:

(A) The present ordering paragraph (E) in the order of the Commission issued September 10, 1964, in Docket No. CP64–286 is hereby deleted and the following paragraph (E) inserted in its place:

(E) The certificate issued by paragraph (A) above is granted on the express condition that the additional interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Kansas-Nebraska Natural Gas Company, Inc. for firm resale service to its customers.

(B) In all other respects, said order issued September 10, 1964, in Docket No. CP64–286 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LOUISIANA NEVADA TRANSIT COMPANY AND ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP64-291

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On June 4, 1964, Louisiana Nevada Transit Company (Louisiana Nevada) and Arkansas Louisiana Gas Company (Arkansas Louisiana) (sometimes hereinafter referred to jointly as Applicants) filed in Docket No. CP64-291 a joint application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the exchange of natural gas, all as more fully set forth in the joint application.

The exchange of natural gas will be at three proposed points of interconnection between Applicants' respective main transmission systems in Hempstead, Lafayette and Howard Counties, all in Arkansas. Additionally, Applicants request authority to construct and operate metering and interconnecting facilities at the foregoing described points of interconnection.

Applicants have entered into an exchange arrangement providing for Louisiana Nevada to take deliveries of gas on a temporary basis while it is effecting repairs and replacements on its pipeline system. The application indicates that the exchange will involve delivery to Louisiana Nevada of approximately 200,000 Mcf of gas at a pressure base of 14.65 psia and will cover a period of approximately 60 days. Louisiana Nevada will return equivalent volumes of natural gas to Arkansas Louisiana as soon as practicable and upon completion of such redeliveries the facilities will be disconnected.

Applicants state that the proposed exchange will be made only when gas is available at the points of delivery consistent with the requirements of the Arkansas Louisiana system.

The total estimated cost of the facilities is $3,500, which cost will be paid by Louisiana Nevada.

By letter, dated August 6, 1964, Applicants were issued a temporary certificate authorizing the proposed exchange and limiting such exchange to a period of 60 days.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the joint application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the joint application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Louisiana Nevada Transit Company, a Nevada corporation having its principal place of business in Ada, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by

the Commission in its order of October 20, 1942, in Docket No. G-246 (3 FPC 837).

(2) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G-252 (3 FPC 910).

(3) The facilities hereinbefore described, as more fully described in the joint application in this proceeding, are to be used in the exchange and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed exchange and delivery of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the proposed exchange and delivery of natural gas by Applicants are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(7) The exchange hereinafter authorized should be permitted only when it will not impair service to Arkansas Louisiana's other customers and should be limited to a period of 60 days from August 6, 1964, the date of issuance of the temporary certificate. Arkansas Louisiana should inform the Commission of the date of commencement of exchange deliveries and the date of completion of exchange deliveries within 10 days of each respective date. Further, the final report should also state the total quantity of gas exchanged.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Louisiana Nevada Transit Company and Arkansas Louisiana Gas Company, to construct and operate the proposed facilities and to exchange and deliver natural gas as hereinbefore described, all as more fully described in the joint application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(C) The exchange authorized in paragraph (A) above shall be permitted only when it will not impair service to Arkansas Louisiana's other customers and shall be limited to a period of 60 days from August 6, 1964, the date of issuance of the temporary certificate. Arkansas Louisiana shall inform the Commission of the date of commencement of exchange deliveries and the date of completion of exchange deliveries within 10 days of each respective date. Further, the final report shall also state the total quantity of gas exchanged.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS PIPELINE COMPANY, DOCKET NO. CP64–274; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–275

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On May 13, 1964, as supplemented on June 24, 1964, Northern Natural Gas Pipeline Company (Pipeline), 2223 Dodge Street, Omaha, Nebraska, 68101, filed in Docket No. CP64–274 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an 8-inch side valve on its 12-inch transmission line in Sutton County, Texas, and the transportation of natural gas for Northern Natural Gas Company (Northern) from said point to a redelivery point on Northern's system in Schleicher County, Texas, all as more fully set forth in the application.

On May 13, 1964, Northern Natural Gas Company (Northern), 2223 Dodge Street, Omaha, Nebraska, filed in Docket No. CP64–275 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of transmission pipeline facilities in Sutton County, Texas, extending from a new gas supply area in the South Sonora Field in Sutton County, Texas, to a point of connection with Northern Pipeline's transmission line in Sutton County, Texas, and (2) the transportation of natural gas from said field to the point of delivery on Pipeline's line, all as more fully set forth in the application.

Northern has contracted for an additional supply of gas located in the South Sonora Field in Sutton County, Texas (116,964 Mcf) which it proposes to connect to its system by means of (a) new facilities consisting of 11.3 miles of 10-inch, 8-inch and 4-inch lines together with five 4-inch measuring stations and one 6-inch meter run and dehydration and processing plant to be constructed in Sutton County, Texas, and (b) by utilizing the pipeline system of Pipeline, its subsidiary, and the new facilities proposed by the subsidiary in Docket No. CP64–274.

The estimated cost of facilities proposed by Pipeline and Northern is $2,520 and $387,660, respectively, all of which will be defrayed from the current funds of the respective companies.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the applications and exhibits, as supplemented, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Northern Natural Gas Pipeline Company, a Texas corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 6, 1963, in Docket No. CP61–5 (29 FPC 890).

(2) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(3) The proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the applications and exhibits as supplemented in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Pipeline and Northern are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Pipeline and Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Pipeline and Northern in these proceedings, authorizing the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the applications, as supplemented, and exhibits filed in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Pipeline's and Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-154

FINDINGS AND ORDER DISMISSING APPLICATION

(Issued September 28, 1964)

On November 25, 1960, as supplemented on December 9, 1960, Southern Natural Gas Company (Applicant) filed in Docket No. CP61-154 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas, on an interruptible basis, to Texas Eastern Transmission Corporation (Texas Eastern) at two exist-

ing points of interconnection between the two pipeline systems near Lucky, Bienville Parish, Louisiana, near Kosciusko, Attala County, Mississippi.

On January 9, 1961, Applicant was issued a temporary certificate authorizing it to sell up to 35,278,000 Mcf of natural gas, on an interruptible basis, for the period extending through December 31, 1962. Applicant agreed to accept a permanent certificate authorizing the sale of the before mentioned maximum volume of natural gas for the limited period ending December 31, 1962.

On December 17, 1962, the Commission by its order issued in Docket No. CP61–206 authorized Applicant to sell and deliver to Texas Eastern a contract quantity of 40,000 Mcf of natural gas per day at Kosciusko, Mississippi.

In view of the authorization in Docket No. CP61–206 to sell to Texas Eastern a contract quantity of 40,000 Mcf of natural gas per day and in view of the termination on December 31, 1962, of the sale of natural gas to Texas Eastern still pending permanent certification in Docket No. CP61–154, it appears that the application in Docket No. CP61–154 should be dismissed as moot.

The Commission finds:

The application for a certificate of public convenience and necessity filed in Docket No. CP61–154 should be dismissed as moot.

The Commission orders:

The application for a certificate of public convenience and necessity filed in Docket No. CP61–154 be and the same is hereby dismissed as moot.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65–2

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On July 1, 1964, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP65–2 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing additional firm pipeline service to seven existing customers, initial storage service to one existing customer and additional volumes of natural gas, on an interruptible basis, to Owens-Corning Fiberglas Corporation (Owens-Corning), all as more fully set forth in the application.

Specifically, Applicant proposes the following additional service:

Customer	Rate Schedule	Mcf per day at 14.7 psia
Manufacturers Light & Heat Company, The (Muncy)	CD–3	1,100
Public Service Company of North Carolina, Inc.	CD–2	3,000
Manufacturers Light & Heat Company, The (New Village)	G–3	100
Elberton, Georgia, City of	G–1	200
Social Circle, Georgia, City of	G–1	181
Butler, Alabama, City of	OG–1	125
Hartwell, Georgia, City of	OG–1	250
Total proposed additional firm pipeline service		4,956
Greenwood, South Carolina, City of (Initial storage service)	GSS	800
Owens-Corning Fiberglas Corporation (Interruptible industrial)		1,250

Applicant states that the proposed additional firm pipeline and storage service is necessary to meet the requirements of Applicant's customers commencing with the 1964–65 winter season. Owens-Corning will utilize the proposed additional gas for its expanded production of fiberous glass products at its Anderson, South Carolina, plant.

No new facilities will be required to make the proposed deliveries since Applicant has the necessary excess capacity as a result of its system expansion authorized in Docket No. CP64–96.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The sales, transportation and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce, subject to the jurisdiction of the Commission, and the proposed sales, transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized therein should be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to sell, transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sales, transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by pargaraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP63-290; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-291

FINDINGS AND ORDER AFTER STATUTORY HEARING AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On June 24, 1963, Northern Natural Gas Company (Northern), and on July 6, 1963, Transwestern Pipeline Company (Transwestern) filed in Docket Nos. CP63-291 and CP63-290 respectively, applications to amend the order issued October 10, 1963, 30 FPC 997, in the aforementioned dockets and extend for one year their "best efforts" gas exchange authorized by said order, all as more fully represented in the application in this proceeding.

The applications state that the exchange of gas is in accordance with an agreement between Northern and Transwestern dated April 12, 1963, wherein Transwestern agreed to deliver to Northern an average daily volume of 30,000 Mcf of natural gas for an initial period of one year with a "best efforts" agreement to increase the average daily volumes to 40,000 Mcf per day. Northern has the option to take like volumes for an additional year immediately following final delivery of the initial volumes. Northern has exercised its option to continue taking volumes for the second year commencing August 1, 1964, and the parties herein seek authority permitting the exchange of gas for an additional year, but as amended in the manner described in the following paragraph.

Northern and Transwestern have signed an amendment dated May 1, 1964, to the original exchange agreement of April 12, 1963, which reduces the minimum annual volume of gas equivalent to an average daily volume of 10,000 Mcf with a daily minimum of 5,000 Mcf during the second year. Northern would continue to use its best efforts to increase the volumes of gas exchanged to an average volume for the year of 40,000 Mcf per day.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's

order, issued October 10, 1963, in Docket Nos. CP63–290 and CP63–291 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued October 10, 1963, in Docket Nos. CP63–290 and CP63–291 be and the same is hereby amended by authorizing Transwestern Pipeline Company and Northern Natural Gas Company respectively, to exchange natural gas for an additional year pursuant to an agreement dated April 12, 1963, as amended May 1, 1964, between both applicants, all as hereinbefore described and as set forth in the subject applications.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65–6

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On July 6, 1964, as supplemented on July 15, 1964, Transwestern Pipeline Company (Applicant) filed in Docket No. CP65–6 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a 1,000 horsepower gas turbine compressor at its Keystone Compressor Station, located in Winkler County, Texas.

The purpose of the proposed facilities is to enable Applicant, during off-peak periods of operation, to make up under-production of gas with equal over-production of gas in the West-Texas area so as to balance the takes from the gas fields involved, all as more fully described in the application. The present system does not permit Applicant to take gas ratably and the new facilities will cure this defect in its system and afford better service to its customers.

The estimated total cost of the proposed facilities is $221,000, which will be financed from current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct and operate the proposed facilities, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (4) and (e) of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-301

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On June 15, 1964, as supplemented on July 2, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-301 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the enlargement and operation of certain measuring and regulating facilities serving the Clarke-Mobile Counties Gas District, located in Mobile County, Alabama, all as more fully represented in the application in this proceeding.

Applicant proposes to enlarge and operate certain orifice measuring and regulating facilities serving the Clarke-Mobile Counties Gas District, located in Section 13, Township 1 South, Range 1 West, Mobile County, Alabama. Applicant states that the facilities are being enlarged in order to provide for the sale and delivery of natural gas on a firm basis to Allied Paper Corporation (Allied), of Mobile County, Alabama, to meet the fuel requirements for the operation of purchaser's pulp mill located at Jackson, Clarke County, Alabama.

Allied is presently engaged in constructing a pulp mill and the proposed enlargement of facilities and their operation will permit Applicant to supply Allied with a dependable source of fuel for the operation of the mill. Applicant's existing pipe lines through which this gas will be transmitted have adequate

capacity to handle the additional quantities of gas to be sold to Allied, however, it is necessary to increase the capacity of the existing meter station and regulating facilities through which the gas will be delivered. Applicant will sell the gas to Allied at its Clarke-Mobile Counties Gas District meter station, as enlarged, and the Gas District will transport the gas for Allied from the meter station to its plant near Jackson.

Applicant further states that the enlargement of the facilities will cost $2,284 and that during the third year of the contract it will sell and deliver to this customer approximately 1,575,000 Mcf of natural gas. Applicant intends to finance the cost of the proposed project out of its current working funds.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business at 1525 Fairfield Avenue, Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) This certificate should not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed natural gas facilities as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the gen-

eral terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized in paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-22

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 28, 1964)

On July 20, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-22 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove sixteen Hope Type VSA 160 horsepower compressor units and the Jackson Compressor Station No. 1, located in Rankin County, Mississippi.

Applicant shows that since October 23, 1955, the above described facilities have not been used because of substantial changes in its system wherein the flow of natural gas from South Louisiana to the McComb and Jackson areas and from the Baxterville Field to the Hattiesburg area has displaced the flow of gas through the Sterlington to Jackson pipeline for deliveries in the McComb and Hattiesburg areas where the facilities to be abandoned had functioned since 1939, all as more particularly described in the application.

No cessation or interruption of service to customers will result from the proposed abandonment and removal.

The current depreciated cost of the facilities to be abandoned is $117,599 of which $5,155 will be salvaged and the balance written off.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by United Gas Pipe Line Company of the facilities hereinbefore described be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment and removal within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED NATURAL GAS COMPANY, DOCKET NO. CP64-262

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 28, 1964)

On April 29, 1964, United Natural Gas Company (Applicant), 308 Seneca Street, Oil City, Pennsylvania, filed in Docket No. CP64-262 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation and operation of an additional 300 Hp compressor unit and connecting facilities at Applicant's Medix Run Field Compressor Station in Benezette Township, Elk County, Pennsylvania, all as more fully set forth in the application.

Applicant is presently operating its Medix Run Field Compressor Station for the purpose of applying suction on producing gas wells in that area and compressing such produced gas for discharge into Applicant's Line F-M 100. Due to increased operating pressures being maintained in Line F-M 100 Applicant now requires a two-stage compressor operation in order to discharge said natural gas into Line F-M 100, instead of the single stage unit now utilized. In addition, the proposed unit will enable Applicant under emergency conditions to maintain the station in operation in the event the present compressor becomes inoperable.

Applicant proposes to take a presently available unused 300 Hp compressor unit from a field compressor station in Potter County, Pennsylvania, and relocate it in the Medix Run Field Compressor Station for use as stated. The estimated cost of the installation of the compressor unit and the construction of connecting facilities is $4,830, which will be defrayed from current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G-328 (3 FPC 959).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, United Natural Gas Company, authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY,* DOCKET NO. CP64-115, ET AL.

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RELATED FPC GAS RATE FILINGS

(Issued September 29, 1964)

On November 21, 1963, Colorado Interstate Gas Company (CIG) filed in Docket No. CP64-115 an application pursuant to Section 7(c) of the Natural Gas Act (Act) for a certificate of public convenience and necessity authorizing the construction and operation of approximately 4.5 miles of 4- and 6-inch gathering lines, and dehydrating, metering and regulating facilities necessary to attach approximately 15,585 MMcf of recoverable natural gas reserves to be purchased from three producers who have filed applications for authorization to make the related sales, in the Wamsutter Field in Sweetwater County, Wyoming, and to deliver such gas into CIG's existing 22-inch Wyoming transmission line, all as more fully set forth in the application.

*And other Applicants listed herein at p. 872.

The total estimated cost of the facilities proposed under Docket No. CP64–115 is $90,600, which will be financed out of current working funds.

On January 27, 1964, as supplemented on March 16, 1964, CIG filed in Docket No. CP64–166 an application pursuant to Section 7(c) of the Act for a certificate of public convenience and necessity authorizing the construction and operation of one main line valve and one check meter station to enable CIG to receive at its main transmission line natural gas from a proposed gathering system in Desert Springs Field in Sweetwater County, Wyoming, where CIG has contracted to take gas reserves of approximately 119,573 MMcf to be purchased at the wellhead from nine producers who have filed applications for authorization to make the related sales.

The total estimated cost of the facilities proposed under Docket No. CP64–166 is $15,650, which will be financed out of current working funds. CIG's related proposed gathering system is estimated to cost $1,362,800.

Each of the producer Applicants listed herein has filed an application pursuant to Section 7(c) of the Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to CIG for resale in interstate commerce, all as more fully described in the respective applications.

Said producer Applicants have filed related FPC gas rate schedules and propose to initiate service to CIG as indicated in the tabulation herein. All sales certificated hereinafter are either equal to or below the area ceiling prices established by the Commission's Statement of Policy 61–1, as amended.

After due notice, no petition to intervene, notice of intervention or protest to the granting of any of the respective applications in these proceedings has been filed.

At a hearing held on September 25, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the applications in Docket Nos. CP64–115 and CP64–166, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by CIG are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by CIG are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(4) Public convenience and necessity require that the certificates hereinafter issued in Docket Nos. CP64–115 and CP64–166 and the rights granted thereunder be conditioned upon CIG's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of said Regulations.

(5) Each of the producer Applicants herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission or will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and

will therefore be a "natural-gas company" within the meaning of said Act upon the commencement of the service under the respective authorizations granted hereinafter.

(6) The sales of natural gas hereinbefore described, as more fully described in the respective producer applications herein, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(7) The sales by the respective producer Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(8) All Applicants herein are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) The respective related producer rate schedules not heretofore accepted by the Commission should be accepted for filing.

The Commission orders:

(A) Upon the terms and conditions of this order, certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the facilities to take natural gas from producers thereof as hereinbefore described and as more fully described in the applications and exhibits in Docket Nos. CP64–115 and CP64–166.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon CIG's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be completed by CIG and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the respective sales to Colorado Interstate Gas Company by the respective producer Applicants herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore described and as more fully described in the respective producer applications and exhibits in these proceedings.

(E) The certificates issued by paragraph (D) above are not transferable and shall be effective only so long as the producer Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificates issued by paragraph (D) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this pro-

ceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to CIG imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(G) The grant of the certificate issued by paragraph (D) above is hereby conditioned upon each producer Applicant's filing of a contract amendment providing for an extension of the initial take and pay requirement from three years to five years.

(H) The certificates issued by paragraph (D) above to Socony Mobil Oil Company, Inc. in Docket No. CI64-287, to Humble Oil & Refining Company in Docket No. CI64-872 and to Gulf Oil Corporation in Docket No. CI64-1279 are hereby conditioned upon the filing of appropriate rate schedules by said three Applicants.

(I) The related FPC gas rate schedules set forth in the tabulation herein which have not heretofore been accepted by the Commission are hereby accepted for filing, to be effective on the date of initial delivery thereunder.

ORDER REQUIRING REPORT OF INTENDED DISPOSITION OF REFUNDS

(Issued September 29, 1964)

In our order issued July 8, 1964, 32 FPC 49, as amended by our order of August 7, 1964, 32 FPC 542, in Docket No. G-9287, *et al.*, we conditionally approved a rate settlement proposal filed by Humble Oil & Refining Company. That order stated that we considered it our duty in carrying out the mandates of the Natural Gas Act to assure, within the limits of our jurisdiction, that refunds made pursuant to the settlement are actually flowed through to the parties legally and equitably entitled thereto.

The order went on to state that:

> We are not here determining that a pipeline purchaser from Humble or one down the line in the chain of resales between the producer and ultimate consumer are never entitled as a matter of law or equity to retain all or part of the refunds received from a supplier. We conclude only that merely because a pipeline is under no special express requirement to flow refunds through to its customers and did not previously pass on to its customers the producer's price increase (or higher gas costs arising from sales temporarily certificated at prices higher than that fixed in the settlement), does not determine that it is entitled to retain such refunds. Unlike the corresponding refund provisions of the Federal Power Act (Section (205(e), 16 U.S.C. 824(d)) and the Interstate Commerce Act (Section 15(7), 49 U.S.C. 15(7)) which provided that refunds must be paid "to the persons in whose behalf such amounts [increased rates] were paid," Section 4(e) of the Natural Gas Act does not specify to whom refunds are to be paid. And in the *Federal Power Commission* v. *Interstate Natural Gas Company*, 336 U.S. 577, the Supreme Court rejected the claim that pipeline purchasers were the legal owners of funds placed in escrow pursuant to the terms of a judicial stay of a Commission directed rate reduction, merely because the fund was created from their payments at the previous higher rate. See also *Central States Company* v. *Muscatine*, 324 U.S. 138 (1945), (dissenting opinion).

In the paragraph immediately following, our order issued July 8, 1964, in Docket No. G-9287, *et al.*, set out the procedures we propose to follow to carry

[1] The docket number is assigned for identification purposes only and is not intended as a classification of the company for other purposes.

out our indicated policy. That paragraph and the procedures therein provided are incorporated herein.

It appears from the terms of the settlement between the parties and the appendices attached to our order issued July 8, 1964, that each of the companies listed in the caption may receive refunds directly from Humble through this settlement. Accordingly, it is necessary and appropriate that these companies submit the report hereinafter required setting out their proposed disposition of the refunds they may receive under the settlement of Docket No. G–9287, *et al.*, as indicated in the report served upon them by Humble.

The Commission orders:

(A) The natural gas companies listed in the caption (except Humble) shall submit, in their respective docket, within ten days of the issuance of this order, the report required by the paragraph of our order issued July 8, 1964, in Docket No. G–9287, *et al.*, incorporated herein and shall serve such report upon its customers and the interested state commissions.

(B) Any of the above companies claiming the right to retain any portion of the amount it may receive from Humble, shall submit, in addition to the above report, a detailed statement of the legal and equitable basis for such claim.

(C) Pending further order of the Commission, Humble shall retain the amounts to be refunded in accordance with Paragraphs (F), (G) and (H) of our order of July 8, 1964, as amended by our order of August 7, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ORDER DENYING MOTION FOR AMENDMENT OF MORATORIUM CONDITION

(Issued September 29, 1964)

The applicants designated above (hereinafter referred to collectively as "Hunt") filed on May 14, 1964, a motion setting forth their basis for factual disagreement as to the three highest effective rates in Texas District Nos. 2, 3, and 4. Based thereon, Hunt requests modification of the price moratorium provision imposed in the order issued February 24, 1964, 31 FPC 447, in the above-entitled proceedings and confirmed on April 17, 1964, 31 FPC 946, in an order denying rehearing. As explained in the April 17 order, the lowest of the three highest effective rates in each area formed the basis for the price moratorium provision which was included as a condition to the issuance of the certificate authorizations to Hunt. The price moratorium precludes the filing of any price increases in excess of 18¢ per Mcf for sales in District Nos. 2 and 4 and 19¢ per Mcf in District No. 3 pending the issuance of a final decision in the Texas Gulf Coast Area Rate Proceeding, Docket No. AR64–2, or until January 1, 1968, whichever is earlier.

Hunt in its motion claims that 19¢ is not the lowest of the three highest prices in District No. 3. Hunt refers to a number of proposed increased rates of

19.33333¢ and 19.11402¢[1] per Mcf that have been filed and suspended until June 1, 1964, to support its position that the price moratorium for sales in District No. 3 should be higher. Some of the producers have placed the above proposed rates in effect, subject to refund, in accordance with the provisions of Section 4(e) of the Natural Gas Act. Hunt fails to mention, however, that these increased rate filings are themselves redetermination rates based in part on the 20¢ initial contract rates of Hunt involved in Opinion No. 412 to which this order relates. Specifically, the 19.33333¢ (and 19.11402¢) rates were arrived at by dividing the total of the rates for the following sales by three:

sale (by applicants) to Natural Gas Pipeline Company of America	20.0¢ per Mcf
sale to Trunkline Gas Company	20.0¢ per Mcf
sale to United Gas Pipe Line Company	18.0¢ per Mcf

In Opinion No. 412, 30 FPC 1438, we held that the in-line price prior to the policy statement for sales in District No. 3 was 16¢ per Mcf. Certificates were issued to applicants for sales in this area conditioned at a total initial price not in excess of 16¢ and applicants were required to refund any amounts collected in excess of 16¢ for the period of time sales were made under temporary authorization. In Opinion No. 412–A, 31 FPC 181, we stayed our initial price determination and refund requirement pending judicial review. The refund requirement, subject to court approval, will encompass the period during which the redeterminations involved here were reached.

In these circumstances the redetermination rates were properly filed, since applicant's 20 cent rates were then effective. However, a substantial question exists as to whether there is a valid contractural basis for the redetermination rates to the extent that they depend upon the 20 cent rates of applicants. See *Shell Oil Co.*, Opinion No. 382 and 382–A, 29 FPC 498, 851; *Texaco Inc., et al.*, Docket No. G–17613, *et al.*, order issued February 10, 1964, 31 FPC 402. We need not here determine the contract question whether redetermined rates filed pursuant to clauses providing that the new rate should be based upon the three highest prices "being paid" in the area, are subject to reduction in the event one or more of the three triggering rates turns out to have been effectively lower during the critical period; this we must leave to a hearing in the proceedings on such rate increases. It is sufficient here to indicate that for purposes of imposing a moratorium against possible price increases above the triggering ceiling we cannot consider prices which are themselves based on a price we have held to be too high and which was the subject of a hearing on this question at the time of the redetermination. In fact the situation here well illustrates the mushrooming effect that an out-of-line price for a given sale may have on other sales in the area through redetermination clauses and clearly does not justify a bootstrap operation raising the moratorium level we had set.

Hunt also claims the Commission has discriminated against it as to the length of the price moratorium imposed because the Commission has certificated without limitation contracts permitting (1) in District No. 2 the filing of price increases up to 23¢ per Mcf prior to the end of 1964, (2) in District No. 3 the filing of price increases up to 20¢ prior to October 10, 1965, and (3) in District No. 4 the filing of price increases up to 22¢ prior to the end of 1964.

The sales relating to contractual increases to 23¢ in District No. 2 to which Hunt refers are being made pursuant to temporary authorization which prohibit rate filings in excess of 18¢ per Mcf. These sales are consolidated in the District

[1] The only difference between the 19.1142¢ and 19.33333¢ rates is that the former rates include a contract deduction for dehydration by the buyer.

No. 2 "in line" certificate proceeding in *Sinclair Oil & Gas Co., et al.*, Docket No. G–16760, *et al.* The only sale in District No. 4 under a contract permitting an increase as high as 22¢ prior to the end of 1964 is the one being made under E. M. Spencer's Rate Schedule No. 1. That sale was certificated in Opinion No. 422, 31 FPC 623, at an initial rate of 16.0¢ per Mcf with a moratorium provision prohibiting any rate filing in excess of 18.0¢ until January 1, 1968.

It is true, however, that certain producers in these areas may file for rate increases above the moratorium level determined here for Hunt. The situation to which Hunt refers is the result of the Commission's failure in previous certificate cases to impose any price moratorium conditions in certificate authorizations. This in no way, however, lessens the importance of imposing a price moratorium here, nor does it limit the type of price moratorium that should be applied. It merely means that it may be necessary to utilize other means of protecting the public should any of the cited producers file for a rate increase which might have an impact on price redetermination clauses in other producer contracts in these areas. In similar circumstances we have initiated a number of individual hearings involving producer rate increases in South Louisiana.[1] We would not hesitate to take similar action in these areas in the event the facts warrant such action. But we are not compelled by our past actions to follow this more complicated procedure here. It could as well be argued that because we had not previously placed conditions against price increases in temporaries we could not impose the condition approved in *F.P.C. v. H. L. Hunt, et al.*, 376 U.S. 515.

The Commission orders:

For the reasons set forth above, Hunt's motion filed on May 14, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E–7176

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 29, 1964)

By order issued September 15, 1964, *supra*, p. 767, in the above-entitled matter, the Commission authorized Pacific Power & Light Company (Applicant) to issue and sell at competitive bidding $30,000,000, principal amount of First Mortgage Bonds, due 1994, subject, among other, to the provisions set forth in paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

---

[1] See, for instance, *Southeastern Public Service Company*, Docket No. RI63–361, Opinion No. 425 issued April 21, 1964, 31 FPC 973; and *H. L. Hunt, et al.*, Docket No. RI62–467, *et al.*, Opinion No. 369 issued November 30, 1962, 28 FPC 897.

(ii) The Commission, by further orders, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on September 28, 1964, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Blyth & Co., Inc., White, Weld & Co. to purchase the proposed issuance of $30,000,000, principal amount of Bonds, for the price of 98.911 of principal amount, with an interest rate of 4⅝%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued September 15, 1964, in the above docket and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D), and (E) of the Commission's order issued September 15, 1964 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TURNBULL & ZOCH DRILLING CO., ET AL., DOCKET NO. G-17960, ET AL.

ORDER GRANTING APPEAL FROM RULING OF PRESIDING EXAMINER

(Issued September 29, 1964)

There is presently before us for consideration an appeal by Blanco Oil Company and Killam and Hurd from a ruling of the presiding examiner made at the second prehearing conference in this proceeding on September 2, 1964.

This consolidated proceeding was initiated by order of the Commission issued May 28, 1964 and involves 67 separate applications by some 52 producers, individually or as operator, for authority under Section 7 of the Natural Gas Act to sell gas in Texas Railroad District No. 4 to five pipelines[1] for resale in interstate commerce.

The presiding examiner has ruled that our March 4, 1964 order in *E. E. Fogelson, et al.*, Docket No. G-19013, *et al.*, 31 FPC 476, established a precedent which is

[1] The five pipelines are: Natural Gas Pipeline Company of America, Florida Gas Transmission Company, South Texas Natural Gas Company, Tennessee Gas Transmission Company, and Valley Gas Transmission, Inc.

binding upon him in this proceeding and, as a result, he is unable to order the issuance of a permanent certificate to any producer applicant whose pipeline purchaser does not have, at the time his initial decision issues, a permanent certificate to construct the necessary facilities required to receive and transport the natural gas now being, or to be, purchased from a producer herein. This result follows, he says, even though all the other public convenience and necessity requirements present in a Section 7 initial price case are met. Further, the examiner ruled that he could not issue a permanent certificate to a producer and condition the certificate upon the pipeline purchaser obtaining a permanent certificate.[3]

Blanco and Killam and Hurd contend that the examiner of the Commission can issue a permanent certificate to producers even though, at the conclusion of the instant hearing, the pipeline companies continue to operate under temporary certification while awaiting permanent authorization.

On this interlocutory review upon the examiner's certification, we conclude that it is proper to grant the appeal of Blanco and Killam and Hurd for the reasons expressed below.

The proceeding in *E. E. Fogelson, et al., supra*, involved applications by a number of producers under Section 7 of the Natural Gas Act to sell gas to Transwestern Pipeline Company (Transwestern) from acreage in the Panhandle areas of Texas and Oklahoma. There was no issue as to price, but an issue arose as to whether or not certain of the applications should be granted in the absence of permanent authority to Transwestern for the necessary facilities to receive the gas. The Commission ruled as follows:

> Under these circumstances we are unable to issue permanent certificates to the producers in these seven dockets at this time although temporary certificates will remain outstanding. The fact that the gas will flow into Transwestern's facilities permanently certificated in Docket No. G–14871 is immaterial, for the connecting facilities are not shown to be so. To grant permanent certificates to the producers now would be prejudging the proceedings in Transwestern's Docket Nos. G–20464, CP61–168 and CP62–160, even if we conditioned the certificates as proposed by Transwestern. Since the issuance of certificates in these seven dockets cannot be granted until permanent certificates are granted in G–20464, CP61–168, CP62–160, which are consolidated, we shall order the seven dockets severed from the present proceedings and consolidated with the proceedings in Docket No. 20464, *et al.*

It is apparent from this passage that the Examiner's interpretation of the *Fogelson* case was a reasonable one. In our opinion, however, some clarification of the scope of that order is desirable. To remove any uncertainty, we point out that the *Fogelson* rule as enunciated was not intended to be as broad as the examiner suggests. The *Fogelson* case is distinguishable from the instant proceeding on two substantive grounds:

(1) In *Fogelson*, Transwestern had not been granted permanent certificates and had specifically opposed the issuance of permanent certificates to the producers, and

(2) Transwestern's certificate applications were involved in a comparative hearing and the Commission was in the position of avoiding prejudgment of any of the issues in the contest.

In the instant proceeding, unlike *Fogelson*, the pipeline companies are not objecting to the granting of permanent certificates to the producers and the pending pipeline application is not involved in a competitive proceeding. We

[3] TR. 283–284.

conclude that it is neither reasonable nor practical to extend the *Fogelson* rule to the present case because there is no adequate reason for such an extension and because it could hinder sound regulation. In our view, it would be unjust to require a producer to come to hearing, prepare evidence and participate in a proceeding only to find that a certificate cannot issue prior to certification of its pipeline purchaser when there is no reason to question the need for the gas supply involved. This result, in circumstances like those involved herein, would not advance the orderly and expeditious disposition of the applications in question. Furthermore, it would become difficult to issue budget-type certificates to pipelines since issuance of such certificates presupposes permanently certificated supplies of gas.

The nature of the record indicates that it would be more practicable and in the interest of the effective administration of the Natural Gas Act, for the presiding examiner to proceed with consideration of the evidence and to issue a permanent certificate where the record so warrants. The producer, of course, is on notice that in the event permanent certification of facilities proposed by the pipeline purchaser is denied he will no longer have a market.

The Commission orders:

The appeal by Blanco Oil Company and Killam and Hurd in the above entitled proceeding from the ruling of the presiding examiner is hereby granted and the presiding examiner is directed to proceed in a manner consistent with the provisions of this order.

OPINION NO. 428–B

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63–1

OPINION AND ORDER REJECTING APPLICATION FOR REHEARING IN PART, DENYING REHEARING, AND DENYING STAY

(Issued September 30, 1964)*

Syllabus

1. Commission *rejects* pipeline's application for rehearing of supplementary opinion to extent it repeats verbatim application for rehearing of basic opinion. P. 880.
2. Proposal to use actual figures for locked-in period would invite a multiplicity of rate filings—disposition of instant case would be greatly delayed if record were left open to receive such figures since new set of figures would require further hearing and cross-examination after end of period. P. 880.
3. Commission *rejects* application, in part, and *denies* rehearing and stay.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

BLACK, *Commissioner:*

On September 10, 1964, United Gas Pipe Line Company filed an application for rehearing of our Opinion No. 428–A and order issued September 2, 1964, *supra*, p. 687, on rehearing in the above-entitled proceeding. This opinion was issued after we had granted rehearing with respect to our original Opinion No. 428 and order 31 FPC 1180, for purposes of more orderly and more adequate

---

*Order issued October 22, 1964, rejecting and denying application for rehearing, 32 FPC 1163. See settlement order issued December 23, 1964, 32 FPC 1515. Set aside, *United Gas Pipe Line Co.* v. *F.P.C.*, 357 F. 2d 230 (CA5–1966); affirmed —— U.S. —— (1967).

consideration. In Opinion No. 428–A we confirmed with certain modifications Opinion No. 428, which determined the cost of service and rates of United, and we reissued the ordering clauses to carry these modifications into effect.

United's present application for rehearing repeats verbatim most of its application for rehearing filed June 11, 1964, with respect to Opinion No. 428. In addition to this United adds further arguments on questions discussed in our Opinion on rehearing. The greater part of United's application for rehearing is not properly addressed to the issues which can now be raised in this application, and accordingly, as provided in ordering clause (A) below, we reject United's application insofar as it essentially restates the matters raised in its application for rehearing filed June 11, 1964, with respect to Opinion No. 428. There are, however, several matters which may properly be raised and will be considered briefly.

In its original application for rehearing United questioned the derivation of the amount of $10,772,145 representing interest on debt for the purpose of computing income taxes. We explained that the figure was derived from the debt outstanding at the end of 1962 in the amount of $239,381,000 as shown in United's 1962 Annual Report to the Commission on Form 2. United now points out that the annual report shows actual interest for 1962 in the amount of $10,573,947 instead of $10,772,145. The lower figure reflects changes in the outstanding debt during the year. In our original Opinion we determined that it was more appropriate to use the debt outstanding at the end of the year. The amount of $10,772,145 represents the interest on that debt rounded off to a composite rate of 4.5 percent. However, if United wishes to compute the interest on each issue of bonds and notes at the applicable interest rates so as to arrive at the somewhat more accurate figure of $10,736,315, it may do so.

In the order accompanying Opinion No. 428–A we added a new paragraph (N) providing as follows:

> The obligations imposed on United by this order shall apply only to the period before the rates herein prescribed (and as modified by further filings required) are superseded by subsequent rates prescribed or approved by the Commission as the result of rate proceedings or settlements.

United indicates that this paragraph restrains it in filing new rates and is beyond the power of the Commission. Paragraph (N) is a generalization of the same provision found in paragraph (I) of our original order and is rather designed to limit the effects of our order. It has nothing to do with United's right or lack of right to file rate changes.

United argues that in accordance with the Commission's order issued August 24, 1964, 32 FPC 653, suspending United's increased rates in Docket No. RP65–1, there will be a "locked-in" period for the RP63–1 rates extending from January 1, 1963, to February 1, 1965, and that actual figures can be used for this period instead of the estimates used in Opinion Nos. 428 and 428–A. Such a proposal merely solicits relitigation of the issues here resolved, and would invite a multiplicity of rate filings. Further, in our opinion, it would greatly delay the disposition of Docket No. RP63–1 if the record were left open to receive the actual figures relating to this period, for a new set of figures would require further hearing and cross-examination after the end of the period. *Cf. State Corp. Comm. of Kansas v. F.P.C.*, 215 F. 2d 176 (CA8). In any case United has precluded any such course, or at least for some time, by filing petitions for review.

United has filed an application for a stay of the ordering paragraphs of Opinion Nos. 428 and 428–A. We think that United's application for a stay should be denied. A stay would harm its customers and would be contrary to

the public interest in just and reasonable rates. See *Virginia Petroleum Jobbers v. F.P.C.*, 259 F. 2d 921 (CADC). The accumulation of amounts to be refunded if a stay were granted does not provide satisfactory protection to the consumers who may be quite different at the time a refund is made from what they were at the time the rates were paid.

The Commission further finds:

(1) The portions of United's application for rehearing listed below should be rejected.

(2) The assignments of error and grounds for rehearing set forth in those parts of United's application for rehearing which are properly filed present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 428–A, or which having now been considered, warrant any change in, modification of, or rehearing of such Opinion and order, except as specified below.

(3) The motion and application of United for a stay of Opinion Nos. 428 and 428–A and accompanying orders should be denied.

The Commission orders:

(A) The following portions of United's application for rehearing filed September 10, 1964, are hereby rejected:

Page 1 last two lines through page 50 first two lines.

Page 51 third line through page 60 first two paragraphs.

(B) To the extent not rejected United's application for rehearing filed September 10, 1964, is hereby denied.

(C) In computing the rates and refunds as required in the order attached to Opinion No. 428–A, United may use the amount of $10,736,315 for tax deductible interest instead of the amount of $10,772,145 specified in Opinion Nos. 428 and 428–A.

(D) The motion and application of United for stay of Opinion Nos. 428 and 428–A and accompanying orders, pending judicial review, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CHATTANOOGA GAS COMPANY, COMPLAINANT v. EAST TENNESSEE NATURAL GAS COMPANY, DEFENDANT, DOCKET NO. RP65-3

ORDER INSTITUTING INVESTIGATION, PROVIDING FOR HEARING AND DESIGNATING PROCEDURE

(Issued October 1, 1964)

On July 29, 1964, Chattanooga Gas Company (Chattanooga) filed a formal complaint naming its sole supplier, East Tennessee Natural Gas Company (East Tennessee) as defendant. Citing Article I of its 1959 service agreement with East Tennessee and the latter's rate schedules G-2 (firm service) and I-1 (interruptible service) under which Chattanooga purchases gas, the complaint alleges, among other things; that the service agreement provides that Chattanooga shall not manufacture gas without East Tennessee's permission, nor purchase gas from sellers other than East Tennessee so long as requirements remain under 40,000 Mcf per day; that Chattanooga's present requirements are 31,500 Mcf per day; that to the extent the foregoing provisions constrict Chattanooga's freedom to contract for, and to purchase additional volumes up to 40,000 Mcf per day, from less costly sources of supply, said provisions conflict with the principal purpose of the Natural Gas Act; that the firm service rate presently charged by East Tennessee is so high as to preclude Chattanooga from meeting competition; that with respect to interruptible sales, Farmers Chemical Association, Inc. (Farmers Chemical), its largest industrial customer proposes to purchase its future requirements from a projected new pipeline owned by Georgia-Tennessee Gas Corporation (Georgia-Tennessee); that to date frequent interruptions of service in the supply of East Tennessee's gas have seriously reduced the revenues of Farmers Chemical by limiting its production of anhydrous ammonia and sales of products; and that Farmers Chemical now demands firm service instead of interruptible service and finds the cost of firm service from Georgia-Tennessee to be less costly than firm service derived from East Tennessee's gas available through Chattanooga. Complainant further alleges that unless it can obtain gas from East Tennessee under terms permitting it to compete with the proposed rates of Georgia-Tennessee, Chattanooga may lose its largest industrial customer and be obliged to seek increased rates from its remaining customers.

Chattanooga further states that it has entered into a precedent agreement with Southern Natural Gas Company (Southern) to acquire a firm supply of gas at rates substantially lower than those available from East Tennessee and that it proposes to sell such gas to Farmers Chemical and others; that this method of meeting competition however would be frustrated if the aforementioned provisions of Chattanooga's service agreement were construed as a limitation upon its freedom to obtain supplies in excess of 31,500 Mcf per day from sources other than East Tennessee; that if the aforementioned provisions of the service agreement so restrain Chattanooga from obtaining additional volumes of gas at lower rates from other suppliers, such restraint and the consequent lessening of competition would appear to violate Section 3 of the Clayton Act, 15 U.S.C.A. § 14; further, that preclusion of Chattanooga from additional volumes of gas at lower cost from another supplier would constitute undue discrimination against Chattanooga for the reason, among others, that

East Tennessee's proposed service agreement with Roanoke Gas Company in Docket No. CP64–21 does not restrain Roanoke by compelling it to make all future purchases from East Tennessee; that Chattanooga entered into the 1959 service agreement under duress and that the Commission did not grant East Tennessee an exclusive franchise for all future gas requirements of Chattanooga.

The complaint filed under Sections 4(a), 4(b) and 5(a) of the Act, requests, among other things, a public hearing and prescription of tariff provisions, rules, regulations, practices and a service agreement which are just, reasonable and not unduly discriminatory in relation to service to be rendered by East Tennessee to Chattanooga.

East Tennessee filed its answer to the foregoing complaint on September 8, 1964, setting forth a general denial of undue discrimination and stating in particular, among other things: that East Tennessee proposes to file by September 14, 1964, an application for authorization to serve Chattanooga with the volumes of gas necessary to meet the entire requirements of Farmers Chemical; that until the issues in that proceeding and those in pending application by Southern at Docket No. CP64–314 are decided, a public hearing herein would be premature; that East Tennessee was authorized to serve Chattanooga by Commission order in Opinion No. 163 (7 FPC 5) issued February 2, 1948, Docket No. G–889; that the Chattanooga market was absolutely essential to the feasibility of East Tennessee's proposal; that the fact of the denial of Southern's application to serve the same market evinced the conclusion that the market was too small to justify supplies from two pipelines; that Chattanooga purchased approximately 37% of East Tennessee's sales for resale and 21% of its total sales in 1963; that East Tennessee on April 1, 1964, made rate reductions equivalent to 6.5¢ per Mcf in firm service gas purchases by Chattanooga; that at no time in 1963 was Farmers Chemical completely curtailed; that Farmers Chemical does not demand firm service, but would be willing to take 65% firm, and 35% interruptible service which East Tennessee can furnish. Defendant further denies that its service agreement with Chattanooga was executed under economic duress and alleges that Chattanooga has a long history of agreeing to successive amendments of the initial service agreement since 1950, which culminated in the present one.

The pleadings leave unresolved substantial questions of fact and law bearing upon issues evoked by conflicting contentions concerning the service agreement, East Tennessee's tariff and the relative costs of gas; whether, among other things, Chattanooga is subject to undue discrimination and if so, the tariff provisions, rules and regulations the Commission should prescribe, pursuant to the provisions of the Act, for service to Chattanooga by East Tennessee. East Tennessee contends that a public hearing herein should be deferred on account of pending certificate proceedings. However, the complaint is filed under Sections 4 and 5 of the Act and while in some areas, the problems presented may have relationship with possible future developments in certificate proceedings, the allegations of the complaint, on the other hand, bear upon existing facts and conditions, and upon rates presently effective. It is our view, therefore, that pendency of certificate applications relating to future operations do not constitute a valid basis for deferring a public hearing on the complaint.

It appears that a public hearing should be held in order to afford all parties opportunity to present evidence concerning the issues herein; that Chattanooga has the obligation of adducing evidentiary support of its allegations and of going forward first in the presentation of its case-in-chief; that the issues

herein should be determined with the greatest possible expedition in conformity with Section 2.59(h) of the Commission's Rules of Practice and Procedure and to that end, each party should have the opportunity to understand and evaluate the positions of the other parties. All matters which can be fully resolved without formal trial should be eliminated from hearing and settled by stipulation.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the issues raised by the complaint filed by Chattanooga be set for public hearing and that the proceeding be expedited in accordance with the procedures set out below.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 5, 15, and 16 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a public hearing be held concerning the matters involved and the issues presented in this proceeding.

(B) At the hearing herein, the complainant, Chattanooga, shall have the obligation of going forward first with the presentation of its direct case-in-chief.

(C) Chattanooga shall serve the prepared testimony and exhibit constituting its case-in-chief, upon all parties on or before October 19, 1964.

(D) The defendant, East Tennessee, shall serve the prepared testimony and exhibits comprising its direct case upon all parties on or before November 13, 1964.

(E) The Commission staff and all other parties to this proceeding proposing to present evidence herein, shall serve their prepared testimony and exhibits on all parties on or before November 18, 1964.

(F) The Presiding Examiner shall set the date for the service of Chattanooga's rebuttal case and, if determined necessary and appropriate without unduly delaying the proceeding he may provide for filing of cross-rebuttal between the parties (including Staff) on a date prior to the date set for service of Chattanooga's rebuttal.

(G) Presiding Examiner Seymour Wenner or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see Delegation of authority, 27 F.R. 4276, etc.), shall preside at the prehearing conference and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedures, and as further provided by this order, shall set the date of hearing by notice thereof.

(H) Without limitation upon the authority of the Presiding Examiner to convene conferences prior to, or subsequent to the date herein fixed, pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner herein designated shall commence at 10:00 A.M. (EST) on November 23, 1964, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., 20426, for the purpose of effectuating the intent of the Commission as hereinabove set out.

(I) Notices and petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's Rules of Practice and Procedure, Sections 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)] on or before October 9, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER REOPENING THE RECORD AND FIXING ORAL ARGUMENT

(Issued October 1, 1964)

On July 31, 1964, the Presiding Examiner issued his decision in the above proceeding on application for license. Briefs on exceptions have been filed by certain parties, including the Town of Yorktown (Yorktown), Intervener, which objects to the decision in that it would permit a portion of the project transmission line to traverse Yorktown. In addition, Yorktown has moved that the hearings be reopened to permit it to introduce evidence of the effect on the community of the transmission line route. In explanation of its absence from sessions of the hearing at which testimony was heard on this subject, Yorktown states it had been led to believe that the route would bypass the Town except for a short stretch.

The Commission finds:

It is appropriate and in the public interest that oral argument be held before the Commission respecting the issues involved in this proceeding and that the record should be reopened as ordered hereafter.

The Commission orders:

(A) The record in the above-entitled proceeding is reopened to permit Yorktown to file with the Commission by November 2, 1964, and serve on staff counsel and parties of record, such written testimony as it deems relevant to the issue of the location and characteristics of the project transmission line.

(B) The Applicant may, by November 9, 1964, file with the Commission and serve on staff counsel and the parties its rebuttal testimony.

(C) Oral argument shall be held before the Commission at 10 a.m. (EST) on November 17, 1964, in the Hearing Room of the Federal Power Commission, 441 G Street NW., Washington, D.C., respecting the issues involved in this proceeding.

(D) Any party to this proceeding desiring to participate in oral argument shall advise the Secretary of the Commission on or before November 1, 1964, to that effect and shall state the amount of time it wishes for argument.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NEW ENGLAND POWER COMPANY

ORDER ACCEPTING RATE SCHEDULES EFFECTING RATE REDUCTIONS FOR FILING, DIRECTING STAFF INVESTIGATION AND SUBMISSION OF DATA

(Issued October 1, 1964)

On August 26, 1964, New England Power Company (NEPCO), Boston, Massachusetts, filed, pursuant to Section 205 of the Federal Power Act, proposed rate schedules for wholesale electric service to five customers, three of which are

affiliated companies, at a W–4 rate to supersede its present W–3 rate, and three customers at an R–1 rate. The proposed W–4 rate reduces NEPCO's demand charge from $2.95 to $2.86 per kw of billing demand per month, and decreases the accompanying energy charge from 6.4 mills per kwh to 6.2 mills per kwh. The proffered R–1 rate is a two-part rate, consisting of a demand charge of $3.17 per kw of billing demand per month and an energy charge of 7.0 mills per kwh for the first 4,000,000 kwh delivered during the month and 6.5 mills per kwh for amounts in excess thereof. Rates W–4 and R–1 are more fully identified and designated in attached Appendix A.

The recent rate schedule filings would effect an aggregate reduction of $2,135,918 in electric charges to NEPCO's present wholesale customers served by or through NEPCO and its corporate affiliates, chiefly Massachusetts Electric Company (Masselec). Rate W–4 provides direct service from the Company's interconnected generating and transmission system. Rate R–1 provides for service at wholesale from NEPCO to electric customers currently served by means of additional delivery facilities of NEPCO or its corporate affiliates, chiefly Masselec. The latter customers include 20 municipals,[1] 2 investor owned electric systems[2] and three operating districts of Masselec and Granite State Electric Company (Granite State), another corporate affiliate of NEPCO.

As filed, R–1 is applicable upon agreement to a two year contract service period. Contracts embodied in specific rate schedule submittals covering the three operating districts of Masselec and Granite State and reflecting the R–1 rate have been filed. If in addition, to those customers, the R–1 rate is accepted by Manchester Electric Company, Green Mountain Power Corporation (Stanford district) and by municipal systems currently served by Masselec, it would afford an aggregate reduction to those wholesale customers of $266,000 from charges of Masselec during 1963, a 4.3% reduction in those customers' 1963 purchased power expenses ($6,190,000).[3]

NEPCO's proposed W–4 rate would result in an annual reduction in revenue of $2,101,305, to NEPCO, or 3.1% to the five resale customers presently served under NEPCO's W–3 rate, Masselec, Granite State, Narragansett Electric Company, Fitchburg Gas and Electric Company and Littleton, New Hampshire.

Commission Opinion No. 438, issued July 27, 1964, 32 FPC 373, directed NEPCO to undertake direct service to the Municipal Light Department, Shrewsbury, Massachusetts, replacing Masselec, the Town's former supplier. This made it eligible for the W–3 rate then in effect and makes it eligible for the new W–4 rate. It is also eligible for the R–1 rate by the express terms of that schedule. As we indicated in our Opinion No. 438–A, there is a continuing question of classification involving not only Shrewsbury but at least some of NEPCO's other wholesale customers as well, which will eventually have to be resolved—namely, the basis for NEPCO having two separate rate schedules for wholesale service and, assuming the dual system is justified, which of its customers properly fall into each category. We shall give consideration to this question in our

---

[1] Ashburnham, Boylston, Danvers, Georgetown, Groton, Groveland, Holden, Littleton, Mansfield, Marblehead, Merrimac, Middleton, North Attleborough, Paxton, Peabody, Princeton, Shrewsbury, Sterling, Templeton and West Boylston, Massachusetts.

[2] Manchester Electric Company and Stanford, Vermont District of Green Mountain Power Corporation.

[3] Subsequent to the tender of the subject rate schedules here accepted for filing NEPCO tendered other rate schedule submittals covering R–1 service to Green Mountain Power Corporation, Manchester Electric Company and the Towns of Georgetown, Groveland, Marblehead and Merrimac, Massachusetts.

continuing study of the NEPCO rate structure. Meanwhile Shrewsbury may, at its option, take service from NEPCO at either the W–4 or R–1 rate.

In accepting NEPCO's rate schedules for filing as hereinafter provided, the Commission recognizes the need for further active consideration of the level of all of NEPCO's rates and charges as well as the terms and conditions under which the Company undertakes to serve wholesale electric customers, including provisions as to availability of W–4 and R–1 service, metering and voltage discounts and resale to other utility systems. Our jurisdiction over interstate wholesale rates and charges is a continuing matter and in the exercise thereof, we intend to assure the integrity of wholesale power supply to all customers at the lowest reasonable rates and charges, under proper terms and conditions of service. Accordingly, our action in accepting the rate schedules of NEPCO is not to be construed as approval by the Commission as to rate level, rate design, or the terms and conditions of NEPCO's wholesale electric service. Nor is it to be understood as in any way prejudicing the opportunity to file complaints with this Commission by wholesale power customers of NEPCO or its corporate affiliate. On September 30, 1964, comments were received from the Municipal Electric Association of Massachusetts and a number of its constituent members[4] which indicate dissatisfaction with various aspects of NEPCO's and Masselec's present rates and proposed rates W–4 and R–1. In general, these comments call to our attention matters previously communicated to the Commision and its staff through conferences between representatives of the Association and staff. The matters which the municipalities would have us consider are included within those to be investigated by the staff as ordered herein. We note that certain of the comments seek Commission suspension of the availability clause of rate W–4. In our opinion, this would have the legal effect of continuing in operation an availability clause of NEPCO's rate W–3, a provision no less restrictive than the provisions of W–4 about which comments are made. NEPCO's rates W–4 and R–1 being rate reductions we see no useful purpose in the suspension of the schedules of rates and charges therein.

By order of the Commission issued February 28, 1962, 27 FPC 404, we granted a request by NEPCO for an increase in its wholesale rates and charges as reflected in its W–3 rate schedule. That increase, then estimated to amount to approximately $1,500,000 annually, was granted to facilitate improved operating efficiencies and reduced power costs for NEPCO and its corporate affiliates. NEPCO's operating experience and Commission staff analysis since that time indicates continuing improvement in power costs of NEPCO. Projections through the year 1967 are set forth in this Commission's staff study published June, 1964. Our analysis of that study, data submitted in support of the recent rate filings, and representations by the Municipal Electric Association of Massachusetts indicate that further and substantial rate reductions may be possible. We believe this fact is recognized by the Company's undertaking to supply additional cost of service data and review the Company's rate structure early in the calendar year 1965 based on 1964 actual operating experience.

To minimize the effect of any possible regulatory lag, we are here directing the submission of NEPCO's 1964 cost of service data on or before February 15, 1965; that data to be submitted in such form as would serve as part of the Com-

[4] Included within the membership of the Association are all municipally owned resale purchasers from Masselec as well as purchasers from other electric systems.

pany's case in chief. To the extent that further wholesale reductions are indicated but not voluntarily effected by NEPCO, we intend that a formal rate hearing be convened promptly and this matter disposed of in accordance with our rate regulatory jurisdiction under the Federal Power Act.

NEPCO requests that the proposed rate schedules become effective as of October 1, 1964. As indicated above, Rate W–4 is available to all customers of NEPCO currently served under its W–3 rate, including the Town of Shrewsbury whose service we directed. R–1, an optional rate, is available to all wholesale customers of NEPCO and its corporate affiliates not directly connected to NEPCO's generating and transmission system, including the Seekonk operating district of Masselec and Pelham and Salem operating districts of Granite State, 20 municipal electric systems (including the Town of Shrewsbury if it should elect to take the R–1 rate), and two non-affiliated, investor owned companies, Green Mountain Power Corporation and Manchester Electric Company, presently served by Masselec. Masselec and its corporate affiliate, Narragansett Electric Company, have tendered certain rate schedule submittals to reflect this change in the power supply of the three operating districts of Masselec and Granite State.

The Commission further finds:

It is necessary and appropriate for the purpose of the Federal Power Act, particularly Sections 205, 206, 307, and 309 thereof, that NEPCO's, Masselec's and Narragansett's proffered rate schedules, as identified and designated in the attached Appendix A, be accepted to become effective as filed rate schedules under that Act on and after October 1, 1964; and that NEPCO be directed to submit cost data for the 1964 calendar year, together with such additional financial or other data as may be required by staff in its continuing review of NEPCO's utility operations.

The Commission orders:

(A) NEPCO's, Masselec's and Narragansett's rate schedules identified and designated in the attached Appendix A are hereby accepted for filing pursuant to Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations under that Act, to become effective as filed rate schedules of those companies on October 1, 1964.

(B) On or before February 15, 1965 NEPCO shall show its cost of rendering service under the revised rate schedules referred to above, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the calendar year 1964 adjusted for the rate changes for the calendar year 1964, a prudent net investment rate base, and a fair rate of return thereon; and shall furnish such additional data as may be required by the Commission staff in its continuing review of NEPCO's utility operations.

(C) The foregoing showing shall not preclude or limit any additional showing by NEPCO, or its corporate affiliates, and shall be without prejudice either to any future action by the Commisison or its staff or to any future position NEPCO and its corporate affiliates may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(D) The foregoing showing shall be submitted in writing with sufficient copies to provide this Commisison with six copies and to provide each State Commission affected with a like number of copies.

APPENDIX A

RATE SCHEDULE DESIGNATIONS

Rate schedule designations	Other party	Date of Instrument	Description
New England Power Company: Supp. No. 4 to Rate Schedule FPC No. 105 (Supersedes Supp. 2 to FPC 105).	Fitchburg Gas & Electric Co.	Undated	Decrease from W-3 to W-4.
Supp. No. 5 to Rate schedule FPC No. 106 (Supersedes Supp. 2 to FPC 106).	Narragansett Electric Company.	do	Do.
Supp. No. 3 to Rate Schedule FPC No. 112 (Supersedes Supp. 2 to FPC 112).	Granite State Electric Company.	do	Do.
Supp. No. 2 to Rate Schedule FPC No. 116 (Supersedes Supp. 1 to FPC 116).	Town of Littleton, New Hampshire.	do	Do.
Supp. No. 5 to Rate Schedule FPC No. 118.	Massachusetts Electric Company.	do	Do.
Supp. No. 1 to Rate Schedule FPC No. 112.	Granite State Electric Company (Pelham and Salem Districts).	8/26/64	Cancels contract for service to 2 districts.
Rate Schedule FPC No. 122 (Supersedes Supp. 1 to FPC 112 and supplement thereto).	Granite State Electric Company (Pelham and Salem Districts).	do	Substitutes proposed R-1 for W-3.
Rate Schedule FPC No. 123	Massachusetts Electric Company (Seekonk District).	do	Do.
Supp. No. 6 to Rate Schedule FPC No. 118.	Massachusetts Electric Company (Seekonk District).	do	Cancels contract for service to 2 districts.
Massachusetts Electric Company: Supp. No. 1 to Rate Schedule FPC No. 7.	Granite State Electric Company (Pelham and Salem Districts).	do	Cancels contract for use of facilities.
Rate Schedule FPC No. 32 (Supersedes FPC 7 and supplement thereto).	New England Power Company.	do	Use of facilities.
Narragansett Electric Company: Supp. No. 1 to Rate Schedule FPC No. 20.	Massachusetts Electric Company (Seekonk District).	8/26/64	Cancels contract for use of facilities.
Rate Schedule FPC No. 23 (Supersedes FPC 20 and supplement thereto).	New England Power Company.	8/26/64	Use of facilities.

Effective dates or designations have not been assigned to notices of cancellation of Supp. No. 1 to Nepco's Rate Schedule FPC No. 112, Masselec's Rate Schedule FPC No. 7, and Narragansett's Rate Schedule FPC No. 20 since these rates are superseded by other rate schedule filings and the proffered notices of cancellation therefore are unnecessary.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2085

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST, NET CHANGE THEREIN, AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 1, 1964)

Southern California Edison Company, Licensee for Project No. 2085,[1] filed its initial statement of claimed cost, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, on February 13, 1961, showing a

[1] The project, known as Mammoth Pool Project, is located in the Sierra National Forest, on the San Joaquin River, Rock Creek, and Ross Creek, in Fresno, and Madera Counties, California. The license for the construction, operation and maintenance of the project was issued under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of December 1, 1957.

claimed actual legitimate original cost $48,898,019.11 as of December 31, 1960.[2] In addition, Licensee's books and records show for the period from January 1, 1961, through December 31, 1962, a net increase in project cost of $345,406.45, resulting in a total claimed or recorded project cost of $49,243,425.56 as of December 31, 1962.

The Commission's staff conducted a field examination of the licensee's books and records for the purpose of determining the initial actual legitimate original cost as of December 31, 1960, net changes therein through December 31, 1962, and the resulting actual legitimate original cost as of December 31, 1962.

As a result of this examination, staff proposed, subject to Commission approval, certain adjustments, agreed to by the licensee, as shown in the attached Schedules I and II. These adjustments involve a total reduction of $88,352.79 in the claimed actual legitimate original cost as of December 31, 1960, from $48,898,019.11 to $48,809,666.32. No adjustments to recorded project cost were proposed for the period from January 1, 1961 through December 31, 1962.

The proposed accounting dispositions of the amounts involved in the proposed adjustments are shown in the attached Schedule II.

By letter dated April 8, 1964, Licensee confirmed its agreement with the proposed staff adjustments and resulting project costs.

The California Public Utilities Commission was advised by letter of this Commission dated April 14, 1964, as to the proposed staff adjustments and resulting project costs. By letter dated May 29, 1964, the California Commission indicated no objection thereto.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments, including the accounting dispositions and resulting project costs, and the California Public Utilities Commission, by its lack of objection thereto, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost of the project as of December 31, 1960, is $48,809,666.32; the net increase or change in the actual legitimate original cost of the project for the period from January 1, 1961, through December 31, 1962, is $345,406.45; and the resulting actual legitimate original cost of the project as of December 31, 1962, is $49,155,072.77, classified by primary plant accounts as shown in attached Schedule I.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including accounting dispositions, proposed by the staff and agreed to by Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and subsidiary project plant accounts, showing the debit balance of $48,809,666.32 as the actual legitimate original cost of the project

[2] Article 23 of the license provides for Commission determination of the actual legitimate original cost of the project, and of any addition thereto or betterment thereof.

as of December 31, 1960, the debit amount of $345,406.45 as the net increase or change in the actual legitimate original cost of the project for the period from January 1, 1961, through December 31, 1962, and the debit balance of $49,155,-072.77 as the actual legitimate original cost of the project as of December 31, 1962, all as more specifically shown in the attached Schedule I, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission FPC Form No. 7 and three certified copies of its adjusting journal entries showing compliance therewith, and submit two additional certified copies to the Regional Accountants at San Francisco, California.

SCHEDULE I

PROJECT NO. 2085 (MAMMOTH POOL)

SOUTHERN CALIFORNIA EDISON COMPANY

Summary by detailed plant accounts of claimed initial cost as of Dec. 31, 1960, and recorded changes thereto for the period from Jan. 1, 1961, through Dec. 31, 1962, with adjustments thereto and allowed balances as of Dec. 31, 1962

SUN OIL COMPANY, DOCKET NO. G-8288, ET AL. AND G-18353 [1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued October 1, 1964)

There is before us for consideration a Motion for Approval of Settlement Proposal, Termination of Rate Proceedings, and for Shortened Procedure Certification filed on July 31, 1964, by Sun Oil Company (Sun) encompassing

[1] The additional dockets involved herein are set forth in Appendices A, B, and C, attached hereto.

the rates for 95 of Sun's currently effective FPC Gas Rate Schedules. Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration. In summary, the settlement proposal as filed by Sun provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings with three exceptions hereinafter discussed;

(2) Sun waives the right to file for contractually authorized increased rates until August 1, 1967, for all of the rate schedules involved in the settlement However, Sun reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Sun will delete any favored-nation and price redetermination clauses contained in its Rate Schedule Nos. 9, 10, 11, 12, 13, 15, 33, 67, 79, 104, 170, and 171, and additionally will delete the periodic pricing provisions in its Rate Schedule Nos. 27, 29, 41, 42, 70, and 87;

(4) Refunds with interest at the applicable rates, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with January 1, 1961, to the date of issuance of this order for all of Sun's rate schedules, excepting Rate Schedule No. 119 for which the refund commencement date would be April 1, 1963, in accordance with other recent settlements we have approved in the consolidated proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, and Rate Schedule No. 87 whereunder Sun proposes a refund rate different than the proposed settlement rate;

(5) Exclusion from the settlement proposal of 13 sales in the Permian Basin; 13 sales related to previous offers of settlement accepted by the Commission; 1 sale to another producer whose resale rate is under suspension; and 10 sales consolidated in certificate proceedings that are presently before the Commission.

With respect to refunds, the parties to the settlement conference utilized cost of service studies and revenues based on contract rates to determine Sun's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after January 1, 1961, excepting the refunds to be made under Sun's Rate Schedule No. 119 which will be computed for sale made on and after April 1, 1963, in accordance with our previous orders accepting settlements in proceedings in *Union Texas* (*supra*). Additionally, as noted above, in regard to Sun's Rate Schedule No. 87, it proposes to make refunds computed on a rate of 17¢ per Mcf, although it proposes to reduce the presently effective rate of 21¢ per Mcf to the settlement rate of 15.0256¢ per Mcf. This rate schedule is for a sale by Sun to Southern Natural Gas Company in the Gwinville Field, Mississippi. We have recently considered a similar proposal involving the same purchaser in the same field in *Humble Oil & Refining Company*, Docket No. G–9287 and G–9288, *et al.*, 32 FPC 49 and 542, orders issued July 8, and August 7, 1964, and there found no justification for a departure from the established policy of requiring refunds for all rates schedules, where refunds are due, for the same period of time. In this instance, we likewise find no justification for departing from our policy of requiring that where refunds are required in general rate settlements the refund amount for each rate schedule, where collection was made subject to refund, be computed as the difference between such a rate and the settlement rate. Therefore, for all of the reasons set forth in our orders in *Humble* (*supra*) we shall condition our approval of Sun's proposal to require it to make refunds under its Rate Schedule No. 87 in accord with the same terms and conditions as under the

other rate schedules involved in the settlement. Applicable interest shall be paid on all of the refunds through July 31, 1964. As herein conditioned, such refunds will be approximately $4,250,000, exclusive of interest. Sun's future revenues will be decreased approximately $1,400,000 annually as a result of the settlement.

The purchasers of gas under the various rate schedules to which this settlement proposal relates are all natural gas pipeline companies subject to our jurisdiction under the Natural Gas Act, and many of such purchasers in turn have customers who are natural gas pipelines. Some of these pipeline customers of Sun or Sun's customers are required under express provisions of outstanding orders of this Commission to flow through to their customers all or any part of the refunds they may receive from Sun as a result of this settlement; others may choose so to do in the absence of such express provisions. For all of the reasons set forth in our order in *Humble* (*supra*) we shall require Sun to retain the amounts of refund ordered herein until further order directing the nature of their disposition [2] and also to submit within 45 days of this order to the Commission and each customer a detailed report setting out, by purchasers, the amount of refund related to each rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct each of the pipeline purchasers within ten days from the receipt of such report, to submit a report of their own setting forth whether they intend to pass on all or part of such refund amounts to their customers and the names of such customers and amounts of refund each would receive, or, if they claim the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Sun (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Sun (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

Settlement rates which are exceptions to the applicable area ceiling are proposed by Sun for a sale to Tennessee Gas Transmission Company (TGT) in the Six Parish Area in South Louisiana under Sun's FPC Gas Rate Schedule No. 37, and a sale to Transcontinental Gas Pipe Line Corporation (Transco) in the North Markham and North Bay City Fields in Texas Railroad District No. 3 under Sun's FPC Gas Rate Schedule No. 27. The circumstances surrounding the sale to TGT are the same as those we considered in *Sohio Petroleum Company*, Docket No. G–8488, *et al.*, 30 FPC 1623 (Order issued December 30, 1963) where we there approved the same settlement rate for a sale to TGT as Sun herein proposes. Therefore, we shall herein approve Sun's proposal to reduce the currently effective rate of 23.675¢ per Mcf to 17.75¢ per Mcf for this sale.

As to the sale to Transco, Sun proposes to dedicate substantial additional reserves approximating sixty-million Mcf of gas, and to extend the term of the contract for a period of three years so that it will run to December 24, 1973. Additionally, Sun proposes to eliminate the periodic price escalation provision

[2] Exempted from this requirement are the refunds to be made to Marshall R. Young Drilling Co. since the amount of refunds to this company is *de minimis*.

from the contract and will retain the existing maximum quantities which Transco is now obligated to take under the contract. We have in other general rate settlements considered like circumstances, and have approved settlement rates which were exceptions to the applicable area ceilings, *e.g.*, *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837, and, therefore, we find Sun's proposed settlement rate of 15.5¢ per Mcf to be proper and approve the same.

The settlement proposal includes rates for which issuance of related permanent certificates is pending, some of which are for sales presently being made under temporary certificates.[3] We shall set such applications for abridged hearing in accordance with Section 7 of the Natural Gas Act, providing that the settlement rates shall be the initial rates.

Additionally, included in the settlement proposal are pending certificate applications for sales by Sun in Texas Railroad Commission District Nos. 3 and 4. The sale in District No. 3 is to Trunkline Gas Company in the Sarah White Field, Galveston County, under Sun's FPC Gas Rate Schedule No. 120 for which the presently effective rate is 20¢ per Mcf, and Sun proposes to reduce the rate to 16¢ per Mcf. This sale is presently involved in the consolidated proceedings in *H. L. Hawkins, et al.*, Docket No. G–18077, *et al.*, in which the hearings have been concluded and the matters therein are now pending before the presiding examiner. Consequently, we shall not herein provide for permanent certification of this sale, and approve the settlement rate as proposed but find the initial rate shall be that determined in the *Hawkins* proceedings.

The sales in District No. 4 by Sun are to TGT in the Fitzsimmons Field, Duval County (Rate Schedule No. 154, Docket No. CI63–989) and to Natural Gas Pipeline Company of America in the Willamar Field, Willacy County (Rate Schedule No. 164, Docket No. CI64–470) for which the presently effective rates are 16¢ per Mcf. Sun's proposal is to continue these sales under temporary authority, and to retain the present rates. Since these proceedings are consolidated in the *Turnbull & Zoch Drilling Co.* (*Operator*), *et al.*, proceedings, Docket No. G–17960, *et al.*, we shall approve the settlement rates contingent upon the final order in such proceedings.

Sun is presently making two sales under temporary certificates to Southern Natural Gas Company (Southern), in Kokomo and Knoxo Fields, Walthall County, Mississippi, under its FPC Gas Rate Schedule Nos. 137 and 152, respectively. Additionally, it has pending a certificate application in Docket No. G–19015 (Rate Schedule No. 111) for a sale in Dexter Field, Walthall County to Southern which is presently being made under a rate schedule of another producer. Sun proposes an interim rate of 21.5¢ per Mcf for each of these sales pending final order, subject to judicial review, in the consolidated proceedings in *Sun Oil Company, et al.*, Docket No. G–8592, *et al.*, and it proposes then to accept the rate for each of such sales to that finally determined in such proceedings. Sun will refund the difference between the settlement rate, from the date of issuance of this order, and the rate finally determined in such proceedings if the latter be lower.

Sun has two sales to United Fuel Gas Company (United Fuel) in the Ellis and North Chalkley Fields, South Louisiana, under its FPC Gas Rate Schedule Nos. 38 and 76, respectively. The accepted rate under Rate Schedule No. 38 is 17.5¢ per Mcf for the originally dedicated acreage. Sun added acreage and was granted a certificate at 19.5¢ per Mcf in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 32 FPC 254 (Opinion No. 436, issued July 23, 1964). Also, Sun was granted a certificate for added acreage in *Union Texas* under its

[3] Dockets CI60–75, CI63–13, CI63–1142, CI63–1360 and CI64–315.

Rate Schedule No. 76 at a rate of 20¢ per Mcf while the base rate was 18.3¢ per Mcf. Sun proposes a rate of 17.5¢ per Mcf for its sales to United Fuel under its Rate Schedule No. 38, and a rate of 19.1¢ per Mcf under its Rate Schedule No. 76 for all of the gas sold and delivered under each of such schedules. Because the additional acreage, under Rate Schedule No. 76, has increased the reserves dedicated to that sale by approximately 15.4 million Mcf, over the basic figure of 4.7 million Mcf, we find the settlement rate to be in the public interest and shall approve the same.

Sun's settlement proposal includes a sale to TGT in the Northwest Chalkley Field, South Louisiana under its Rate Schedule No. 157 from acreage which it obtained by assignment from Samedan Oil Corporation (Samedan). In Docket No. CI62–378 we imposed a refund condition on Samedan subject to final order in *Union Texas* (*supra*). Consequently, we hereby condition our approval of Sun's settlement proposal to impose the same refund obligation on Sun in its Docket No. CI63–1360, in which its certificate application is pending, as presently is on Samedan.

Our conditional approval of Sun's proposal results in Sun refunding approximately 67% of amounts collected above the settlement rates, subject to refund, and the reduced rates of $1,400,000 annually will constitute disallowance of approximately 70% of the increased rates currently being collected in Section 4(e) proceedings. Additionally, four of Sun's rates are being reduced below the "last-firm-rate," of which one is not subject to Section 4 proceedings.[4]

As conditioned herein, we believe that the principles underlying the present settlement proposal are consistent with those utilized in previous major independent producer rate settlements.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Sun's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Proposal filed by Sun and as herein conditioned on July 31, 1964, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal as herein conditioned, filed by Sun on July 31, 1964, is approved and made effective subject to the terms and conditions herein.

(B) The applicable settlement rates set out in Appendix A hereto are approved, and such rates shall be effective as of September 1, 1964.

(C) The approved settlement rates shall be applicable during the moratorium period herein provided for to all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Sun, its successors or assignees.

---

[4] The annual reduction in rates effectuated by our approval of this settlement under these four rate schedules approximates $19,000.

(D) Sun shall compute the difference between the rates collected subject to refund and the related settlement rates or rate not subject to refund, whichever rate was the greater, for the period from January 1, 1961, to the date of this order, together with interest as specified in each docket to July 31, 1964. Sun shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on each of the purchasers involved, setting out by purchasers the amount of refunds related to each rate schedule (showing separately the principal and applicable interest) the bases used for such determination and the periods covered.

(E) Sun shall retain the amounts shown in the report required under paragraph (D) above, subject to further order of the Commission directing the disposition of those amounts, *provided, however*, Sun shall within 90 days from the date of this order, (1) refund with interest as specified in each docket computed to July 31, 1964, the difference between the rates collected subject to refund and the related settlement rates, on and after January 1, 1961, to the date of this order for all of such of Sun's Rate Schedules, where the rates were collected subject to refund for sales of natural gas to Marshall R. Young Drilling Co. and (2) report to the Commission in writing, the amount of refunds made to Marshall R. Young Drilling Co. showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchaser showing receipt of the refunds in conformity with the settlement proposal as conditionally approved herein.

(F) If Sun elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from November 15, 1964, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(G) If Sun elects to deposit the retained refunds in a special escrow account, Sun shall tender for filing on or before November 15, 1964, an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Sun and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Sun, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation

shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(H) Sun shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the refund requirements under its Rate Schedule No. 87, and the requirement for possible future refunds under its Rate Schedule No. 157.

(I) Any party to the proceedings or settlement negotiations having objections to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission (Original and one copy), and by serving copies on the other parties.

(J) If as a result of any objections filed pursuant to paragraph (I) hereof, the Commission by subsequent order changes Sun's duties and obligations hereunder, Sun's acceptance of this settlement order shall not be binding on it without its express agreement.

(K) The pending certificate proceedings in Docket Nos. CI60–75, CI63–13, CI63–1142, CI63–1360, and CI64–315 set out in Appendix B hereto shall not be terminated on the basis of the approval of the settlement proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act and the terms and conditions of this order.

(L) Within 90 days from the date of this order, Sun shall make such filings under its rates schedules as are required to make effective the terms of the settlement proposal.

(M) Upon full compliance by Sun with all the terms and provisions of this order, the Section 4(e) proceedings listed in Appendix A and C hereto, and the Section 5(a) proceedings in Docket No. G–18353 shall terminate.

(N) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with paragraph (M) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61–2, AR64–1, AR64–2 and G–17613, *et al.*, respectively; the Section 7(c) proceedings listed in Appendix C are hereby severed from their respective consolidated proceedings.

(O) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Sun, the Commission staff, or any affected party hereto, in any proceedings now pending including area rate or similar proceedings, or hereafter instituted by or against Sun or any other companies, person or parties affected by this order.

[1] This rate filed but has not been made effective.
[2] Settlement rate subject to outcome of *H. L. Hawkins, et al.*, Docket No. G-18077, *et al.*
[3] Eliminate periodic escalations.
[4] Eliminate periodic escalations. Refunds will be made above the 15.0256¢ settlement rate as conditioned herein.
[5] Eliminate Favored Nations and Price Redeterminations.
[6] Rates shown at 14.65 psia contract rate at 16.7 psia.
[7] Eliminate Favored Nations and Periodic Escalations. Price redetermination clause not further operative.
[8] Eliminate Favored Nations, Price Redetermination and Periodic Escalations.
[9] This settlement price of 15¢ is the same as that for which the operator, South-Tex Corporation, settled its share of the gas which was approved by Commission order issued Apr. 6, 1961, in Docket No. RI61-243. Sun will accept the same type of settlement, including the elimination of the favored-nation clause and amendment of the tax provision. In Docket No. RI62-418 South-Tex Corporation, as operator, has filed for Sun's interest only and this filing has been designated Supplement No. 27 to South-Tex Corporation's FPC Gas Rate Schedule No. 1. (See Commission order issued Nov. 9, 1962, in the lead docket *Sun Oil Co.*, Docket No. G-6550.) Sun filed a corporate undertaking to refund in Docket No. RI62-418. Sun was permitted to intervene in Docket No. RI62-418 by Commission order issued July 17, 1963.
[10] Mitchell County price.
[11] Nolan County price.
[12] This sale is currently being made under Atlantic Refining Company's FPC Gas Rate Schedule No. 613.
[13] Includes acreage added by Supplement No. 8 to Rate Schedule No. 38.
[14] Settlement rate applicable to all acreage, including that added by Supplement No. 9 to Rate Schedule No. 76.
[15] Subject to outcome of *Turnbull & Zoch Drilling Company, et al.*, Docket No. G-17960, *et al.*
[16] This sale is currently being made under Skelly Oil Company's Rate Schedule 123.
[17] Settlement rate applicable to all acreage, including that added by Supplement No. 8 to Rate Schedule No. 38.
[18] Settlement rate subject to outcome of *Sun Oil Company, et al.*, Docket No. G-8592, *et al.*

(Issued October 2, 1964)*

Syllabus

1. Nothing in vague language of initial certificate order could properly have led pipeline to conclusion that Commission had resolved no-profits-to-affiliates question in its favor rather than deferring it for subsequent consideration. P. 909.
2. Clarification as to intent of language should have been sought when matter was still pending before agency, not years later during course of subsequent proceeding preshadowed by Commission language. P. 909.
3. In carrying out ordinary duty of any judicial body to interpret its opinion, it would be highly improper to consider affidavits from former Commissioners as to what was before them, and even more improper to call them as witnesses. P. 909.
4. Courts and Commissions speak only in their opinions; to depart therefrom would remove any assurance as to significance to be attached to written opinions and make meaning of decisions depend on subjective impressions and vagaries of memory. P. 909.
5. Clearly prior opinion did not decide whether no-profits-to-affiliates rule should be applied in determining pipeline's original cost. P. 910.
6. Commission *denies* petition for rehearing and to reopen record.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

On September 3, 1964, Florida Gas Transmission Company filed an application for rehearing of our Opinion No. 431–A and order issued August 5, 1954, 32 FPC 518, insofar as the Opinion and order relate to the petition of Florida Gas to reopen these proceedings. In our Opinion No. 431–A and order we denied rehearing with respect to our original Opinion No. 431 and order issued June 8, 1964, 31 FPC 1402, in which among other things we disallowed as the cost of Florida Gas' pipeline the amount of $8,187,110 representing profits of affiliated engineering and construction companies. We also denied Florida Gas' petition to reopen the record upon the basis of attached affidavits from three former members of this Commission generally to the effect that Opinion No. 301 (16 FPC 118) granting Florida Gas' predecessor, Houston Texas Gas & Oil Corporation, a certificate did not contemplate application of the no-profits-to-affiliates rule but merely a scrutiny of the costs as to their reasonableness.

In the present application for rehearing Florida Gas renews its request that we reopen the record pointing out that the object of the Petition to Reopen was not to have the affidavits received in the record, but to have the testimony of these persons received.

Our objection to consideration of the statements of the former Commissioners in Opinion No. 431–A went not to the fact that they were by way of affidavits, rather than testimony which could be the subject of cross examination, but

*Reversed, *Florida Gas Transmission Co.* v. *F.P.C.*, 362 F. 2d 331 (CA5–1966). Petition for rehearing pending.

to the propriety of attempting to go behind the language of an opinion to determine on the basis of the recollection of former Commissioners, what they intended to decide. We do not think the issue is anyway changed by the suggestion that the Commissioners' testimony, if permitted to be introduced into evidence, would cover the question of what issue they believed was before them for decision as well as how they thought they were resolving it.

The extrinsic facts are that in the course of the proceeding in Docket No. G–9262 leading to Opinion No. 301, an intervener, Green Fuels, Inc., raised the question of whether the no-profits-to-affiliates rule should not be applied to petitioner in view of the relationship between that company and the construction-engineering group which had been disclosed, and the matter was discussed pro and con in the briefs of some of the other interveners and the applicant. However, the Commission in its discussion did not mention the no-profits-to-affiliates rule or in terms adopt or reject the intervener's contentions. Instead it confined itself to the statement:

> * * * While as we have already stated, the cost of the proposed facilities appears to be reasonable, in view of this fact [that three companies who would perform construction activities for the pipeline had presidents who were each officials and directors of Houston Gas, and two of which owned blocks of Houston Gas stock], this cost will be carefully scrutinized in any future proceeding dealing with accounting or rates of Houston Gas. (16 FPC 142)

It is of course possible that the Commission in deciding the matter, and the three Commissioners in the majority, in subscribing to the above statement, intended to hold that the intervener was wrong and the applicant right as to the application of the no-profits-to-affiliates rule, and that "in any future proceeding dealing with accounting or rates of Houston Gas" the careful scrutiny to be given to proposed construction costs would be limited to their reasonableness. This is not, however, what was said. The intervener, who had raised the matter in the first place, clearly was not put on notice by the language the Commission utilized that, if he did not seek rehearing on this point and then raise it on review, there would be a final adjudication outstanding against him on this issue. More important, there was nothing in this vague language which could properly have led Houston Texas to the conclusion that the Commission had necessarily resolved the question in its favor rather than deferring it for subsequent consideration on an appropriate record devoted expressly to the issue. Thus, even assuming that the Commission intended to resolve the issue in petitioner's favor, testimony to that effect today could not change the fact that they did not do so. The time for petitioner to have sought clarification from the Commissioners as to the intent of their language was when the matter was still pending before the agency, not years later during the course of the subsequent proceeding the Commission's language preshadowed.

It devolved upon this Commission to interpret the vague language quoted above. In carrying out this ordinary duty of any judicial body to interpret its prior opinions, we think it would be highly improper to consider affidavits from former Commissioners as to what was before them or what was decided by them, and even more improper to call them as witnesses. We are here dealing with the opinion of a quasi-judicial body. Courts and commissions speak only in their opinions. To depart from this traditional rule would remove any assurance as to the significance to be attached to written opinions, and would make the meaning of our decisions depend on subjective impressions and the vagaries of memory.

The distinction which petitioners attempt to make between what an opinion means and what issues it covers is without substance. The issues decided by an

opinion (as well as how they are decided) can be determined only from the opinion itself. In our judgment it is clear that the prior opinion in this case did not decide the issue whether the no-profits-to-affiliates rule should be applied in determining the original cost of this pipeline.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing of Florida Gas present no new facts or principles of law with respect to reopening the record to receive the testimony of three former members of this Commission which were not considered by the Commission when it issued its Opinion No. 431–A and order or which, having now been considered, warrant any change in or modification of said Opinion and order except as indicated below with respect to receipt of testimony rather than affidavits.

The Commission orders:

(A) The application for rehearing filed by Florida Gas with respect to Opinion No. 431–A and order is hereby denied.

(B) The petition to reopen the record to receive the testimony of three former members of the Commission is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2290

ORDER DENYING APPLICATION FOR REHEARING

(Issued October 2, 1964)

On September 4, 1964, Southern California Edison Company (Applicant) filed application for modification of the Commission's license order issued August 7, 1964, 32 FPC 553, with respect to Applicant's constructed Kern River No. 3 hydroelectric project located on Kern River, Salmon Creek and Corral Creek in Kern and Tulare Counties, California, in the vicinity of Bakersfield, Bodfish, Isabella, Kernville and Weldon, and affecting lands of the United States within the Sequoia National Forest, Project No. 2290.

Applicant seeks modification of the license order to affect the deletion therefrom of Articles 5, 10 and 12, as set forth in Form L–1 (revised April 1, 1964) entitled "Terms and Conditions of License for Constructed Major Project Affecting Lands of the United States" (32 FPC 71)[1] and a change in the termination date of the license period from December 31, 1993 to September 20, 2013.

In support of its request for the deletion of Articles 5, 10 and 12 from the license order, Applicant states that these Articles are inconsistent and conflict with the provisions of special Articles 34 through 42, inclusive, of the license order, thereby creating an ambiguity. Applicant sets forth two interpretations of the several articles. The first is that the subject matter involved is controlled by the specific provisions of special Articles 34 through 42, inclusive, and that Articles 5, 10 and 12 of Form L–1 are therefore subordinate and ineffective.

---

[1] Article 5 deals with the use, storage and discharge from storage of water and Article 10 deals with construction, maintenance, and operation of facilities for the conservation and development of fish and wildlife resources. Article 12 deals with the construction, maintenance and operation of recreational facilities.

The second is that if Articles 5, 10 and 12 are to be given affect and are interpreted as giving the Commission the authority to make further orders with respect to the use and release of water for the construction, maintenance or operation of facilities for fish, wildlife and recreation then the provisions of Articles 34 through 42, inclusive, setting out detailed requirements in certain cases are rendered nugatory. We do not believe that either of these interpretations accurately reflect the intent of Articles 5, 10 and 12.

Articles 5 and 10 which deal with the use, storage and discharge from storage of waters and the construction, maintenance and operation of facilities for the conservation and development of fish and wildlife resources, respectively, provide in broad terms for licensee action in these several areas subsequent to Commission order. To the extent that they cover the same subject matters involved in Articles 34 through 42, inclusive, they are subordinate to them. Articles 5 and 10 would, nevertheless, be applicable in matters outside of the scope of these special articles.

Furthermore, it should be noted that the limitation with regard to the review of Articles 35, 36, 37, 40, and 41 as provided in Article 41 is for a ten year period. As for the provisions of Article 12 which deal with the construction, maintenance and operation of recreational facilities they are nowhere duplicated in Articles 34 through 42, inclusive.

Applicant claims that it is entitled to a 50 year license for Project No. 2290. It further contends that "the Commission did not call upon it to show cause or present any evidence why it should not be granted a license for a substantially shorter period." However, upon consideration of the additional facts and argument presented in its application we do not reach a conclusion different from that set forth in the order issuing license. Section 4 (16 U.S.C. 799) of the Federal Power Act provides that licenses "shall be issued for a period not exceeding 50 years." The determination of a license term is, accordingly, within the sound discretion of the Commission [2] and the Commission has frequently issued licenses for less than 50 years.

The Commission, in issuing a license for Project 2290 for a term of approximately 30 years, spelled out in detail why it believed that a period of 25 years was an appropriate normal term in licensing projects which had previously enjoyed 50 years of operation under a Department of Agriculture permit and why, nevertheless, it would give applicant an additional 5 years here. We made clear in our decision that "in cases where for good cause a different term is justified" we would consider a longer term. But, except for stating that it had previously received 50 year terms for licenses in similar situations, and a bare and totally unconvincing contention that a 50 year license is as necessary for a project which has already been in operation for 50 years as for a new project, applicant has not purported to show good cause for a longer term and the general arguments it has made are not persuasive.

Moreover, in the absence of any showing that the public interest requires a license term of more than 30 years, we see no reason for a hearing on the matter and will deny applicant's request.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791a–825r), that the Southern California Edison Company's application, filed September 4, 1964, for modification of the order issued August 7, 1964, granting a license for Project No. 2290 be denied.

---

[2] *Montana Power Company* v. *Federal Power Commission*, 330 F. 2d 781 (1964).

The Commission orders:

The aforesaid application for modification of the order issued on August 7, 1964, be and is hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

GENERAL CRUDE OIL COMPANY, DOCKET NO. G-13941, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued October 5, 1964)

On August 4, 1964, General Crude Oil Company (General) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Texas Eastern Transmission Corporation (TETC) by General. The offer relates to sales made under General's FPC Gas Rate Schedule No. 2 in the Silsbee Field, Hardin County, Texas Railroad Commission, District No. 3. The proposed increased rates ranging from 14.4¢ to 15.6¢ per Mcf were each suspended by order of the Commission for the statutory period.

Under the terms of the offer, General proposes to eliminate the price escalation provisions from its rate schedule, and to establish a 15¢ per Mcf rate for the subject sale. Additionally, General proposes to withdraw Supplement Nos. 11 and 13 to its Rate Schedule No. 2, each of which made effective a rate, subject to refund, above the settlement rate. No protests or objections have been filed to the offer.

General, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TETC under the subject rate schedule in excess of the settlement rate. The estimated total dollars to be refunded approximates $1,000 exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

For all of the reasons set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49, we shall require General to retain the amount of refunds, with interest, ordered herein in a savings account in any bank where deposits are insured by the Federal Deposit Insurance Corporation until further order directing the nature of their disposition and also to submit within 45 days of this order to the Commission and to TETC a detailed report setting out the amount of refunds related to the instant rate schedules, the volumes of gas sold thereunder and the period covered. We shall also by separate action direct the pipeline purchaser within ten days from the receipt of such report to submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its customers or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that

---

[1] Also involved are the proceedings in Docket Nos. G-16675, G-19739, RI61-211, RI62-134 and RI64-204.

the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by General (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from TETC (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

However, we desire to make it clear that our conditional approval of General's offer of settlement shall not be construed as approval of any future increased rates filed in accordance with its reservation of the right to file increases to cover future tax increases as provided in its offer of settlement, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving General's rates and rate schedules.

The Commission orders:

(A) The offer of settlement filed with the Commission by General August 4, 1964, is hereby approved in accordance with the provisions of this order.

(B) General shall file, within 30 days from the date of issuance of this order, an executed contractual amendment to its FPC Gas Rate Schedule No. 2, eliminating the present price escalation provisions therefrom as specified in its offer of settlement. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) General shall compute the difference between the rates collected subject to refund in Docket Nos. RI62–134 and RI64–204 and the related settlement rate for the period such rates were collected subject to refund, to the date of this order, together with interest as specified in each docket to the date of this order. General shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on TETC setting out the amount of refund related to the subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination and the period covered.

(D) General shall retain the refund amounts shown in the report required under paragraph (C) above in a savings account in any bank where deposits are insured by the Federal Deposit Insurance Corporation, subject to further order of the Commission directing the disposition of those amounts.

(E) Supplement Nos. 11 and 13 to General's FPC Gas Rate Schedule No. 2, which were made effective subject to refund, by General after having been suspended for the statutory period by order of the Commission, and are each for proposed rates above the settlement rate, be and the same are hereby deemed to be withdrawn.

(F) Upon notification by the Secretary of the Commission that General has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65¢ psia for sales under General's FPC Gas Rate Schedule No. 2, as specified in its offer of settlement, shall be effective as of the date of issuance of this order, and the above designated proceeding shall be deemed terminated.

(G) The acceptance by the Commission of General's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against General, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SINCLAIR OIL & GAS COMPANY, ET AL., DOCKET NO. G–16760, ET AL.; TURNBULL & ZOCH DRILLING CO. (OPERATOR), ET AL., DOCKET NO. G–17960, ET AL.

ORDER GRANTING AND DENYING IN PART MOTIONS AND PETITIONS

(Issued October 5, 1964)*

By order issued May 28, 1964, in Docket No. G–17960, *et al.*, [Unreported] we consolidated for hearing 67 applications for certificates of public convenience and necessity to make sales for resale in interstate commerce of natural gas produced in Texas Railroad Commission District No. 4, and by order issued March 25, 1964 in Docket No. G–16760, *et al.*, [Unreported] we consolidated for the same purposes 42 applications involving sales for resale from Railroad District No. 2. These consolidations for hearing of virtually all pending producer applications relating to Railroad Commission Districts 2 and 4 were in keeping with our policy of utilizing an area approach to producer regulation in both certificate and Sections 4 and 5 rate matters.

Subsequent to the issuance of an order consolidating the proceedings in Docket No. G–17960, *et al.* for hearing, various motions and petitions, as described below, were filed by various applicants therein and, on July 15, 1964, the presiding examiner referred these pleadings to the Commission pursuant to Section 1.12(d) of the Rules of Practice and Procedure. The pleadings are described as follows:

Applicant	Filing date	Title
(1) Delhi-Taylor Oil Corporation	6/29/64 amended 7/ 6/64	Motion for clarification of issues.
(2) Jonnell Gas, Inc., and J. C. Trahan, Drilling Contractor, Inc.	6/29/64	Petition to remove uncertainty (pursuant to section 1.7(c) of rules).
(3) Bright & Schiff	6/30/64	Motion to: (A) Sever refund issue; and (B) Establish burden of proof with respect to certain equitable considerations with respect to certain intervenors.
(4) Gulf Oil Corporation	6/30/64	Motion to sever refund issue.
(5) The Atlantic Refining Company	7/ 2/64	Motion for clarification of issues.
(6) Blanco Oil Co. and Killam & Hurd	7/ 7/64	Motion for clarification of issues.
(7) Bright & Schiff	6/29/64 amended 7/10/64 (see below)	Motion for rehearing of order issued May 28 1964, consolidating applications; and, in the alternative, motion to sever Docket No. CI61–1541.
(8) Bright & Schiff	7/10/64	Amended motion. (A) For rehearing of order issued May 28, 1964, consolidating applications; and (B) In the alternative, for severance of Bright & Schiff's Docket CI61–1541 from this consolidated proceeding; and (C) In the alternative, to strike the intervention of certain interveners as to refund issue; and (D) In the further alternative, to remove uncertainty by entering an order that the decision of *Amerada* and *Skelly* shall have no effect whatsoever upon the hearing and decision of this consolidated proceeding.

Answers to these pleadings, recommending denial, were filed by the Commission Staff (Staff) on July 9, 1964 and by the Brooklyn Union Gas Company, an intervener, on July 31, 1964.

*Order issued December 2, 1964, denying rehearing, 32 FPC 1387.

The motion of Bright & Schiff, as amended listed as (7) and (8) above, insofar as it requested rehearing of an order of May 28, 1964, *supra*, and in the alternative severence of Bright & Schiff's docket was denied by an order of September 11, 1964, [Unreported] for the reasons stated therein. The remaining pleadings request that the Commission issue an order allowing that the above-entitled proceeding be divided into two stages: stage 1, to be concerned with the initial prices required by the public convenience and necessity and stage 2, to be concerned with the questions relating to refunds should it be decided in the first stage that the prices collected by the applicants under temporary certificates without express refund conditions are higher than the prices required by the public convenience and necessity. Applicants request that the Commission finally resolve the issues in the first stage prior to a hearing on the second stage, should it be necessary.

In Docket No. G–16760, *et al.*, a Motion for Clarification of Issues was filed by Continental Oil Company on June 29, 1964, and was answered and opposed by Staff on July 14, 1964. On July 16, 1964, the presiding examiner filed his Ruling upon Continental's motion, and decided that, as requested by movant, no evidence relating to the issue of refunds would be received at this initial hearing stage, but would be deferred until such time as the in-line price has been determined for Railroad District No. 2.

On July 24, 1964, Staff filed its appeal from the examiners ruling, and on July 27, 1964, United Gas Improvement Company (UGI) filed a "Motion for Reconsideration and Alternatively for Referral to the Commission of Ruling upon Motion for Clarification of Issues." On August 3, 1964, Continental filed an answer in opposition to UGI's motion.

We are of the view that the requests described above are reasonable. The procedure set forth therein would be more orderly and could relieve participants of time and expense of preparing testimony and attending hearings should it be determined that some or all of the prices being collected under temporary certificates are not higher than the prices required by the public convenience and necessity and that there is no refund issue as to some or all of the dockets. Moreover after the exact amount of refund in issue, if any, is known for each applicant, the applicant will be in a better position to decide whether or not to present evidence and arguments as to why refunds should not be ordered; and should the decision be made to present such evidence, what kind of evidence to present. For these reasons we shall order that any consideration of refunds in cases where the temporary certificate does not contain an express refund condition be deferred until further order of the Commission.

In addition to the requests discussed above, certain of the pleadings request that we rule that burdens of proof with regard to the refund issues rest upon parties other than the producers. In this regard, Bright & Schiff (8)(C) above, requests that we strike the intervention of certain producers as to the refund issue. In light of the action that we are taking herein, we shall deny such requests as moot at this time.

Finally, Bright & Schiff ((8)(D) above) requests that we rule that the decisions of the Commission in the *Amerada*[1] and *Skelly*[2] proceedings shall have no effect whatsoever upon the hearing and decision of this consolidated proceed-

---

[1] *Amerada Petroleum Corporation, et al.*, Docket No. CI62–1544, *et al.*, Opinion No. 422 issued March 23, 1964, 31 FPC 623, and granting rehearing April 30, 1964, 31 FPC 1041. Order on rehearing May 27, 1964, 31 FPC 1315.

[2] *Skelly Oil Company*, 28 FPC 401, *affirmed* as to initial prices *sub nom.*; *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d 242, cert. denied, *sub nom.*; *Prado Oil & Gas Co.* v. *F.P.C.*, 377 U.S. 963; *Skelly Oil Co.* v. *F.P.C.*, 377 U.S. 963.

ing. Bright & Schiff conclude that the instant consolidated proceeding was instituted "* * * because of *Skelly* and *Amerada* and with the *intent* of arbitrarily applying the decision of these proceedings to this consolidated proceeding." (8 *supra* at p. 4, emphasis in original.) Bright & Schiff and all other participants will receive a full hearing on the merits of all applications. They are free to present any evidence which the Commission has held to be proper in a Section 7(c) producer certificate case,[8] including relevant evidence relating to initial prices of permanently certificated sales. The precedential value of the above-mentioned Commission opinions, other Commission opinions, Commission orders and court decisions relied upon by participants before the presiding examiner and the Commission will be considered in the context of the case when presented. It would be premature to consider such values at this time. Accordingly, this request of Bright & Schiff will be denied.

The Commission orders:

(A) The issue as to whether or not refunds should be ordered to be made by applicants operating under temporary authorizations not containing express refund conditions in these proceedings is hereby deferred until further order of the Commission.

(B) The relief sought by each of the pleadings identified at page 914 of this order, except insofar as granted above or previously denied, is hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

SOUTHWEST GAS PRODUCING COMPANY, INC., ET AL., DOCKET NO. RI64-262

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued October 5, 1964)

On August 3, 1964, Southwest Gas Producing, Inc., *et al.* (Southwest), submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Texas Eastern Transmission Corporation (TETC) by Southwest. The offer relates to sales made under Southwest's FPC Gas Rate Schedule Nos. 5 and 6 in Hico-Knowles and Unionville Fields, Lincoln Parish, North Louisiana. The proposed increased rates of 16.8263¢ per Mcf were suspended by order of the Commission for the statutory period.

Under the terms of the offer, Southwest proposes to eliminate the price escalation provisions from its rate schedules, and to establish a 16.7756¢ per Mcf rate for the subject sales. No protests or objections have been filed to the offer.

Southwest, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TETC under the subject rate schedules in excess of the settlement rates. The estimated total dollars to be refunded approximates $2,400 exclusive of interest.

The proposed settlement is consistent with the provisions of the Seventh Amendment to the Commission's Statement of General Policy No. 61-1, 30 FPC

---

[8] See Opinion No. 436, *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 32 FPC 254, at pp. 263, 264 and cases referred to therein.

1370, and its acceptance would serve the public interest. However, it is not consistent with the Ninth Amendment, issued July 28, 1964, 32 FPC 422, to said Statement inasmuch as the remaining primary term under the instant contracts is about 3 years and, therefore, we shall condition our approval to require Southwest to extend the terms of each of its contracts consistent with such amendment.

For all of the reasons set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require Southwest to retain the amount of refunds, with interest, ordered herein in a savings account in any bank where deposits are insured by the Federal Deposit Insurance Corporation until further order directing the nature of their disposition and also to submit within 45 days of this order to the Commission and to TETC a detailed report setting out the amount of refunds related to the instant rate schedules, the volumes of gas sold thereunder and the period covered. We shall also by separate action direct the pipeline purchaser within ten days from the receipt of such report to submit a report of its own setting forth whether it intends to pass on all or part of such refund amounts to its customers or, if it claims the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Southwest (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from TETC (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

We find that approval of the proposed settlement, as conditioned herein would serve the public interest.

However, we desire to make it clear that our conditional approval of Southwest's offer of settlement shall not be construed as approval of any future increased rates filed in accordance with its reservation of the right to file increases to cover future tax increases as provided in its offer of settlement, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Southwest's rates and rate schedules.

The Commission orders:

(A) The offer of settlement filed with the Commission by Southwest, August 3, 1964, is hereby approved in accordance with the provisions of this order.

(B) Southwest shall file, within 30 days from the date of issuance of this order, executed contractual amendments to its FPC Gas Rate Schedule Nos. 5 and 6, eliminating the present price escalation provisions therefrom as specified in its offer of settlement and extending the terms of the contracts to August 3, 1969 in accordance with the Ninth Amendment to the Policy Statement No. 61–1. The contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Southwest shall compute the difference between the rates collected subject to refund and the related settlement rates for the period such rates were collected subject to refund, to the date of this order, together with interest as specified in the above docket to the date of this order. Southwest shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on TETC setting out the amount of refund related to the subject rate

schedules (showing separately the principal and applicable interest), the basis used for such determination and the period covered.

(D) Southwest shall retain the refund amounts shown in the report required under paragraph (C) above in a savings account in any bank where deposits are insured by the Federal Deposit Insurance Corporation, subject to further order of the Commission directing the disposition of those amounts.

(E) Upon notification by the Secretary of the Commission that Southwest has complied with the terms and conditions of the order, the rate and charge of 16.7756¢ per Mcf at 15.025 psia for sales under Southwest's FPC Gas Rate Schedule Nos. 5 and 6, as specified in its offer of settlement, shall be effective as of the date of issuance of this order, and the above designated proceeding shall be deemed terminated insofar as Southwest's FPC Gas Rate Schedule Nos. 5 and 6 are concerned.

(F) The acceptance by the Commission of Southwest's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Southwest, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HYDROELECTRIC PROJECT LICENSES—EXPIRATION—RECAPTURE AND RELICENSING, DOCKET NO. R-250

ORDER NO. 288

ESTABLISHING PROCEDURES FOR RECAPTURE OR RELICENSING OF HYDROELECTRIC PROJECTS

(Issued October 6, 1964)*

This is a proceeding to amend our General Rules and Regulations under the Federal Power Act to establish procedures for recapture or relicensing of hydroelectric projects upon the expiration of licenses. Because the Commission since its organization in 1920 has usually issued licenses for the fifty-year maximum term provided in section 6 of the Federal Power Act, the first year for expiration of numerous licenses is 1970.[1] As shown below, our obligations with respect to recapture or relicensing commence well before the license for a project expires This rulemaking is intended to provide the basis for orderly and expeditious discharge of this Commission's obligations under sections 14 and 15 of the Federal Power Act both before and after such licenses expire.

Upon the expiration of a license, the United States under section 14 of the Federal Power Act may take over, maintain, and operate the project by paying the licensee's net investment, not to exceed the project's fair value, plus certain severance damages.[2] If the United States does not exercise this right of recapture, the Commission under section 15 may relicense the project, either to the original or a new licensee. Until it does so, it may issue annual licenses to the original licensee on the terms of the expired license.

---

*Published in the Federal Register on October 14, 1964 (29 F.R. 14106). Rehearing denied by order issued December 4, 1964.

[1] Licenses for 2 projects of over 2,000 horsepower installed capacity expire in 1968; 25 in 1970; 25 from 1971 through 1974; and 25 from 1975 through 1979. Thus, 75 licenses for such projects expire in the first decade after the Commission's 50th anniversary.

[2] The United States at any time may take over a project by condemnation.

The notice of proposed rulemaking in this docket, issued on November 6, 1963 (28 Fed. Reg. 12175), proposed the following procedures for Commission's discharge of its obligations under these provisions. During each of the 5 years before a license expired, the Commission would give notice of the expiration in its Annual Report and in the Federal Register. At the beginning of this notice period, the Commission would solicit from interested Federal agencies their recommendations on recapture. It also would ask the licensee for its plans for future development and use and would accept the comments of other interested parties. The licensee would have an opportunity to respond to any agency comments recommending recapture. After oral argument, if appropriate, the Commission would send to Congress at least 2 years before the license expired its recommendation on recapture, accompanied by the Federal agencies' and licensee's submissions plus the estimated cost to the United States of recapture. If Congress authorized recapture, the Commission would give the licensee 2 years' notice, fix compensation, and provide for transfer to the United States of the project properties. The Commission would require the licensee or any other party to apply for any new license at least a year before the existing license expired.

In response to the notice of proposed rulemaking, we received comments from the Secretary of the Interior, American Public Power Association, Northwest Public Power Association, National Rural Electric Cooperative Association, Edison Electric Institute, and 19 licensees. We have given close attention to these 24 responses. Discussed below are the more significant comments and proposals and our action in response hereto.

The three trade associations representing publicly-owned or cooperative electric utilities maintain that Congress in section 14 of the Federal Power Act delegated the authority to recapture projects, but they disagree as to who is the recipient of the authority. According to the American Public Power Association and the National Rural Electric Cooperative Association, Congress conferred this power upon the Commission; according to the Northwest Public Power Association, upon the President.

We believe that the language and legislative history of section 14 do not support the contentions made by three associations. This section reads in pertinent part:

> Upon not less than two years' notice in writing from the Commission the *United States* shall have the right upon or after the expiration of any license to take over and thereafter to maintain and operate any project . . . [Emphasis added.]

In our opinion, this language, while reserving recapture rights to the United States, neither expressly nor implicitly delegates the power to exercise these rights to the Commission, the President, or any officer or agency of the Executive Branch.

Throughout the act, whenever Congress delegated authority, it expressly designated the recipient. Thus, in section 16 (16 U.S.C. 809), immediately following the sections on recapture and relicensing, the President is authorized to order the United States' take-over of any licensed projects "for the purpose of manufacturing nitrates, explosives, or munitions of war, or for any other purpose involving the safety of the United States, to retain possession, management, and control thereof for such length of time as may appear to the President to be necessary to accomplish said purposes . . ." Other sections of the act also expressly delegate authority to the President,[2] as well as to the Ex-

[2] Sections 1 and 2 (16 U.S.C. 792, 793).

ecutive departments generally,[4] and specific cabinet officers,[5] including the Secretary of the Interior.[6]

Moreover, the legislative history of sections 14 and 15 demonstrates Congress' intent to retain control of hydroelectric policy to be applied upon expiration of licenses. Many Congressmen in 1920 apparently thought that within the succeeding 50 years Congress would enact general legislation establishing procedures and standards for recapture and relicensing.[7]

In fact, of course, Congress has not taken any further action on recapture or relicensing. It might have delegated to us the power to authorize recapture, but it has not done so. Neither has it delegated the power to any other Federal authority. The power resides where it has always resided, in Congress, and in the absence of further legislation can only be exercised by action on a case-by-case basis as individual licenses expire.[8]

The Secretary of the Interior, admitting that only Congress may act to approve recapture and that the Commission may make recommendations to Congress on recapture, says "only that the Commission should not be the primary agency to make recommendations to Congress on the behalf of the Executive Branch of the Government." We recognize, of course, that we cannot speak for the Executive Branch and do not formulate Executive policy with respect to recapture. But in the light of the fact that the Commission has regulated licensed projects for decades and is required under section 14 to give notice before a project is recaptured, to determine the net investment and severance damages of the project, and to relicense the project if it is not recaptured, the Commission's duty to assist Congress in the question of whether to recapture can hardly be questioned. See also sections 7(b), 304(a) and 307(a) of the act (16 U.S.C. 800(b), 825(c), 825(f)).

We believe that we would be derelict in our duty if we did not keep Congress informed when licenses become subject to recapture and supply it with necessary factual information and expert analysis upon which it can make an informed judgment as to whether to exercise its recapture powers.

We have provided for securing the views of interested agencies of the Federal Government and for submitting them to the Congress with our report. These agencies remain free to provide the Congress with supplementary statements of their views if they wish.

The licensees generally did not question our authority to adopt the proposed rules, but a number of them recommended various changes in the proposed procedures which generally go to its details of execution rather than its fundamental conception. We have grouped these various recommendations for discussion in the sequence in which they would apply in the recapture or relicensing process.

---

[4] Section 4(c) (16 U.S.C. 797(c)).

[5] Secretary of the Army: sections 4(e), 11(a), 17(a), 18, 26 (16 U.S.C. 797(e), 804(a), 810(a), 811, 821); Secretary of Commerce (since transferred to the Secretary of the Interior): section 18 (16 U.S.C. 811); Secretary of the Department in which the Coast Guard is operating (now Secretary of the Treasury): section 18 (16 U.S.C. 811); Attorney General: sections 13 and 26 (16 U.S.C. 806, 820).

[6] Section 10(e) (16 U.S.C. 803(e)).

[7] *E.g.*, 59 Cong. Rec. 1438 (1920) (remarks of Senator Norris). See also Hearings Before the House Committee on Water Power, 65th Cong., 2d Sess. 32, 469 (1918). Similar statements were made with regard to the General Dam Act of 1910 (36 Stat. 593): H.R. Rept. 1160, 61st Cong., 2d Sess. 2 (1910); 45 Cong. Rec. 5684 (1910).

[8] Even if some authority could be spelled out of some general delegation to the President or an agency of the Executive Branch (and none of the respondents cite any such authority), it would be rendered virtually nugatory by the fact that recapture under the provisions of section 14 can only be accomplished upon the payment of the prescribed compensation of the licensee, which would require an appropriation by Congress.

I. *General*

A number of the licensee comments recommend that the term "take over" be substituted for "recapture," arguing that "take over," not "recapture," is used in sections 14 and 15 and that it more accurately describes what is involved. We believe that "recapture" has become virtually a term of art for the rights reserved to the United States under section 14. Although not used in the statute, the term appears in the hearings, reports, and debates on water power legislation and has been used by the courts. More importantly, "recapture" accurately describes the object of section 14—that the United States have an opportunity at the end of the license term to retake the project site upon the payment of the specified compensation. "Take over," on the other hand, suggests expropriation, which is not what section 14 provides.

II. *Gathering Information*

One licensee proposes that the governor and the appropriate agencies of the state or states in which the project is located be notified of all proceedings before the Commission. We have adopted this proposal.

Three licensees ask that the Commission solicit the licensee's statement concerning the effect of recapture upon its financial condition the dividends paid its stockholders, the rates charged its customers, and the taxes collected by the local, state, and Federal governments. Since such materials among others may be germane to the question whether a project should be recaptured, they should be filed for our consideration.

Four licensees ask that Federal agencies and other interested parties serve the licensee with their submissions. Two of these add that the staff should serve the licensee with any report which it might make to the Commission. A third states that the Commission's recommendation to Congress should be sent to the licensee. We have altered the rulemaking to provide that: (1) all formal submissions will be served upon the licensee, and (2) a copy of the Commission's recommendation to Congress will be sent to the licensee. However, the staff reports to the Commission prior to its determination of the recommendation to be submitted to Congress are internal agency memoranda which, like other such documents, will not normally be made public.

Some of the comments suggest that the licensee be allowed to respond to the recommendations of interested parties other than agencies.[9] One says that the licensee should have an opportunity to amend its plans in response to agency recommendations. Another requests an opportunity to respond to the Commission's recommendation before it is submitted to Congress. We have altered the rule to expressly permit the licensee to respond to any comments recommending recapture. In formulating our recommendation to Congress, we of course will consider any timely-filed amendments to the licensee's plans for future development and use of the project. Since the licensee, if it takes exception to the Commission's recommendation, will be free to state its views to the appropriate Congressional committees, we believe that we need not afford the licensee an opportunity to respond to the recommendation before it is sent to Congress.

Thirteen parties ask for a provision for a hearing; some of these believe that a hearing should or must be granted at the licensee's request. When the Commission gathers information for recommending legislation to Congress, there is no statutory or Constitutional requirement that it provide a hearing for in-

[9] As it appeared in the notice, the rulemaking expressly permitted response to "agency comments recommending recapture" but said nothing about response to other comments.

terested parties, though it may in its discretion do so. We believe that any automatic provision for a hearing either of an evidentiary nature or by way of oral argument would not be appropriate, and would tend to delay our reports to Congress unduly, but of course we reserve the right to provide for an evidentiary hearing where it appears that it would be useful. We will hold oral argument at the request of the licensee whenever an interested Federal agency has requested the Commission to recommend recapture to Congress.

III. *Recommendation to Congress*

Nine parties suggest that, in addition to the materials specified in the notice of proposed rulemaking, the Commission send to Congress: (1) recommendations of parties other than Federal agencies, (2) staff reports to the Commission, (3) licensee's response to others' recommendations, (4) licensee's estimated claim for compensation, (5) a transcript of any hearings, and (6) a digest of the record. We have altered the rules which we are here adopting to provide that the Commission's recommendation to Congress will be accompanied by all the submissions of interested Federal agencies and the licensee plus such other material of record as in the Commission's judgment might be useful to Congress.

IV. *Giving Notice*

Section 14 provides that the Commission shall give the licensee "not less than 2 years' notice" of recapture of its project by the United States. This language, as many of the licensees point out, authorizes the Commission to give a period of longer notice; some suggest that this period should be as long as necessary for the licensee to find a replacement for the generating capacity of the recaptured project; others merely stated that more than 2 years would generally be necessary.

Five licensees suggest that when more than 2 years is required to replace the recaptured project, the Commission both recommend to Congress and itself provide an appropriate longer notice: If Congress' and the Commission's periods are not the same, the licensee should be given the longer of the two. Finally, a suggestion is made that the notice period should run, not from Congress' authorization for recapture of the project, but from its appropriation of funds. The comment in question notes that if the notice period runs from recapture, the licensee is put in a quandry: it risks either the building of a replacement facility which may never be needed or the losing of a project before a replacement facility is available.

If Congress recaptures a project, it may fix the date for transferring the project properties to the United States. If Congress does not specify a date, the Commission, we believe, is authorized under section 14 to specify the date and to give sufficient notice to allow the licensee to secure an alternate source of power. Accordingly, we have altered the rulemaking to provide that when Congress recaptures a project without fixing the date, the Commission will give appropriate notice of not less than 2 years. We think that under section 14 notice must be given from Congress' authorization of recapture rather than its appropriation of funds for compensation. It is clear that once Congress has authorized recapture the basic question has been decided and the subsequent appropriation, which must await the Commission's precise determination under section 14 of the recapture payment, presumably will follow in due course.

V. *Fixing Compensation*

Ten licensees ask that compensation for recaptured projects licensed before the amendment of section 14 in 1935 be fixed by the procedures specified in the

original section rather than in the amended section. The original section provided that a United States District Court fix compensation if the licensee and the Commission could not agree. The amended section provides that the Commission fix compensation after notice and opportunity for hearing.[10] The parties contend that the original section controls for pre-1935 licensees because of section 6, providing that licenses may not be altered without the licensee's consent, and section 28, providing that amendments of the act will not affect previously issued licenses or the licensee's rights thereunder.

The legislative history shows that the amendment of section 14 in 1935 was in response to *Keller* v. *Potomac Electric Power Company*, 261 U.S. 428 (1923), which was thought to cast doubt on the constitutionality of a District Court's determining compensation for recapture.[11]

Subject to certain limitations not here in point, Congress has discretion to provide the civil procedure for the enforcement of substantive rights. Constitutional or statutory provisions against retroactive legislation do not bar Congress from changing the procedure for vindicating such rights. Since the designation of a forum for fixing compensation in accordance with a statutorily prescribed standard is manifestly a matter of procedure, sections 6 and 28, which bar changes in substance, do not prevent Congress from providing that the Commission will fix the compensation for all recaptured projects, including those licensed at the time a different procedure was in effect.

VI. *Transfer of the Project to the United States*

Two licensees request an assurance that the licensee need not transfer the project to the United States until payment according to a final adjudication under the provisions of section 313 of the Federal Power Act for appeal to the courts of Commission orders. Under section 14 of the act, transfer of the project is to occur upon tender of compensation as fixed by the Commission. We believe that this provision clearly disposes of the effective date of recapture. Obviously, a licensee may claim a higher payment, but the licensee clearly does not have any automatic right to delay application of recapture while litigation to determine whether a sum greater than that fixed by the Commission is pending in the courts.

A number of parties request that all reference to applications for annual licenses be deleted because section 15 provides that the Commission automatically will issue such licenses after expiration of the original license until the project is recaptured or a new license is issued. We have altered the rule to make clear that if, upon expiration of the original license, Congress has not authorized recapture or the Commission has not issued a new license, the Commission will issue annual licenses pending consideration of an application by the original licensee for a new license.

For the reasons set forth above and upon consideration of the entire record in this proceeding, *the Commission finds:*

It is appropriate and in the public interest in administering Part I of the Federal Power Act to establish procedures with respect to the recapture or

---

[10] A comparative print of the pertinent part of section 14's 1935 amendment reads: "The net investment of the licensee in the project or projects so taken and the amount of such severance damages, if any, shall be determined by agreement between the Commission and the licensee, and in case they cannot agree, by proceeding in equity instituted by the United States in the district court of the United States in the district which any such project may be located: *by the Commission after notice and opportunity for hearing.* [Underlined words are deletions; italicized words are additions.]

[11] S. Rep. No. 621, 74th Cong., 1st Sess. 46 (1935); H.R. Rept. No. 1318, 74th Cong., 1st Sess. 25 (1935). See also: Hearings on 1935 Public Utility Act Before House Interstate and Foreign Commerce Committee, 74th Cong., 1st Sess. 390, 487–488 (1935).

relicensing of projects upon expiration of their licenses by amending our General Rules and Regulations under the Federal Power Act as follows.

Under the authority of the Federal Power Act, especially sections 14, 15, and 309 (16 U.S.C. 807, 808, 825h) *the Commission orders:*

(A) Part 2, General Policy and Interpretations, Chapter I of Title 18 of the Code of Federal Regulations, is amended by adding a new section 2.6 to read as follows:

§ 2.6 Procedure for recapture or relicensing of licensed projects. (See Part 16 of this chapter)

(a) Starting in 1970, numerous licenses for projects subject to recapture will expire. So that Congress may have an adequate opportunity to decide whether, upon expiration of licenses, the United States will recapture any of these projects under section 14, and so that the licensees and others may have adequate notice and opportunity to file timely applications for a new license under section 15, the Commission each year will publish in its annual report and in the Federal Register a table showing the projects subject to recapture during the succeeding five years. The table will list these licenses according to their expiration dates and will contain the following information: (1) license expiration date; (2) licensee's name; (3) project number; (4) type of principal project works licensed, *e.g.*, dam and reservoir, powerhouse, transmission line; (5) location (by state and stream; also by city or county when appropriate); and (6) installed capacity.

(b) Five years before a license expires for a project subject to recapture the Commission will solicit from the Secretaries of Army, Interior, Agriculture, Health, Education, and Welfare, and other appropriate Federal agencies recommendations and supporting information, to be furnished within a year, concerning recapture or relicensing the project. The agencies will be asked to demonstrate how any recommended recapture action will serve their respective programs and policies. The Commission simultaneously will solicit, also for submission within a year, the licensee plans for future development and use of the project and its statement concerning the effect of recapture upon its financial condition, the dividends paid its stockholders, the rates charged its customers, and taxes collected by local, state, and Federal governments. All formal submissions to the Commission will be served upon the licensee. An opportunity will be afforded to the licensee to respond to any comments recommending recapture. The Commission will hear oral argument at the request of the licensee whenever an interested Federal agency has requested that the Commission recommend recapture. After considering these various documents and hearing oral argument, if any, the commission will forward to Congress at least 2 years before the license expires its recommendation, with a copy to the licensee, as to whether the project should be recaptured by the United States, accompanied by all submissions to the Commission by Federal agencies and the licensee plus such other material of record as in its judgment might be useful to Congress.

(c) Should Congress authorize recapture, the Commission immediately will give the licensee notice as Congress directs or as appropriate, but not less than 2 years, and, unless Congress otherwise provides, will direct the licensee to present to the Commission within a specified period a claim for compensation consistent with the provisions of section 14 of the Federal Power Act. It also will require, unless Congress otherwise provides, that upon tender of compensation as fixed by the Commission the licensee transfer

to the United States, in such manner as the Commission may direct, possession and title to the project properties.

(d) If Congress authorizes recapture of a project, the Commission will dismiss any pending application for a new license for the project. In addition, the Commission in its discretion may dismiss any application for a new or annual license which is not filed at least a year before the license expires, and any such application so dismissed will be eligible for refiling only after a decision on any timely filed application. If at the end of a license term Congress has not authorized recapture, the Commission may proceed to issue a new license for the project and, pending consideration of an application by a licensee for a new license, will issue annual licenses to the licensee. [Secs. 14, 15, 309 (16 U.S.C. 807, 808, 825h)]

(B) Part 16, Chapter I of Title 18 of the Code of Federal Regulations, is amended by amending §§ 16.1 and redesignating it 16.2, deleting § 16.2 and adding new §§ 16.1, 16.4, and 16.5. As so amended Part 16 will read as follows:

Part 16—Application for License for Project Under License Which Expires on Specified Date

§ 16.1 Purpose and coverage.

This part implements the general procedure, as set out in § 2.6 of this chapter, for relicensing projects upon expiration of the license in the event that Congress does not elect to recapture the project for the United States. This part, however, applies as well as to relicensing of projects not subject to recapture.

§ 16.2 Contents.

Unless otherwise specified, any licensee or other applicant for a new or annual license shall submit an original and ten conformed copies of the application, duly subscribed and verified under oath, and all accompanying documents, together with one additional conformed copy for each interested State Commission. The application shall set forth in appropriate detail the following information in the order indicated:

(a) The exact name of the applicant.

(b) The license number of the project.

(c) The location of the project.

(d) The date on which the license expires.

(e) If the licensee is a corporation, a list of the officers and directors.

(f) The name, title, and post-office address of the person to whom correspondence in regard to the application shall be addressed.

(g) A brief description of the project works and operations of the project.

§ 16.3 Additional information.

The Commission may require additional information when it appears to be pertinent in a particular case.

§ 16.4 Project alterations.

Where an applicant for a new license intends to make changes or additions to the project works of a project, they shall be fully described in the application and shown on any accompanying exhibits.

§ 16.5 Filing date.

Any application for a new or annual license filed later than one year before the expiration date of the license may, in the Commission's discretion, be dis-

missed without prejudice and will be eligible for refiling only after a decision on any timely filed application.

[Secs. 14, 15, 309 (16 U.S.C. 807, 808, 825h)]

(C) The amendments prescribed herein will be effective from November 1, 1964.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GRAEAGLE LAND AND WATER COMPANY, PROJECT NO. 1302

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued October 7, 1964)

Application was filed on May 15, 1964, by Graeagle Land and Water Company (Applicant) under Section 6 of the Federal Power Act (Act) for surrender of its license for major Project No. 1302 located at the outlet of Long Lake, a headwater of Gray Eagle Creek which in turn is a tributary of Feather River, and affecting lands of the United States within the Plumas National Forest in Plumas County, California.

According to the application, no further power was generated after July 8, 1963. Long Lake will be used solely for storing water for domestic, industrial and irrigation purposes, and Applicant intends to apply for a Special Use Permit from the Forest Service following Commission acceptance of surrender of the license.

The Forest Service, which transmitted the application for surrender to the Commission, has advised that the power generation was stopped as of July 8, 1963, that the project works had been removed, and that the project area had been restored to a condition satisfactory to the Service.

Annual charges under the license have been paid through December 31, 1963, and Applicant's copy of the license was returned with the application.

The Commission finds:

Acceptance of surrender of the license for the project is appropriate.

The Commission orders:

Surrender of the license for Project No. 1302 is hereby accepted, effective as of December 31, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH BELOIT WATER, GAS AND ELECTRIC COMPANY, PROJECT NO. 2373

ORDER ISSUING LICENSE (MINOR)*

(Issued October 7, 1964)

Application was filed on May 29, 1963, by South Beloit Water, Gas and Electric Company (Applicant) of Madison, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2373, known

*Rehearing denied by order issued February 17, 1965, 33 FPC 275.

as the Rockton Plant, located on Rock River in the Village of Rockton, Winnebago County Illinois.

A water power project has been in operation at this location for over a hundred years. The present power generating facilities were constructed in 1928, and 1929. In its order issued August 10, 1964, 32 FPC 575, for Project No. 2346, the Commission found that the Rock River from its mouth to at least Janesville is a navigable waterway of the United States. The Rockton Plant is situated below Janesville. For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962, and a termination date of December 31, 1993.

The Secretary of the Army and the Corps of Engineers, have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain considerations in the interest of fish and wildlife resources.

The Department of Health, Education, and Welfare has advised that there are no known pollution or vector control problems created or intensified by the project, and none is anticipated.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Illinois, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not effect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,600 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; (4)(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to South Beloit Water, Gas and Electric Company (Licensee) of Madison, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2373, located on Rock River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2373 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A rockfill overflow type dam 1000 feet long, with concrete covering; five 10 by 14 feet tainter gates at head of canal; powerhouse of brick superstructure 31 by 64 feet long; a siphon spillway built integrally with the powerhouse passes excess flow in canal; powerhouse contains 2 water wheels, one a 1050 horsepower operates under a normal head of 11 feet, the other a 750 horsepower operates under a normal head of 10.5 feet, and are connected to two Westinghouse generators 750 kva and 625 kva, respectively: the total capacity is 1200 kw; and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $80.00.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby excluded from the license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NO. 2347

ORDER ISSUING LICENSE (MINOR)*

(Issued October 7, 1964)

Application was filed on March 1, 1963, by Wisconsin Power & Light Company (Applicant) of Madison, Wisconsin, for a license under Section 4(e) of

*Rehearing denied by order issued February 17, 1965, 33 FPC 275.

the Federal Power Act (Act) for constructed minor Project No. 2347, known as the Janesville Central Plant, located on the Rock River, in the City of Janesville, Rock County, Wisconsin.

A project has been in operation at the present site for over 50 years. The present facilities were constructed in 1926 and 1927. In its order issued August 10, 1964, 32 FPC 575, the Commission found that the Rock River from its mouth to at least Janesville is a navigable waterway of the United States. For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Secretary of the Army and the Corps of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interests of fish and wildlife resources.

The Department of Health, Education and Welfare has reported that there have been no apparent water supply, water quality, or vector control problems created or intensified by the project, and none is anticipated.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 670 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Wisconsin Power & Light Company (Licensee) of Madison, Wisconsin, under Sections 4(e) and (10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2347, located on Rock River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated herein as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2347 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) a 206 feet long overflow type timber and concrete dam, sluice with needles between powerhouse and dam; a 79 feet 4 inches by 27 feet 6 inches brick and concrete structure powerhouse containing two Leffel turbines rated at 384 horsepower each and connected to two 312.5 kva alternators and all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $34.00.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NO. 2348

ORDER ISSUING LICENSE (MINOR)

(Issued October 7, 1964)

Application was filed on March 1, 1963 by Wisconsin Power & Light Company (Applicant) of Madison, Wisconsin, under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2348, known as the Beloit Plant, located on Rock River, in the City of Beloit, Rock County, Wisconsin.

The project with the present head of 9 feet, has been in operation for at least 90 years. The present powerhouse facilities were constructed in 1927 and 1928. In its order issued August 10, 1964, 32 FPC 575, the Commission found that the Rock River from its mouth to at least Janesville is a navigable waterway of the United States. The Beloit Plant is situated below Janesville. For the reasons set forth in Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interests of fish and wildlife resources.

The Secretary of the Army and the Corps of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of Health, Education and Welfare has reported that the project will not have any adverse effect on matters affecting that Department.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Wisconsin and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protest or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 500 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b) except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10 (c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair values.

The Commission orders:

(A) This license is hereby issued to Wisconsin Power & Light Company (Licensee) of Madison, Wisconsin, under Sections 4(e) and 10(i) of the Act,

for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2348, located on Rock River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2348 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A 287 feet long concrete dam with stop logs on a portion of the crest, needles on another section. Two tainter gates 30 feet by 15 feet 9 inches high. A powerhouse approximately 37 feet by 34 feet 6 inches. The powerhouse contains a 380 kw unit operating under a normal head of 9 feet and all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests therein, the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $25.00.

(D) The terms and conditions of the Act, which it has been found herein to be in the public interest to waive, are hereby excluded from the license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF WRANGELL, ALASKA, PROJECT NO. 2313

ORDER EXTENDING PERIOD OF PRELIMINARY PERMIT

(Issued October 7, 1964)

Application was filed on July 29, 1964 by the City of Wrangell, Alaska, permittee for proposed Project No. 2313, for 1-year extension of the preliminary permit issued for a period of 2 years, effective as of January 1, 1963.

The permittee advises that the proposed Mill Creek and Virginia Lake Hydroelectric Project is being studied under the permit and is in the planning stages, and that all cooperative undertakings with the involved fishery agencies and Forest Service will be complied with during the planning stages under the permit.

The Commission finds:

It is not inconsistent with the public interest to extend the period of the preliminary permit, as hereinafter provided.

The Commission orders:

The period of the preliminary permit for proposed Project No. 2313 is hereby extended for a period of 1 year through December 31, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE ATLANTIC REFINING COMPANY, DOCKET NOS. G-9283 AND G-9284, ET AL.[1]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued October 8, 1964)

There is before us for consideration a Motion for Approval of Settlement Proposal, Termination of Rate Proceedings, and for Shortened Procedure Certification filed on May 7, 1964, as amended on July 31, 1964, by Atlantic Refining Company (Atlantic) encompassing the rates for 124 of Atlantic's currently effective FPC Gas Rate Schedules. Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration. In summary, the settlement proposal as filed by Atlantic provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings with two exceptions hereinafter discussed;

(2) Atlantic waives the right to file for contractually authorized increase rates until August 1, 1967, for all of the rate schedules involved in the settlement. However, Atlantic reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Atlantic will delete any favored nation and price redetermination clauses contained in its Rate Schedule Nos. 5, 48, 49, 124, 148, 152 and 159, and additionally will delete the periodic pricing provisions in its Rate Schedule Nos. 6, 32, 125, 151, 181, 187 and 246;

(4) Refunds with interest at the applicable rates, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with December 1, 1961, to the date of issuance of this order for all of Atlantic's rate schedules.

(5) Exclusion from the settlement proposal of sales in the Permian Basin; 25 sales related to previous offers of settlement accepted by the Commission; 1 sale to another producer whose resale rate is under suspension; 5 sales consolidated in certificate proceedings that are presently before the Commission and

[1] The additional dockets involved herein are set forth in Appendices A, B, and C, attached hereto.

those matters relating to Rate Schedule Nos. 118, 147 and 150 together with their pending Section 4(e) proposed rate increase in Docket No. G–17741.[2]

With respect to refunds, the parties to the settlement conference utilized cost of service studies and revenues based on contract rates to determine Atlantic's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after December 1, 1961. Applicable interest shall be paid on all of the refunds through July 31, 1964. Such refunds will be approximately $4,766,470, exclusive of interest. Atlantic's future revenues will be decreased approximately $3,216,000 annually as a result of the settlement.

The purchasers of gas under the various rate schedules to which this settlement proposal relates are all natural gas pipe-line companies subject to our jurisdiction under the Natural Gas Act, and many of such purchasers in turn have customers who are natural gas pipelines. Some of these pipeline customers of Atlantic or Atlantic's customers are required under express provisions of outstanding orders of this Commission to flow-through to their customers all or any part of the refunds they may receive from Atlantic as a result of this settlement; others may choose so to do in the absence of such express provisions. For all of the reasons set forth in our order in *Humble Oil & Refining Company*, Docket Nos. G–9287 and G–9288, *et al.*, 32 FPC 49 order issued July 8, 1964, we shall require Atlantic to retain the amounts of refunds ordered herein until further order directing the nature of their disposition[3] and also to submit within 45 days of this order to the Commission and each customer a detailed report setting out, by purchasers, the amount of refund related to each rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct each of the pipeline purchasers within 10 days from the receipt of such report, to submit a report of their own setting forth whether they intend to pass on all or part of such refund amounts to their customers and the names of such customers and amounts of refund each would receive, or, if they claim the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Atlantic (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Atlantic (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

Settlement rates which are exceptions to the applicable area ceiling are proposed by Atlantic for sales to Tennessee Gas Transmission Company (TGT) and to United Fuel Gas Company (United Fuel) in South Louisiana.[4] The

---

[2] Atlantic does not propose a settlement of the 4(e) proceedings involving Rate Schedule Nos. 118, 147 and 150, or the termination of any refund obligations thereunder but will supersede the existing rates of 23.55¢ per Mcf with a rate of 17.5¢ per Mcf to be effective August 1, 1964.

[3] Exempted from this requirement are the refunds to be made to Colorado Interstate Gas Company, El Paso Natural Gas Company and Arkansas Louisiana Gas Company, since the amount of refunds to those companies is *de minimis*.

[4] TGT and United Fuel were each represented at the settlement conferences and each actively participated therein.

sale to TGT is made under Atlantic's FPC Gas Rate Schedule No. 3 in the Bayou Sale Field, St. Martin Parish. Atlantic proposes to add substantial reserves under this schedule. In 1958 Atlantic dedicated 333 Bcf of natural gas to TGT from specific reservoirs in the field. Subsequently, it has developed approximately 83 Bcf of additional reserves which it will dedicate to TGT. Additionally, it will renegotiate its contract to eliminate the favored nation and price redetermination provisions therefrom; provide for a 1¢ per Mcf price escalation through 1981; extend the make-up period to February 26, 1971; provide for no increase in TGT's take or pay obligation under the contract until January 1, 1968, and increase the "swing" provision from 100% to 125% of deliverability. The circumstances surrounding this sale to TGT are similar to those we considered regarding a sale made by *Cities Service Production Company* in our order approving its general rate settlement in Docket No. G–9510, *et al.*, 28 FPC 1114 (order issued December 26, 1962) and we there approved an exception to the applicable area ceiling. Therefore we here approve Atlantic's proposed reduction in its presently effective rate from 22.8333¢ to the settlement rate of 17.5¢ per Mcf.

The sale to United Fuel is made under Atlantic's FPC Gas Rate Schedule No. 63 in the Midland Field, Acadia Parish. This sale is made under a contract dated January 5, 1953, and is for a 20 year period. Between 1956 and 1961 Atlantic has added approximately 64 Bcf of natural gas by dedication of reserves to this contract. Subsequent to 1956 Atlantic increased the area dedication adding new productive horizons which increased the reserves by approximately 352 Bcf of gas. This additional dedication of reserves and acreage subsequent to our assumption of regulation of independent producers caused us to grant an exception to the applicable area ceiling in the general rate settlement in *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837 (order issued April 25, 1963) and for the same reasons we approve Atlantic's proposed reduction of the presently effective rate of 21.1¢ to 19¢ per Mcf.

The settlement proposal includes rates for which issuance of related permanent certificates is pending, some of which are for sales presently being made under temporary certificates.[5] We shall set such applications for abridged hearing in accordance with Section 7 of the Natural Gas Act, providing that the settlement rates shall be the initial rates.

Additionally, included in the settlement proposal is a pending certificate application for a sale by Atlantic in Texas Railroad Commission District No. 4 to South Texas Natural Gas Gathering Company under Atlantic's FPC Gas Rate Schedule No. 283 in the Schmidt Field. This sale is presently involved in the *Turnbull & Zoch Drilling Co. (Operator), et al.*, proceedings, Docket No. G–17960, which are presently in hearing before a presiding examiner. Testimony and evidence have been introduced regarding such sale, and we deem it proper, in this instance, to omit the sale from the settlement and make the rate contingent upon the final order issued in such proceeding.

On August 14, 1964, the Pennsylvania Public Utility Commission (PUC) filed its comments in answer to Atlantic's amended motion. PUC's comments regarding Atlantic's proposal are similar to those considered by us in *Humble (supra)* and we there set forth our reasons for approval of that general rate settlement. The same reasons pertain here. We consider the reduction and stability in rates for the moratorium period gained by each of the settlements we have approved to be of great value to the public. As we noted in Humble, each settlement is approved subject to the applicable area rate proceedings. Pending

[5] Docket Nos. G–9980, CI60–459, CI61–291, CI61–482 and CI63–1490.

final disposition of these proceedings certainty is gained in large measure by settlement. Our approval of Atlantic's proposal results in Atlantic refunding approximately 56% of the amounts it has collected subject to refund above the settlement rates and the reduced rates of approximately $2,892,000 annually will constitute disallowance of approximately 65% of the increased rates currently being collected in Section 4(e) proceedings. In addition, approximately $324,000 annual reduction will result from reduction of rates under two sales being made under temporary certificates and five sales where the settlement rates are reduced below the "last firm rate."

We believe that the principles underlying the present settlement proposal are consistent with these utilized in previous major independent producer rate settlements.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Atlantic's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described, herein, as more fully set forth in the Settlement Proposal filed by Atlantic on May 7, 1964, as amended July 31, 1964, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal, filed by Atlantic on May 7, 1964 and as amended on July 31, 1964, is approved.

(B) The applicable settlement rates set out in Appendix A hereto are approved, and such rates shall be effective as of September 1, 1964 except for Rate Schedule Nos. 118, 147 and 150 wherein the rates shall be effective as of August 1, 1964.

(C) The approved settlement rates shall be applicable during the moratorium period herein provided for to all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Atlantic, its successors or assignees.

(D) Atlantic shall compute the difference between the rates collected subject to refund and the related settlement rates or rate not subject to refund whichever rate is the greater for the period from December 1, 1961, to the date of this order, together with interest as specified in each docket to July 31, 1964. Atlantic shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on each of the purchasers involved, setting out by purchasers the amount of refunds related to each rate schedule (showing separately the principal and applicable interest), the bases used for such determination and the periods covered.

(E) Atlantic shall retain the amounts shown in the report required under paragraph (D) above, subject to further order of the Commission directing the disposition of those amounts, *provided*, however, Atlantic shall within 90 days from the date of this order, (1) refund with interest as specified in each

docket computed to July 31, 1964, the difference between the rates collected subject to refund and the related settlement rates, on and after December 1, 1961, to the date of this order for all of such of Atlantic's Rate Schedules, where the rates were collected subject to refund for sales of natural gas to Colorado Interstate Gas Company, El Paso Natural Gas Company and Arkansas-Louisiana Gas Company and (2) report to the Commission in writing, the amount of refunds made to Colorado Interstate Gas Company, El Paso Natural Gas Company and Arkansas-Louisiana Gas Company showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the settlement proposal as approved herein.

(F) If Atlantic elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from November 25, 1964, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(G) If Atlantic elects to deposit the retained refunds in a special escrow account, Atlantic shall tender for filing on or before November 25, 1964, an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Atlantic and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Atlantic, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursment shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(H) The pending certificate proceedings in Docket Nos. G–9980, CI60–459, C161–291, C161–482 and C163–1490 set out in Appendix B hereto shall not be

terminated on the basis of the approval of the settlement proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(I) Within 90 days from the date of this order, Atlantic shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposals.

(J) Upon full compliance by Atlantic with all the terms and provisions of this order, the Section 4(e) proceedings listed in Appendix A hereto, except those related to Rate Schedule Nos. 118, 147 and 150, and the Section 5(a) proceedings in Docket Nos. G–9283 and G–9284 shall terminate.

(K) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with Paragraph (J) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61–2, AR64–1, and AR64–2, respectively; the Section 7(c) proceedings listed in Appendix C are hereby severed from their respective consolidated proceedings, and the consolidation order issued September 23, 1960, in Docket No. G–9283, *et al.*, is rescinded.

(L) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Atlantic, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Atlantic or any other companies, person or parties affected by this order.

APPENDIX A

(A) Application for certificate. Permanent certificate not issued.

[31] Supplement No. 3 to Rate Schedule No. 203 consolidated in Sunray DX proceeding; omitted from Settlement Proposal.
[32] Settlement Rate pursuant to terms and conditions of FPC Opinions No. 390 and 390-A.

[1] Includes 0.21931¢/Mcf for dehydration by seller.
[2] Filed for 17.7806¢/Mcf; effective 7-20-64 in RI64-600. (18.0¢-.21931¢ dehydration charge by buyer.)
[3] Filed for 15.0¢/Mcf; effective 6-1-64 in RI64-418.
[4] 16.01780¢/Mcf less 0.21931¢/Mcf for dehydration plus 0.15167¢/Mcf tax reimbursement equals 15.95016¢/Mcf.
[5] Filed for 19.33333¢/Mcf, including tax reimbursement, less 0.21931¢/Mcf for dehydration equals 19.11402¢/Mcf; effective 7-20-64 in RI64-600.
[6] Filed for 19.33333¢/Mcf, including tax reimbursement; effective 7-20-64 in RI64-600.
[7] Filed for 16.95016¢/Mcf, including tax reimbursement, plus 0.21931¢/Mcf for dehydration, equals 17.16947¢/Mcf, effective 6-1-64, in RI64-424. Consolidated in RR Comm. Dist. No. 3 proceedings.
[8] Includes tax reimbursement and dehydration charge by seller.
[9] Settlement Rate for term of contract.
[11] No producing properties currently active.
[12] Pursuant to terms of settlement proposal.
[13] Prices reduced 0.5¢/Mcf for amortization.
[14] Prices reflect 0.75¢/Mcf dehydration charge by buyer.
[15] Btu adjustment operates proportionally downward and at 1/100¢/Mcf/Btu upward from 1,000 Btu/cf., maximum upward Btu adjustment at 1,200 Btu/cf.
[16] Btu adjustment operates proportionately upward and downward from 1,000 Btu/cf.
[17] Btu adjustment operates proportionately upward and downward from 1,000 Btu/cf; maximum upward Btu adjustment at 1,200 Btu/cf.
[18] Filed for 17.6¢/Mcf. Suspended 10-10-64 in RI64-705. FPC Order dated 4-29-64.
[19] Filed for 17.6¢/Mcf. Suspended to 8-22-64 in RI64-644.
[20] Btu adjustment operates at 1/100¢/Mcf/Btu upward and downward from 1,000 Btu/cf. Maximum upward Btu adjustment at 1,200 Btu/cf.
[22] Filed for 17.5¢/Mcf. Suspended to 6-1-64 in RI64-418.
[24] Filed for 17.6¢/Mcf. Suspended to 8-26-64 in RI64-644.
[25] Settlement Rate applicable to application adding acreage filed 3-2-64 with the Federal Power Commission.
[26] Subject to conditions in temporary authorization issued 8-5-63 in CI63-1490.
[27] Rate Schedule No. 281 superseded Rate Schedule No. 16.
[28] 13.0¢/Mcf effective 7-17-59 per supplement No. 1 to Rate Schedule No. 16 (Mesaverde Formation gas only).
[29] Filed for 13.0551¢/Mcf. Suspended to 6-23-64 in RI64-546 (Mesaverde Formation gas only).
[30] Rate Schedule No. 281 includes price for Pictured Cliffs Formation gas at 12.0500¢/Mcf. No Pictured Cliffs gas production.
[31] 13.0¢/Mcf including tax reimbursement.
[32] Pictured Cliffs gas. Liquid payment provisions of contract to operate to gross price of 13.0¢/Mcf.
[33] 13.0¢/Mcf includes tax reimbursement. Settlement rate subject to 3.0¢/Mcf line amortization charge by buyer pursuant to contractual arrangements.
[34] Price increase application filed 11-21-63. Suspended to 6-1-64 in RI64-454.
[35] Docket No. G-17741. Pursuant to the terms of the settlement offer, this docket is not terminated and will remain consolidated with Docket No. AR61-2 et al.
[36] Depleted. Rate schedule canceled 7-18-63. Supplement No. 3 subject to refund in Docket No. G-17741.
[37] Initial price of 17.0¢/Mcf certificated by FPC order dated 11-27-63; suspension dockets subject to refund.
[38] Rate includes tax reimbursement and is subject to .21931¢ dehydration charge by buyer.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-306

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued October 8, 1964)

On June 23, 1964, as amended and supplemented on July 9 and July 27, 1964, respectively, Cities Service Gas Company (Applicant), First National Building, Oklahoma City 1, Oklahoma, filed in Docket No. CP64-306, an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission to abandon facilities and for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce to the Lakeview Alfalfa Dehydrator Plant of National Alfalfa Dehydrating and Milling Company (National) in Douglas County, Kansas, all as more fully set forth in the application.

Applicant in order to continue to serve the present and future requirements of the Lakeview plant proposes to construct and operate a tap on its Lawrence Power Plant 16-inch pipeline, and a 3-inch pipeline extending 8,000 feet from that point to the Lakeview plant, together with metering and regulating facilities at the terminal point thereof. Applicant proposes to sell and deliver on an interruptible basis up to an estimated maximum day of 800 Mcf of natural gas, the estimated natural gas requirements of the existing and future proposed alfalfa dehydrator plants of National near Lakeview, Douglas County, Kansas.

Applicant has been selling volumes of natural gas to National (or its predecessors) since March 1947 for use in its Lakeview plant, with deliveries being made at Applicant's metering and regulating station for further transportation by National through National's pipeline to its said plant. Due to the deterioration of National's line, and at National's request for additional service the facilities herein proposed are necessary.

Applicant proposes to reclaim existing metering and regulating facilities proposed to be abandoned presently located at the point of connection between Applicant's Lawrence Power Plant 16-inch pipeline and National's present 3-inch pipeline in the SE¼ of the SW¼ of Section 14, Township 12 South, Range 19 East, in Douglas County, Kansas, upon completion of the facilities proposed herein.

The total estimated cost of the proposed facilities (with allowance for a salvage credit of $1,800) is $14,380, and will be defrayed from treasury cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented and amended, has been filed.

At a hearing held on October 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and amendment submitted in support of the authorizations sought herein, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1948, in Docket No. G-298 (4 FPC 471).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application, supplement and amendment filed in the proceeding are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities, and the transportation and sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, supplement and amendment filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, and the transportation and sale of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application, supplement and amendment in this proceeding, are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities, and the transportation and sale of natural gas to National of a volume not to exceed 800 Mcf daily, as hereinbefore described, all as more fully described in the application, supplement and amendment thereto, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities hereby authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

(F) The certificate issued by paragraph (B) above is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Cities Service Gas Company for firm resale service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP65-43

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 8, 1964)

On August 10, 1964, East Tennessee Natural Gas Company (Applicant) filed in Docket No. CP65-43 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Elk River Public Utility District (Elk River), an existing customer, at a new delivery point near Tullahoma, Tennessee, for resale to Arnold Engineering Development Center (AEDC). Applicant further proposes to construct and operate approximately 0.4 mile of 8-inch lateral line and a metering and regulating station at the point of delivery (the terminus of said lateral), all as more fully set forth in the application.

Elk River has advised Applicant that it will construct approximately 8.5 miles of 8-inch line and appurtenant facilities at an estimated cost of $250,000 to serve the gas requirements of AEDC, an experimental testing center of the U.S. Air Force, which will use gas to heat large volumes of air in connection with its testing programs. AEDC's firm requirements are estimated at 500 Mcf of gas per day at 14.9 psia (506 Mcf at 14.73 psia). Applicant proposes to provide an additional volume of 9,000 Mcf of natural gas on an interruptible basis to meet AEDC's total requirements up to 9,500 Mcf per day.

The estimated cost of construction of Applicant's proposed facilities is $40,000, which cost will be defrayed out of general funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 8, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) The Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knoxville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 30, 1948, in Docket No. G-889 (7 FPC 5).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas by Applicant to Elk River Public Utility District, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the sale and delivery of natural gas to Elk River Public Utility District, as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

(D) The facilities authorized by the certificate issued by paragraph (A) above shall not be utilized to transport more than 500 Mcf of firm gas daily and 9,000 Mcf of interruptible gas daily to AEDC.

(E) Applicant shall file with the Commission a new service agreement with Elk River showing the additional volumes of natural gas to be sold and delivered to AEDC.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE SUPERIOR OIL COMPANY, DOCKET NO. G-6067

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued October 8, 1964)

On August 10, 1964, The Superior Oil Company (Superior) filed a motion for reconsideration of the Commission's Opinion No. 437 and accompanying order issued July 23, 1964, 32 FPC 241, in the above-entitled matter, in which the Commission granted Superior's motion to substitute supply sources under a previously issued certificate upon condition that the initial price be not greater than 18.5 cents per Mcf, upon a further condition with respect to modification of the take-or-pay-for provision of Superior's contract, and upon condition that there be a moratorium upon all price increases until the final determination in Docket No. AR61-2 (the applicable Area Rate Proceeding) or until July 1, 1967, whichever is earlier. Superior states that its motion is made "in lieu of a petition for rehearing under Section 19(a) for the reason that successful judicial review of this order, because of the delay incident to such course, would be of no practical benefit".

The motion for reconsideration presents no new argument or citation of authority beyond what was presented and carefully considered by the Commission in this proceeding and in the area in-line rate proceeding dealing with contracts prior to January 1, 1963 (*Union Texas Petroleum, et al.*, Opinion No. 436), 32 FPC 254. Upon full reconsideration, we believe the order of July 23, 1964, was correct, and should be adhered to, for the reasons stated in Opinion No. 437.

The Commission finds:

No new facts or principles of law have been presented on this motion for reconsideration which either were not fully considered by the Commission prior to its order herein or, having been now considered, warrant further hearing, modification, reconsideration, or revocation of said order.

The Commission orders:

The motion for reconsideration filed herein by The Superior Oil Company be and the same hereby is denied.

OPINION NO. 436-A

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.

MEMORANDUM OPINION AND ORDER ON REHEARING MODIFYING OPINION NO. 436 AND GRANTING STAY

(Issued October 8, 1964)*

Syllabus

1. Objections not raised by exceptions to examiner's decision may not properly be raised for first time on application for rehearing. P. 953.
2. Use of in-line concept to fix initial prices results from Supreme Court's CATCO admonition to hold line against increases in initial gas prices – – it is a method Commission is bound to apply under present law. P. 953.
3. While it remains Commission policy to accord lesser weight to temporary than permanent certificates in establishment of in-line price, such policy is immaterial here since both temporary and permanent certificates indicate no change in in-line prices subsequent to 1959. P. 954.
4. In-lineness determined here on basis of prices under which substantial amount of gas moving in interstate commerce was sold within area during period in question. P. 954.
5. It has not been established that successive guideline prices in area cause any change in in-line prices. P. 954.
6. Pending resolution of conflict between U.S. Circuit Courts of Appeal, Commission must decline to accept one unfavorable decision as binding upon it. P. 955.
7. Rather than attempt to set different ceilings for different certificates, administrative efficiency and equity dictate the fixing of a common ceiling for all producers. P. 956.
8. Moratorium on excessive price increases is necessary part of holding line until just and reasonable rate can be determined. P. 956.
9. Upon rehearing, Commission *modifies* Opinion No. 436; *grants* stay in part and in all other respects *confirms* said opinion.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and David S. Black.

BLACK, *Commissioner:*

Applications for rehearing were filed to our Opinion No. 436 and Order issued July 23, 1964, 32 FPC 254, in the above-entitled proceeding by several producers

*Rehearing denied by order issued November 23, 1964, 32 FPC 1358. Set aside on *Catco* settlement issue, *sub nom. Continental Oil Co.* v. *F.P.C.*, 373 F. 2d 96 (CA10–1967; #8117). Remanded on 1.5¢ tax reimbursement issue; set aside on refund power, otherwise affirmed, *sub nom. Pan American Petroleum Corp.* v. *F.P.C.*, 376 F. 2d 161 (CA10–1967; #7912).

and by Transcontinental Gas Pipe Line Corporation (Transco). Certain producers also filed motions for stay of the various paragraphs of the order for periods varying from 60 days to the conclusion of judicial review. On August 27, 1964, 32 FPC 666, we granted rehearing in order to afford further time for consideration of the issues.

In our opinion and order we determined the initial prices required by the public convenience and necessity for the sales listed in Appendices B, C, and D to that order. Except in special circumstances applicable to individual cases, said initial price was determined to be 18.5 cents per Mcf for gas produced in the Federal domain offshore Louisiana and 20 cents per Mcf for gas subject to Louisiana severance tax, including all reimbursements and charges. The certificates were further conditioned to provide for a moratorium on the filing of price increases above 23.55 cents per Mcf for a stated period, and for possible revision of the take-or-pay requirement in each contract on the basis of the final order in the proceeding in Docket No. R–199. In those dockets where the temporary authorization contained a refund condition, the certificate order requires the immediate refund of excessive amounts previously collected. The question whether refunds should be required in those cases in which no refund condition was included in the temporary authorization was deferred pending the submission of additional briefs, statements of fact, and statements of evidence. As there indicated, no determination has yet been made as to whether refunds will be required in such cases or as to the procedure to be followed in alleging and making proof of the equities with respect to any such refunds.

Particular determinations were also made with respect to individual dockets presenting special circumstances. Insofar as these require consideration here, they will be dealt with later in this opinion.

Several of the producers now object to the use of the in-line price concept to determine initial prices. They also urge that the in-line prices were determined by improper standards and that no standard was established in advance of our determination to enable them to make an adequate presentation to the Commission. Several producers also object to including in their certificates a condition for a moratorium against price increases and a condition for the future alteration of the take-or-pay provisions of their contracts. Objection is also made to the Commission's determination that it has power to order refunds in dockets where the temporary authorization contained no refund condition. Some of these objections now presented were not raised by exceptions to the presiding examiner's decision and may not properly be raised for the first time on an application for rehearing. The conditions with respect to a moratorium on price increases and to the prospective alteration of the take-or-pay provisions of filed contracts are in accordance with the established policy of this Commission. The use of the in-line price concept to fix initial prices is a result of the Supreme Court's admonition to this Commission in the *Catco* case to hold the line against increases in the initial price of gas. It is the method of fixing initial prices which we believe are bound to apply in the present state of the law.

The method used by the Commission in establishing the in-line prices applicable in this proceeding has apparently not been understood by a number of producers. Rehearing has been requested on the ground that the Commission has improperly used in-line prices established in prior cases, thus depriving some producers of a determination based upon the evidence in this proceeding. This, however, was not the basis of our determination. We have determined the in-line price for years prior to 1960 upon the evidence in this case. The fact that the evidence

was substantially the same as that submitted in prior cases and that we reached the same result does not mean that we failed to consider the evidence. The previous cases were cited as precedents for the action here taken, as any decision of this Commission may be cited as a precedent applicable in similar circumstances.

Some producers attack our determination on the ground that insufficient weight was given to the prices under temporary certificates. The weighted averages of temporary certificates in the periods subsequent to 1959 do not indicate that there has been any substantial change for those periods as compared with a similar period prior to that time. While it remains a policy of the Commission that temporary certificates are to be accorded lesser weight than permanent certificates in the establishment of an in-line price, this policy is immaterial in our determination in this case. Both temporary and permanent certificates indicate no change in the in-line prices subsequent to 1959.

Some producers protest that, in compiling the weighted averages set forth in the opinion, certain prices were excluded. Such was not the case. All prices which were in the record were included in compiling the weighted averages for permanent and temporary certificates, respectively, as may be verified by mathematical computation.

There has been no failure to provide standards to enable the producers to present proof with respect to the in-line prices. As we have done consistently, we have determined the in-line prices on the basis of prices under which a substantial amount of gas moving in interstate commerce was sold within the area during the period in question.

Objection has been made to the division of the period after 1959 into three segments comprising, respectively, the time prior to the issuance of the first guideline price applicable in southern Louisiana, the period falling between the issuance of the first guideline price and the second guideline price issued with respect to that area, and the period subsequent to the issuance of the second guideline price. Selection of these periods is characterized as arbitrary. On the other hand, the Commission's determination of the in-line price is attacked on the ground that insufficient weight was given to these guideline prices. The selection of these periods was not made arbitrarily, but because the issuance of each of these guidelines was an event which conceivably could have had an effect on the prices in the area. Accordingly, we examined the prices before and after the issuance of each guideline to determine whether its effect might have caused a change in the in-line price in the area. We determined that, while the guideline prices have had the effect of eliminating some of the excesses, it has not been established that the guidelines caused any change in the in-line prices.

If, however, we accept the contention that these periods should not be used for the compilation of weighted averages in the determination of in-line prices, but, rather, that weighted averages should be compiled (and the in-line prices determined) on the basis of the calendar years 1960, 1961, and 1962, it would give no aid to the producers' argument. In fact, the weighted averages would be somewhat lower for the calendar years 1961 and 1962 than for the most nearly corresponding periods actually used—October 26, 1960, to October 31, 1961, and November 1, 1961, to the end of 1962.

In requesting rehearing, the producers have reiterated their arguments that error was committed in excluding certain evidence. We have fully considered this matter in reaching our initial decision. We have again considered the

arguments advanced by the producers in this respect, including their citation of authority not available at the time of our original decision. After such consideration, we adhere to our previous views.

Producers have cited, in support of their exceptions, *Callery Properties, Inc.* v. *F.P.C.* (CA5, August 14, 1964). In that case, the Circuit Court of Appeals for the Fifth Circuit held invalid a moratorium on price increases as a condition to the issuance of a permanent certificate, and ruled that refunds of amounts collected could not be ordered except to the extent these amounts are shown to be in excess of a just and reasonable price. The court further held that the Commission was in error in excluding economic and cost evidence similar to that rejected in this proceeding. We are now seeking review of this decision which is in conflict with the views of other circuit courts as well as this Commission by certiorari to the United States Supreme Court. (See *Public Service Commission of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC-1964), cert. den. 377 U.S. 963.) Pending resolution of the conflict between circuits we must decline to accept this decision as binding upon us.

There remain for consideration a number of matters raised in individual dockets. Further examination of the terms of settlement applicable in the case of Docket Nos. CI62–135, CI62–137, CI62–146, and CI62–147 convinces us that the conditions set forth in paragraphs (D) and (E) of the presiding examiner's proposed order should not be applied in said cases, as other conditions are specified in the settlement. This order will so provide.

J. C. Trahan, Drilling Contractor, Inc., and Shoreline Exploration, Inc., are concerned with the wording of the previous order, which would require them to refund the difference between their rates as presently certificated and the applicable rates to be determined in the area rate proceeding, AR61–2, or other applicable proceeding. They urge that a condition that the rate to be determined in the later proceedings shall be binding, whether or not they are parties to any such proceeding, is beyond the Commission's power and denies due process of law. They do not question the purpose of the prior order to make them responsible for refunds to the level of an area rate fixed in Docket No. AR61–2. We think they should be made parties to any proceeding affecting their rights, and will so direct should the occasion arise. The prior order will be amended to eliminate the provision that they will be bound whether or not they are parties to the applicable proceeding. However, the order should retain the reference to an applicable proceeding other than AR61–2, in the event procedural changes make this necessary.

Transcontinental Gas Pipe Line Corporation (Transco) urges that the original opinion was incorrect in concluding that no refund should be ordered at this time of any part of the amounts paid by Transco pursuant to the take-or-pay clause of its contract in Docket No. CI61–182. Transco contends that its contract indicates an intent that payment should be made at the price effective at the time of physical delivery rather than the price in effect at the time of payment pursuant to the take-or-pay clause. If so, it would follow that refund of the overpayment should be ordered now. Transco concedes that there is no provision for a refund of any portion of the take-or-pay payment in the event of a later reduction in price. It argues that the provision requiring the buyer to pay the difference in the event of a price increase between the time of payment (under the take-or-pay clause) and the time of taking delivery of the gas indicates an intent to have the price fixed as of the time of delivery.

We have examined the provisions of Transco's contract. We think that in substance they cannot be differentiated from the contract provisions in *Amerada*

Petroleum Corporation, Docket No. G–18346, and *Phillips Petroleum Company*, Docket No. G–18375. Our declaratory orders issued April 22, 1964, 31 FPC 1018, 1021, respectively, in the cited dockets are contrary to Transco's contention here. In the absence of an express provision in the contract that there is to be a refund or credit if the effective price of the gas declines between the date of payment and the date of delivery, we think no refund should be ordered at this time.

Placid Oil Company, Hassie Hunt Trust, H. L. Hunt, and Hunt Oil Company have urged that the 23.55 cents per Mcf is not the proper moratorium level. They point out that sales have taken place in the area at 23.675 and 24.05 cents per Mcf, and that any triggering must already have occurred. This argument assumes that the sole justification of the moratorium level must be that a price increase above that level will cause a triggering of favored-nation contract clauses authorizing the filing of price increases in other contracts in the southern Louisiana area whenever sales in that area are made above a specified figure. This is much too simple a portrait of the true situation. Not only are many of the favored-nation clauses limited to being triggered by price increases in areas less broad than in the entire southern Louisiana pricing area, but many of the contracts in that area provide for renegotiation on the basis of sales made to three different pipelines within specified geographical limits. It would be practically impossible to determine in advance if, when, and to what extent price escalation clauses may be activated in an area of a given price increase. A variety of indefinite price escalation clauses are found in the contracts in this area; they are both ambiguous and complex and would require the resolution of complicated factual issues on a contract-by-contract basis. Rather than attempt to set different ceilings for different certificates, both administrative efficiency and equity dictate the fixing of a common ceiling. Here we have fixed a rate which we consider to be the point above which increases would prompt a general escalation of prices in the area, and beyond which no producer may go during the period of the moratorium. We think that pending the outcome of AR61–2 it would be inconsistent with the public convenience and necessity to certificate sales authorizing higher rates.

In brief, we think a moratorium on excessive price increases is a necessary part of holding the line until a just and reasonable rate can be determined; and we think a common ceiling for all producers is more equitable and more practical than an attempt to fix individual ceilings in individual dockets.

Placid Oil Company, Hassie Hunt Trust, H. L. Hunt, and Hunt Oil Company have moved, together with their application for rehearing, to reopen the proceeding for the admission of (a) evidence rejected by the presiding examiner and (b) new evidence available after the record was closed. This evidence is specified only by reference. At page 18 of the application for rehearing, it is summarized as follows:

> Applicants' evidence shows the relative costs of production, the reason why the proposed price was required and in addition all other elements of the public interest such as supply, demand, economic, geological, engineering, exploration, and cost evidence, as well as historical price data.

Insofar as historical price evidence is relevant, it has been admitted in this proceeding; applicants have specified no new historical price evidence which we deem relevant. The other evidence incorporated by reference in applicants' motion is of the same type we have found to be inadmissible in an in-line price proceeding. The motion, accordingly, will be denied.

The determination as to whether refunds should be ordered in the dockets listed in Appendix B of our original order will require the presentation of evidence and arguments. We do not think it necessary or desirable that the issuance of permanent certificates should be delayed pending the determination of this question now that the other issues of general application in this proceeding have been decided. Accordingly, our prior order will be modified to provide that permanent certificates shall be issued in these cases, subject, however, to a condition that an agreement and undertaking be filed by each producer affected to pay the amount of any such refunds, subsequently established by order of this Commission, within 30 days after the time such order becomes final and no longer subject to judicial review. As the present order is the final order of the Commission which determines the future rates which may be collected by the producers and also finally determines other questions which certain producers have indicated will be brought to review in the courts, the way will be cleared for prompt judicial review of all matters herein finally decided.

A number of applications for rehearing include motions for stay of the ordering paragraphs of the original decision, either for a specified length of time or pending the outcome of judicial review. Stay of the provisions requiring refunds to be made will be granted, subject to the filing of agreements and undertakings by the producers in the individual dockets that payment of any refunds ordered will be made 30 days after our order becomes final and not subject to judicial review. Stay will also be granted of the filing requirements of paragraph (C) of the presiding examiner's proposed order, as amended by paragraph (A) of our original order, subject to the filing of agreements and undertakings by the producer in the individual dockets to refund with interest all amounts collected subsequent to the date of the original order in excess of the amounts determined by said order to be proper, subject to any modification thereof as a result of court review. The filing of briefs, statements of fact, and statements of evidence pursuant to the provisions of paragraph (C) of our original order will not be required until further order of this Commission. Stay of paragraphs (D) and (E) of the presiding examiner's proposed order providing for a moratorium condition on price increases and a condition for revision of the take-or-pay clause of the producers' contracts will be denied in accordance with our determination in *Amerada Petroleum Corporation*, Opinion No. 422–A, 31 FPC 1315. Stay of the other provisions of our original order is unnecessary.

We have carefully considered the other matters raised by the applications for rehearing and find that all matters there raised were considered by us prior to our original decision and order in this matter, and, after full reconsideration, we adhere to our original decision and order, except to the extent herein modified.

The Commission finds:

(1) The assignments of error and grounds for rehearing and reopening set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 436, or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order, except as specified below.

(2) Good cause exists for granting in part the motions for amendment to the order herein issued on July 23, 1964, so as to stay the filings required by paragraph (A) of said order (amending paragraph (C) to the presiding examiner's proposed order), and so as to stay any action required by paragraph (B) of said order (amending paragraph (F) of the presiding examiner's proposed order) pending judicial review of said Opinion No. 436, as to all producers who file within 30 days of the effective date of this order an agreement and undertaking to be

responsible for such refunds as may be ordered by valid order of this Commission no longer subject to judicial review.

(3) The condition set forth in paragraphs (C) and (E) of the accompanying order is required by the public convenience and necessity.

The Commission orders:

(A) The completion of the acts and compliance with the requirements set forth in ordering paragraphs (A) and (B) of the order accompanying Opinion No. 436 are hereby stayed for a period of 30 days after conclusion of judicial review of said Opinion or until said order otherwise becomes final, provided, however, that with respect to all amounts herein allowed to be charged in excess of the rates prescribed in said order, each applicant shall execute and file within 30 days an agreement and undertaking to refund all such excess amounts received after July 23, 1964 (except as such amounts may be revised by judicial review or later order of the Commission), with interest at 7 percent per annum from the date of receipt to the date of payment, within 30 days of the time said order, or other applicable order of the Commission in this proceeding, becomes final and not subject to judicial review.

(B) The motions for stay in all other particulars are denied.

(C) The provisions of paragraph (C) of the order accompanying Opinion No. 436 are hereby amended to read as follows:

(C) The decision whether refunds should be ordered as a condition to the permanent certificates listed in Appendix B is deferred for subsequent determination in accordance with procedures to be established by future order of the Commission. Each certificate listed in Appendix B, if issued and accepted prior to the decision with respect to such refunds, shall contain a condition that the applicant, at the time of acceptance of the certificate, shall execute and file an agreement and undertaking to make all refunds determined to be due by later order of this Commission in this proceeding or such other proceeding as the Commission may conduct for the purpose of determining this question, not more than 30 days after said order has become final and no longer subject to judicial review, together with such interest as the Commission may direct by such final order.

(D) The certificates to be issued in Docket Nos. CI62–135, CI62–137, CI62–146, and CI62–147 shall not be subject to the conditions or requirements of paragraphs (D) and (E) of the presiding examiner's proposed order.

(E) The provisions of paragraph (D) of the order accompanying Opinion No. 436 are hereby amended to read as follows:

The certificate herein issued to J. C. Trahan, Drilling Contractor, Inc. (Operator), *et al.*, in Docket No. CI61–452 and to Shoreline Exploration, Inc., in Docket Nos. CI62–73 and CI62–102 shall contain the following condition: "The producer, although authorized to collect the initial rate herein provided, shall remain liable for, and by acceptance of this certificate agrees to remain liable for, refund (with interest) of the difference between any amounts collected by it from a purchaser (with respect to natural gas produced from the acreage covered by this certificate, whether before or after the issuance of this certificate) and the rate or rates ultimately determined to be applicable in the area by final order issued in the Area Rate Proceeding, Docket No. AR61–2, *et al.*, or such applicable proceeding as the Commission may order."

(F) In all other respects Opinion No. 436 and the accompanying order are confirmed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NO. 2346

ORDER DENYING APPLICATION FOR REHEARING

(Issued October 8, 1964)

On September 9, 1964, the Wisconsin Power & Light Company (Applicant) filed application under Section 313(a) of the Federal Power Act for rehearing on the Commission's license order issued August 10, 1964, 32 FPC 575, with respect to Applicant's constructed minor hydroelectric Project No. 2346 with an installed capacity of 430 horsepower, known as the Monterey Plant located on Rock River, in the city of Janesville, Rock County, Wisconsin. Applicant alleges two errors on the part of the Commission in issuing this order.

The first error alleged by Applicant is that Paragraph (B)(1) of the order issuing license[1] fails to sufficiently describe the limits of the project boundaries because the project map, Exhibit K, submitted in accordance with Section 131.6 of the Regulations contained only the general location of the project without specifying the project boundaries. Applicant apparently is concerned because it assumed that the provisions of Section 14 of the Federal Power Act, under which the United States may take over the project works at the end of the license period at a cost defined in that section, applied to this project. It is Applicant's view that the indefiniteness as to project boundaries when considered in the light of Section 14 creates a cloud upon the title to lands adjacent to, but not a part of the project.

As a practical matter, Applicant cannot be aggrieved by any possible vagueness in the definition of the project boundaries because the Commission's order issuing a license for the project makes clear in Finding No. 7 and ordering paragraph (D) that the Commission has waived the provisions of Section 14, except insofar as the power of condemnation is reserved, as authorized in Section 10(i) of the Power Act with respect to projects of not more than 2,000 horsepower installed capacity. Consequently, the project may be taken over by the United States only with the consent of the licensee or upon condemnation; and in either event the lands and project works to be taken over would be subject to definition at that time and would not depend upon any present definition of the project boundaries. Due to the waiver of Section 14 and other sections of the Act, the Commission followed its usual procedure in this case by neither approving nor disapproving the Applicant's map, Exhibit K. However, the Applicant may, if it wishes to define the location of the project works and the project boundary in more detail, file a revised Exhibit K with the Commission containing as much detail as it deems necessary and desirable.

Applicant alleges that the second error arises from the failure of the application for license to describe in detail the ownership of the water power made available by the dam, which is part of the project works, with the result that Applicant believes there has been a failure of hearing upon the rights of other proprietors having an interest in the water power as determined by court action in 1881. Applicant states that rehearing is sought for the purpose of giving notice to those owners and having their rights with respect to the license determined.

---

[1] (B) Project No. 2346 consists of:

(1) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

The Applicant's failure to detail the water power rights of third parties in its application for license did not deprive the owners of any water power rights from its project and of any right to notice or hearing. The Commission gave public notice of this application for a minor project license by publication in the *Federal Register* and the notice was mailed to the Public Service Commission of Wisconsin, the Board of Supervisors of Rock County and the Mayor of Janesville. None of the owners of any water power rights has raised any question about those rights. In any event, Sections 21 and 27 of the Federal Power Act protect against interference with any vested water rights by the licensee without the payment of just compensation.

The Commission finds:

The assignments of error or grounds for rehearing set forth in the application for rehearing filed by the Applicant on September 9, 1964, on the Commission's order issued on August 10, 1964, present no facts or principles of law which were not considered by the Commission when it issued its aforesaid order, or which having now been considered warrant change or modification of the said order.

The Commission orders:

The Wisconsin Power & Light Company's application filed on September 9, 1964, for rehearing of the Commission's order issued August 10, 1964, in Project No. 2346 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BALTIC OPERATING COMPANY AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-311

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued October 9, 1964)

On June 26, 1964, Baltic Operating Company (Baltic) and Cities Service Gas Company (Cities Service) filed in Docket No. CP64-311 a joint application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing Cities Service to acquire and operate certain facilities now owned and operated by Baltic; to construct, operate and reclaim certain metering and regulating facilities and to continue the service presently rendered by Baltic by means of the facilities proposed to be acquired, and, further, for authority permitting Baltic to abandon the facilities to be acquired by Cities Service and the service rendered by means thereof all as more fully set forth in the joint application.

Specifically, Cities Service proposes to acquire and operate 20,445 feet of Baltic's 3-inch pipeline located in Alfalfa County, Oklahoma, and Barber County, Kansas, extending from the present purchase connection with Cities Service's Pampa 20-inch line to the present point of sale and connection with United Gas Service Company's 3-inch line, south of Kiowa, Kansas, and 4,082 feet of 6-inch pipeline and 1,420 feet of 2-inch pipeline located in Ottawa County, Oklahoma, and Cherokee County, Kansas, extending from the present point of interconnection with Cities Service's Picher 6-inch line to the present point of interconnection with the 6-inch line of Baxter Springs Gas Company, east of Treece, Kansas.

Baltic presently utilizes the above-described lines to render service to the two distributing companies, United Gas Service Company and Baxter Springs Gas Company. Cities Service proposes to continue service to said companies.

Additionally, Cities Service proposes to construct and operate new town border metering and regulating stations for Kiowa and Treece and to reclaim the existing stations.

Cities Service will pay Baltic $621.26 for the subject facilities. Said payment is the original cost less accumulated depreciation. The cost of the town border stations for Kiowa and Treece is $6,540 and $2,590, respectively.

Applicants state that the proposed project will result in lower rates to the two distribution companies presently served by Baltic since said companies will be purchasing directly from Cities Service at Cities Service's rates.

The application indicates that upon completion of the proposed acquisition Baltic will be liquidated.

After due notice no petition to intervene, notice of intervention or protest to the granting of the joint application has been filed.

At a hearing held on October 1, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the joint application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Baltic Operating Company, an Oklahoma corporation, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–261 (3 FPC 864).

(2) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(3) The facilities hereinbefore described, as more fully described in the joint application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction, acquisition and operation thereof and the transportation and sale of natural gas by Cities Service are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The proposed construction, acquisition and operation of the subject facilities and the proposed transportation and sale of natural gas by Cities Service are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Cities Service is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Cities Service's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(7) The facilities and service to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and the abandonment of such

facilities and service is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(8) Such abandonment by Baltic, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct, acquire, operate and reclaim the subject facilities and to sell and deliver natural gas, as hereinbefore described, all as more fully described in the joint application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Cities Service's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized to be acquired, constructed and operated shall be acquired, completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Baltic of the facilities and service hereinbefore described, all as more fully described in the joint application in this proceeding, be and the same are hereby granted.

(E) Baltic shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP64-310

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 9, 1964)

Central Illinois Public Service Company (Applicant) filed in Docket No. CP64-310 on June 24, 1964, an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle Eastern) to establish physical connection of its transmission facilities with the proposed facilities of, and to sell natural gas to Applicant for distribution and resale in Milton, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate a distribution system in Milton, Illinois, as well as 2¼ miles of 2-inch gas transmission line extending from a proposed metering and regulating station of Panhandle Eastern to Applicant's regulator station in the town of Milton.

Approvals of this proposal were issued by Milton and by the Illinois Commerce Commission on March 13, 1964, and June 2, 1964, respectively. Annual and peak day requirements of Applicant for the initial three year period are estimated to be:

Volumes in Mcf

	1st year	2d year	3d year
Peak day	148	211	225
Annual	15,800	22,385	23,680

The total estimated cost of the transmission and distribution facilities for the project is $59,816, which will be defrayed from Applicant's funds.

On July 30, 1964, Panhandle Eastern filed an answer to the application stating it does not object to the issuance of an order providing for the installation of a required tap on its line and for the sale of up to 225 Mcf of natural gas daily provided Applicant proceeds expeditiously with the project and executes an appropriate gas sales contract designating Milton as an additional delivery point with a volume of 225 Mcf per day and a delivery pressure of 300 psig.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on September 11, 1964 (29 F.R. 12856). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, Central Illinois Public Service Company, an Illinois corporation having its principal place of business in Quincy, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Panhandle Eastern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Panhandle Eastern in accordance with the Commission's Regulations, up to 225 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Panhandle Eastern serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Panhandle Eastern, (b) require Panhandle Eastern to enlarge its transportation facilities, or (c) impair Panhandle Eastern's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Panhandle Eastern for distribution in Milton, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Central Illinois Public Service Company as herein described, and to sell and deliver up to 225 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Panhandle Eastern in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Panhandle Eastern's presently filed appropriate rate schedule.

(B) Panhandle Eastern shall report to the Commission, in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within 1 year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP65-8; SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. CI61-18, CI64-1221; BELCO PETROLEUM CORPORATION, DOCKET NO. G-16503

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AMENDING CERTIFICATE AUTHORIZATIONS AND ACCEPTING CERTAIN RELATED FPC GAS RATE FILINGS

(Issued October 9, 1964)

On July 7, 1964, Mountain Fuel Supply Company (Mountain Fuel) filed in Docket No. CP65-8 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon by assignment to Socony Mobil Oil Company, Inc. (Socony), Mountain Fuel's interest in a natural gas lease in the Hogsback Unit, Sublette County, Wyoming, in which Socony is the operator, all as more fully set forth in the application. Notice of Mountain Fuel's application was published in the Federal Register on September 11, 1964 (29 F.R. 12857).

Socony filed in Docket No. CI64-1221 its application for certificate authorization to sell the natural gas produced from the interest acquired by the aforementioned assignment from Mountain Fuel Supply Company, together with gas produced from an interest acquired from Belco Petroleum Corporation, to said Mountain Fuel Supply Company pursuant to a rate filing designated as Socony Mobil Oil Company, Inc. FPC Gas Rate Schedule No. 352, as supplemented. Notice of Socony's application was published in the Federal Register on May 7, 1964 (29 F.R. 6031).

Socony also filed in Docket No. CI61-18 an application to delete a part of the authorization outstanding in that docket to remove therefrom certain acreage in Sweetwater County, Wyoming, likewise assigned to Mountain Fuel Supply Company. Notice of this partial abandonment application was published in the Federal Register on June 23, 1964 (29 F.R. 7956).

The above applications are the result of an exchange of properties between Mountain Fuel and Socony for the purpose of eliminating the small interest of Mountain Fuel in the Hogsback Unit in which Socony is the operator, and eliminating the small interest of Socony in the Pioneer Unit in which Mountain Fuel is the operator. No cash or payment arrangement is involved in the transaction.

No petition to intervene, notice of intervention or protest to the granting of any of the three subject applications has been timely filed.

At a hearing held on October 8, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

(1) Applicant, Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas company"

The Commission finds:

within the meaning of the Natural Gas Act as heretofore found by the Commission in its determination of October 15, 1940, in Docket No. G–154 (2 FPC 288, 292).

(2) Applicant, Socony Mobil Oil Company, Inc., a New York corporation having its principal place of business in New York, New York, is engaged in the sale of natural gas in interstate commerce for ultimate public consumption, subject to the jurisdiction of the Commission, and is therefore a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(3) The natural gas interest proposed to be abandoned by Mountain Fuel, as hereinbefore described and as more fully described in the application in Docket No. CP65–8, is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act and such abandonment should be permitted and approved as hereinafter ordered.

(4) The sale of natural gas by Socony, as hereinbefore described and as more fully described in the application in Docket No. CI64–1221, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Socony, together with the continued operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The proposed sale by Socony, together with the continued operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant, Socony, is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate authorizations heretofore granted to Belco Petroleum Corporation in Docket No. G–16503 and to Socony in Docket No. CI61–18 be amended as hereinafter ordered.

(8) Certain related FPC gas rate filings should be accepted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Mountain Fuel Supply Company as hereinbefore described and as more fully described in the application in Docket No. CP65–8 are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale of natural gas by Socony Mobil Oil Company, Inc., of natural gas in interstate commerce for resale, together with the continued operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as hereinbefore described and as more fully described in the application in Docket No. CI64–1221.

(C) The certificate granted by paragraph (B) above is not transferable and shall be effective only so long as Socony continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(D) The grant of the certificate issued by paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is

without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Socony. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the aforesaid contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of the sale of natural gas subject to said certificate.

(E) The certificate authorization heretofore granted to Belco Petroleum Corporation in Docket No. G–16503 is hereby amended by deleting therefrom the authorization to sell natural gas from the acreage acquired by Socony from Belco by assignment dated August 13, 1963.

(F) The certificate authorization heretofore granted to Socony in Docket No. CI61–18 is hereby amended by deleting therefrom the authorization to sell natural gas from the acreage assigned by Socony to Mountain Fuel on January 1, 1963.

(G) In all other respects, the respective certificate authorizations in Docket Nos. G–16503 and CI61–18 shall remain in full force and effect.

(H) The related rate filings listed below are hereby accepted for filing, subject to all applicable Commission Regulations under the Natural Gas Act on the date on which this order issues:

Docket No.	Rate schedule designation	Description and date of document
CI61–18	Supplement No. 3 to Socony Mobil Oil Company, Inc., FPC Gas Rate Schedule No. 298.	Notice of Cancellation, 6/3/64.
CI64–1221	Socony Mobil Oil Company, Inc., FPC Gas Rate Schedule No. 352.	Contract, 1/20/64.
	Supplement No. 1 to above	Assignment, 8/26/63.
	Supplement No. 2 to above	Assignment, 8/13/63.
	Supplement No. 3 to above	Letter Agreement, 3/12/64.

(I) The grant of the certificate issued by paragraph (B) above is hereby conditioned upon Socony's amending its basic contract of January 20, 1964, by deleting therefrom the indefinite pricing provision which is in conflict with Section 154.93 of the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PAN AMERICAN PETROLEUM CORPORATION, ET AL., DOCKET NO. RI63–481, ET AL.[1]

ORDER DEFERRING ACTION PENDING A STATE COURT DETERMINATION

(Issued October 9, 1964)*

On May 27, 1963, Pan American Petroleum Corporation (Pan Am) tendered for filing various proposed increased rates reflecting contractual reimbursement

[1] Additional proceedings involved in this order are listed in the appendix attached hereto.

*Order issued December 3, 1964, denying rehearing, 32 FPC 1394.

for the full 2.55% tax paid under the April 1, 1963, New Mexico Oil and Gas Emergency School Tax Act.[3] The buyer, El Paso Natural Gas Company (El Paso), has protested such rate filings contending that Pan Am is entitled to additional contractual reimbursement based on 0.55% of the tax paid as a new or increased tax. El Paso asserts that a proper interpretation of the Oil and Gas Emergency School Tax Act as it existed before April 1, 1963, and after April 1, 1963, indicates that an additional or increase in tax of 0.55% and not 2.55% was levied. In an answer filed June 24, 1963, Pan Am asserts that El Paso's interpretation of the tax legislation is incorrect and argues that a proper interpretation supports its filings. By order issued June 26, 1963, in Docket No. RI63–481, as amended by order issued July 31, 1963, Pan Am's rate filings were suspended until June 28, 1963.[3] In the June 26 suspension order it was stated that any hearing with regard to such rate changes would concern itself with the legality of the filings as well as with the justness and reasonableness of the rates.[4]

On April 13, 1964, El Paso was served with a complaint filed by Pan Am in the District Court of Lea County, State of New Mexico.[5] Such complaint requests a declaratory order which would determine and establish the right of Pan Am to contractual reimbursement based on the 2.55% tax paid under the April 1, 1963, Tax Act as a new tax or an increase in tax. The case is presently pending before the District Court of Lea County. El Paso has answered Pan Am's complaint stating, *inter alia*, that the courts of New Mexico do not have jurisdiction over the subject matter, but that if the court has jurisdiction it must declare that the proper reimbursement is based upon a 0.55% tax calculation.

In view of this claim of primary jurisdiction we believe that it is advisable for us to set forth our views on the procedure we intend to follow herein. A principal contention made by El Paso in support of its jurisdictional claim is that since the sales in question are subject to the jurisdiction of this Commission then we have exclusive jurisdiction over questions raised in the Pan Am action. As indicated in our June 26, 1963, suspension order there is a threshold question as to the contractural basis for the filings by Pan Am as well as the broader question regarding the justness and reasonableness of the rates. While we do not doubt that we have the power to resolve this threshold question, as well as the question of the justness and reasonableness of the increased rate, since determination of the threshold question presents a question which turns on an interpretation of state statutes and since a state court of New Mexico has pending before it litigation which should result in the interpretation of such statutes, it is appropriate for us to exercise our discretionary power in this matter by deferring action in Docket No. RI63–481 pending state court action.[6] By deferring action

---

[3] A large number of other increased rate filings purporting to arise under the April 1, 1963, New Mexico Oil & Gas Emergency School Tax, and involving the same problem presented in Docket No. RI63–481, have been made by Pan Am and the other producers. Such increased rates have also been suspended. See the attached appendix for the list of proceedings in which the other filings have been suspended.

[3] Pursuant to the filing of an acceptable agreement and undertaking Pan Am's rates were made effective as of June 28, 1963.

[4] By order issued November 18, 1963, in the Docket No. RI63–481, El Paso was permitted to intervene.

[5] The title of the action is "*Pan American Petroleum Corporation*, a Corporation, Plaintiff, v. *El Paso Natural Gas Company*, a Corporation, Defendant," in the District Court of Lea County, State of New Mexico, No. 22727.

[6] This is not a case where federal law conflicts with or might supersede state law. The threshold contract question presented must be decided under state law. Moreover, it is clear that if the state courts of New Mexico had already finally determined the state law question the Commission would be obligated to follow their view, and that if the state courts subsequent to a Commission determination were to reach a contrary determination then the Commission upon proper application would prospectively revise its determination.

on the question of the legality of the rate filings pending a state court determination we are, of course, in no way implying that the ultimate determination as to the justness and reasonableness of the subject rates is not within the exclusive jurisdiction of this Commission.

We shall also defer action in the proceedings listed in the appendix since they also involve the same issue.[1]

The Commission orders:

Action by this Commission regarding the legality of the proposed increased rate filings suspended in Docket No. RI63-481 and in the proceedings listed in the appendix is hereby deferred pending final determination of the complaint filed by Pan American in the District Court of Lea County, State of New Mexico.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-18

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 9, 1964)

On July 17, 1964, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-18, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a compressor station and 6.6 miles of 16-inch pipeline, all as more fully set forth in the application.

Specifically, Applicant requests authority to construct and operate a 2,200 horsepower compressor station in Morton County, Kansas, and to construct and operate 6.6 miles of 16-inch pipeline connecting the proposed station with Applicant's existing supply lines. The proposed compressor station will enable Applicant to maintain deliverability of the present gas supply into its main line. The Kansas-Hugoton Field has been producing for a number of years and well pressures have been declining. The proposed compressor station is required to offset this decline in field pressure. The new station will permit Applicant to maintain peak day deliverability and to fully utilize yearly allowables of its gas supply from this area, both of which are essential to the maintenance of normal operations.

The estimated total cost of the proposed facilities is $900,000 and will be financed by funds derived from internal sources.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on October 8, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 90 days from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

SOUTHERN NATURAL GAS CO., DOCKET NO. CP65-5

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 9, 1964)

On July 6, 1964, as supplemented on August 5, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP65-5 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities necessary for the sale and delivery of natural gas, on a firm and interruptible basis, to the Oliver Electrical Manufacturing Co. (Oliver) for use by the latter in its plant near Vicksburg, Mississippi, all as more fully set forth in the application, as supplemented, on file with the Commission and open to public inspection.

Specifically, Applicant proposes to tap its Vicksburg branch line, construct and operate 2.4 miles of 4½-inch tap line from said tap to the Oliver plant site and to construct and operate a measuring station at the terminus of said tap line.

Oliver's estimated peak day and annual natural gas requirements are 600 Mcf and 108,700 Mcf, respectively.

Applicant and Oliver have entered into a contract, dated June 17, 1964, providing for the sale of up to 600 Mcf of natural gas per day. Of this volume 40 Mcf will be on a firm basis and the remainder on an interruptible basis. Further, firm and interruptible gas will be sold at rates of 42 cents per Mcf and 35 cents per Mcf, respectively.

The total estimated cost of the proposed facilities is $65,980, which cost will be financed from cash on hand.

Oliver will manufacture electrical transmission line equipment at its Vicksburg plant and natural gas will be utilized for firing galvanizing and forging furnaces, as well as for space heating.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on October 8, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized hereinafter should be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

(7) The certificate issued hereinafter should not entitle Oliver to whom firm deliveries are authorized hereinafter to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 2 months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm resale service to its customers.

(E) This certificate shall not entitle Oliver to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-32

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 9, 1964)

By Commission order issued August 10, 1964, 32 FPC 571, in Docket No. CP64-32 Texas Gas Transmission Corporation (Applicant) was authorized, among other things, to construct and operate facilities necessary for new delivery points for three existing customers, The Ohio Fuel Gas Company, Western Kentucky Natural Gas Company and Indiana Natural Gas Corporation. The original application, filed on July 31, 1963, and the first two amendments thereto were noticed on July 7, 1964. On July 29, 1964, Applicant filed a third amendment which is the subject of this order. Since the third amendment was filed subsequent to the notice of July 7, 1964, it could not be included in said notice and disposed of by the order of August 10. Consequently, said third amendment will be treated herein as an application to amend the order of August 10, 1964, and will be referred to hereinafter as such.

By the subject application, Texas Gas requests authorization to construct and operate a side valve and meter in Lawrence County, Illinois, for delivery of gas to Illinois Gas Company (Illinois Gas) for resale in the Village of Birds and the Community of Pinkstaff, Illinois, and environs, and a side valve and meter in Sullivan County, Indiana, for delivery of gas to Ohio Valley Gas, Inc. (Ohio Valley), for resale in the Community of Hymera, Indiana. The application shows the estimated annual deliveries at the Lawrence County and Sullivan County points to be 26,000 Mcf and 20,500 Mcf, respectively. Applicant states that no increase in the contract demands of either Illinois Gas or Ohio Valley is proposed for the subject additional service.

The total estimated cost of the proposed facilities is $7,750, which cost will be financed from cash on hand.

Due notice of the application and opportunity for hearing thereon has been given by publication in the Federal Register on September 3, 1964, (29 F.R. 12565). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued August 10, 1964, in Docket No. CP64–32 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 10, 1964, in Docket No. CP64–32 be and the same is hereby amended by authorizing Applicant to construct and operate the proposed facilities to establish new delivery points for two existing customers, Illinois Gas and Ohio Valley, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CONCORD ELECTRIC COMPANY, PROJECT NO. 1903

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST; ACCRUED DEPRECIATION; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 12, 1964)

Concord Electric Company, Licensee for Project No. 1903,[1] filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from January 1, 1960 through December 31, 1961, project additions and retirements resulting in (1) a $9,411.26 net increase in project cost over the previously determined amount of actual legitimate original cost of the project, $939,735.28 as of December 31, 1959,[2] and (2) a total claimed actual legitimate original cost of the project as of December 31, 1961 of $949,146.54. The claimed net increase of $9,411.26 results from claimed and recorded project gross additions and gross retirements of $9,791.62 and $380.36, respectively, as more specifically shown in the attached Schedule I.

Licensee also from time to time recorded upon its books of account amounts in its reserve for accrued depreciation applicable to in-service project properties resulting in an accumulated provision for depreciation applicable to the project of $351,173.01 as of December 31, 1961, as more specifically shown in the attached Schedule III.

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the above claimed and recorded project cost changes for the period from January 1, 1960, to December 31, 1961, inclusive, and the recorded amounts of accrued depreciation applicable to project properties as of December 31, 1961.

---

[1] The project is located on the Merrimack River in Concord, New Hampshire. The license, authorizing the operation and maintenance of the constructed project was issued pursuant to Section 4(e) of the Federal Power Act, effective for a period beginning January 1, 1938, and terminating June 30, 1970.

[2] See Commission order issued June 26, 1961 (25 FPC 1211).

Following that examination, an agreement, subject to Commission approval, was reached between the staff and representatives of Licensee with respect to certain proposed adjustments consisting of: (1) a decrease in claimed and recorded project cost changes in the net amount of $3,363.35 for the period from January 1, 1960, through December 31, 1961; (2) an increase in recorded project depreciation reserve as of December 31, 1961, in the net amount of $404,565.93; and (3) the accounting disposition of the foregoing amounts.

The proposed accounting disposition of all amounts involved in the proposed adjustments are shown in the attached Schedules II and III.

Based upon the proposed adjustments, the staff recommends and Licensee concurs, that the Commission determine: (1) the net increase or change in project cost for the period from January 1, 1960, through December 31, 1961, to be $6,047.91, comprised of gross additions of $6,428.27 less gross retirements of $380.36; (2) the actual legitimate original cost of the project as of December 31, 1961, to be $945,783.19, classified by primary plant accounts as shown in the attached Schedule I; and (3) the reserve for accrued depreciation of the project as of December 31, 1961, to be $755,738.94, classified by functional groups as shown in the attached Schedule III.

By letter dated January 2, 1964, Licensee confirmed its agreement with respect to the proposed adjustments, accounting dispositions, and resulting project costs and project depreciation reserve.

The New Hampshire Public Utilities Commission was advised by letter of this Commission dated March 17, 1964, of the proposed adjustments, including the accounting dispositions, the resulting project costs, and the resulting project depreciation reserve, all as recommended by this Commission's staff and agreed to by Licensee as set forth above. By letter dated March 21, 1964, that Commission indicated no objection to the foregoing.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, including the accounting dispositions, the resulting project costs, and the resulting project depreciation reserve, and its letter dated January 2, 1964, and the New Hampshire Public Utilities Commission, by its letter dated March 21, 1964, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 1903 for the period from January 1, 1960, through December 31, 1961, is $6,047.91, comprised of gross additions of $6,428.27 less gross retirements of $380.36, and the resulting actual legitimate original cost of the project as of December 31, 1961, is $945,783.19, classified by primary plant accounts as shown in the attached Schedule I.

(4) The reserve for accrued depreciation applicable to in-service project properties of Project No. 1903 is $755,738.94 as of December 31, 1961, classified by functional groups as shown in the attached Schedule III.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall (a) establish and maintain control and subsidiary project plant accounts for Project No. 1903 showing the debit amount of $6,047.91 as the net increase or change in the project cost for the period from January 1, 1960, through December 31, 1961, and the total debit balance of $945,783.19 as the actual legitimate original cost of the project as of December 31, 1961, all as more specifically shown in the attached Schedule I, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, effective January 1, 1961, and (b) establish and maintain a reserve for accrued depreciation applicable to in-service project properties of Project No. 1903 showing the total credit balance of $755,738.94 as of December 31, 1961, classified by functional groups as shown in the attached Schedule III.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission three certified copies of its adjusting journal entries showing compliance therewith.

SCHEDULE I

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-16

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 12, 1964)

On July 14, 1964, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65-16 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing

the construction and operation of approximately 350 feet of 8-inch lateral, a side tap and metering facilities on Applicant's Amarillo line at the outlet of Applicant's Beatrice Compressor Station, Gage County, Nebraska, and the transportation of natural gas in interstate commerce to the proposed ammonia plant of Phillips Petroleum Company (Phillips) for fuel and use as raw material in said plant, all as more fully set forth in the application.

Applicant proposes to sell and deliver to Phillips for use in its plant for fuel and use as raw material the following estimated volumes of natural gas (Mcf 14.65 psia):

Annual volumes

	1964	1965	1966	1967
Construction gas	6,200	37,800		
Firm gas		59,700	109,500	109,500
Off-peak gas		4,248,000	5,368,000	5,457,000
Total sales	6,200	4,345,500	5,477,500	5,566,500

Peak day volumes

	1964-65	1965-66	1966-67	1967-68
Construction or firm gas	300	300	300	300

The contract between Applicant and Phillips provides for an interim sale of volumes of natural gas up to 300 Mcf daily during the construction and testing period, scheduled to end June 15, 1965. Upon commencement of regular operations Phillips will purchase 300 Mcf of firm gas daily and up to 26,000 Mcf of off-peak gas daily during the off-peak season from April 1 to November 30 each year.

The cost of the proposed facilities is estimated to be $18,600, which will be defrayed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 8, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 28, 1947, in Docket No. G-771 (6 FPC 353).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

(D) The certificate issued hereby shall not entitle the industrial customer (Phillips) to whom firm deliveries are authorized (not to exceed 300 Mcf daily) herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) The facilities authorized by the certificate issued hereby shall not be utilized to transport to Phillips volumes of natural gas in excess of 300 Mcf daily on a firm basis and more than 26,000 Mcf daily on an interruptible and off-peak basis from April 1 to November 30 of each year.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 1927

ORDER DETERMINING NET CHANGES IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 12, 1964)

Pacific Power & Light Company, Licensee for Project No. 1927,[1] and its predecessor, California Oregon Power Company, from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from January 1, 1958, through December 31, 1962, a net increase in the actual legitimate original cost of the

---

[1] The project is located on the North Umpqua River in Douglas County, Oregon, affecting lands of the United States within Umpqua National Forest. It may be described as the North Umpqua Project. The license authorizing the construction, operation and maintenance of the project was issued pursuant to Section 4(e) of the Federal Power Act, for a 50-year period, effective as of January 30, 1947, to the California Oregon Power Company. By Commission Order issued June 16, 1961, the transfer of the license, as amended, to Pacific Power & Light Company was approved.

project of $904,209.02, resulting in a claimed and recorded actual legitimate original cost of the project as of December 31, 1962, of $58,792,184.67.[2]

The Commission's staff conducted a field examination of the licensee's books and records for the purpose of determining the accuracy of licensee's claimed and recorded project cost changes and resulting project cost as of December 31, 1962. As a result of this examination, staff proposed, subject to Commission approval, a reduction of $20,474.87 and a reclassification within project plant accounts of $3,885.75 in the claimed and recorded project costs for the period from January 1, 1958, through December 31, 1962, all as shown more specifically in the attached Schedules I and II.

The proposed accounting dispositions of the amounts involved in the proposed adjustments are shown in the attached Schedule II.

By letter dated January 27, 1964, Licensee confirmed its agreement with the proposed staff adjustments and resulting project costs, as set forth above.

The Public Utility Commissioner of Oregon was advised by letter of the Regional Office dated January 31, 1964, as to the proposed staff adjustments and resulting project costs, and indicated no objection thereto in his reply dated February 13, 1964.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments including the accounting disposition and resulting project costs, and the Oregon Public Utility Commissioner by his concurrence, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments, including the reclassifications and accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of the project for the period from January 1, 1958, through December 31, 1962, is $883,734.15, and the resulting legitimate original cost of Project No. 1927 as of December 31, 1962, is $58,771,709.80 classified by plants and primary plant accounts as shown in the attached Schedule I.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and subsidiary plant accounts showing the debit balance of $58,771,709.80 as the actual legitimate original cost of Project No. 1927 as of December 31, 1962, all as more specifically shown in the attached Schedule I, classified by plants and primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission three certified copies of its adjusting journal entries showing compliance therewith and submit two additional copies to the Regional Accountant at San Francisco, California.

---

[2] Article 28 of the license provides for Commission determination of the actual legitimate original cost of the original project and of any addition thereto or betterment thereof. The Commission determined the actual legitimate original cost of the project to be $57,887,975.65, as of December 31, 1957, by its order issued June 30, 1960 (23 FPC 896).

SCHEDULE I

PROJECT NO. 1927 (NORTH UMPQUA)

PACIFIC POWER & LIGHT COMPANY

Summary by subsidiary plant accounts of approved project cost as of Dec. 31, 1957, claimed changes for the period from Jan. 1, 1958, through Dec. 31, 1962, with adjustments thereto, and allowed balances as of Dec. 31, 1962

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-41

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 12, 1964)

On August 10, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP65-41 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon, by sale to Natco Corporation (Natco), approximately 600 feet of 6⅝-inch Cordova Branch Line and approximately 75 feet of 4½-inch pipeline leading to the Natco plant located in Section 7, Township 15 South, Range 6 West, Walker County, Alabama, all as more fully set forth in the application.

The facilities proposed to be abandoned are located on property owned by Natco and lie downstream from Applicant's meter station. It would not impair Applicant's jurisdictional operations nor adversely affect its jurisdictional customers to permit the transfer of the facilities to Natco.

After due notice, no protest, petition to intervene or notice of intervention has been filed herein.

At a hearing held on October 8, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

H. L. HAWKINS & H. L. HAWKINS, JR. (OPERATOR), ET AL., G–18077, ET AL.; W. S. KILROY (OPERATOR), ET AL., G–18175; KILROY PROPERTIES, INC., CI60–478; SUN OIL COMPANY, CI60–348; CALLERY PROPERTIES, INC., G–18857; SKELLY OIL COMPANY, G–20155; PAN AMERICAN PETROLEUM CORP., CI63–677; THE SUPERIOR OIL COMPANY, G–6067

ORDER DISMISSING APPEALS FROM RULING OF PRESIDING EXAMINER AND DEFERRING CONSIDERATION OF REFUNDS

(Issued October 13, 1964)

Various appeals were filed by W. S. Kilroy (Operator), *et al.*, and Kilroy Properties, Inc.,[1] Sun Oil Company,[2] Callery Properties, Inc.,[3] Skelly Oil Company,[4] Superior Oil Company,[5] and Pan American Petroleum Corp.,[6] from rulings

[1] July 31, 1964.
[2] August 6, 1964.
[3] August 10, 1964.
[4] August 6, 1964.
[5] August 12, 1964.
[6] August 5, 1964.

of the Presiding Examiner excluding testimony and exhibits purporting to show certain "equitable considerations" which Appellants urge the Commission to consider in determining whether producers should be required to make refunds.

In addition, Sun Oil Company appeals from a ruling of the Examiner refusing to admit Sun's evidence showing its 1960 company-wide cost of finding and producing natural gas, including rate design. Sun argues that such evidence would have shown that Sun's initial contract price is less than the unit cost of finding and producing such gas and, accordingly, that the proposed contract price is required by the public convenience and necessity.

We can dispose briefly of Sun's contention as to the admissibility of cost-of-service evidence in a certificate proceeding. The courts have repeatedly sustained the Commission in conditioning certificates of public convenience and necessity on an "in line initial price" and excluding cost and other economic data concerning factors other than prices in comparable sales; *Public Service Commission of New York* v. *Federal Power Commission*, 329 F. 2d 242 (CADC–1964), cert. den., 377 U.S. 963 (1964); *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 and *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677.

We are, of course, aware of the opposite result reached in *Callery Properties* v. *F.P.C.*, 335 F. 2d 1004 (CA5–1946), No. 20872. The mandate of the Court of Appeals has been stayed in that proceeding to give the Commission time to file an application for certiorari. In these circumstances we see no reason to depart from the opinions cited above. Consequently, the Examiner was correct in refusing to admit Sun's company-wide cost-of-service evidence purporting to show that the proposed contract price is required by the public convenience and necessity.

The common question in the various appeals however does not relate to evidence which would tend to support the proposed intial price, but rather to evidence showing "equitable considerations,"[7] which would bar refunds under temporary certificates which do not contain express refund conditions. Such excluded evidence consists of (1) so-called "flow-through evidence" showing that local distribution companies have retained varying percentages of refunds ordered by the Commission and; (2) cost studies showing that costs of the producer exceeded revenues. Evidence relating to both of the above categories was striken by the Presiding Examiner on motion of the staff counsel.

Pursuant to the ruling we have just issued in Sinclair Oil & Gas Company, *et al.*, Docket No. G–16760, *et al.* (Turnbull & Zoch Drilling Co. (Operator), *et al.*), it will not be necessary to pass upon the appeals herein with respect to the admissibility of evidence offered in support of "equitable considerations" as a bar to refunds. In that proceeding, we ordered that any consideration of refunds in cases where the temporary certificate does not contain an express refund condition be deferred until further order of the Commission. We shall adopt that policy in the instant proceeding although the record has been closed and evidence relating to the refund issue (except the evidence excluded by the Examiner) has already been incorporated therein. We shall direct the Examiner to restrict his findings to the issues normally relevant in an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act and to defer any consideration of the refund question.

---

[7] In *Public Service Commission of the State of New York* v. *Federal Power Commission*, 329 F. 2d 242, 250, the Court of Appeals referred to the "standard of equity—that is, the issue of a refund * * * turns upon equitable considerations." The Court pointed out, however, that the sole and decisive equitable consideration is not the absence of a refund requirement in the temporary certificate.

The Commission finds:

(1) The issue of whether or not refunds should be ordered to be made by applicants is moot in view of the deferral of that issue until further order of the Commission.

(2) In light of the recent order in Sinclair Oil & Gas Company, *et al.*, Docket No. G–16760, *et al.*, Turnbull & Zoch Drilling Co., Docket No. G–17960, *et al.*, issued on October 5, 1964, *supra*, p. 914, deferring consideration of any evidence with respect to refunds, it is necessary that a separate hearing on that issue be held in the instant proceeding and that the Examiner defer consideration of all evidence with respect to refunds submitted herein.

(3) It would serve no useful purpose to pass upon the various appeals with respect to equitable considerations until such time as a separate hearing is completed on the refund question.

(4) The appeal of Sun Oil Company from the ruling of the Examiner excluding cost-of-service evidence purporting to show that the initial price meets the standard of public convenience and necessity should be denied as contrary to Commission policy and court decisions.

The Commission orders:

(A) The issue as to whether or not refunds should be ordered to be made by applicants operating under temporary authorization and containing no express refund conditions in these proceedings is hereby deferred until further order of the Commission.

(B) The appeal of Sun Oil Company from a ruling of the Presiding Examiner refusing to admit its 1960 company-wide cost of finding and producing natural gas (in order to show that the proposed contract price is required by the public convenience and necessity) is hereby denied.

(C) The appeals of each of the applicants identified at page 991 of this order from rulings of the presiding examiner excluding testimony and exhibits purporting to show certain equitable considerations as a defense to the requirement of making refunds are hereby dismissed.

OPINION NO. 444

MIDWESTERN GAS TRANSMISSION COMPANY, RP61–19, RP62–7; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP63–6

OPINION AND ORDER DETERMINING COST OF SERVICE ISSUES AND REDUCING RATES

(Issued October 13, 1964)*

Syllabus

1. Issue as to proper treatment of depreciation in computing Midwestern's tax allowance for future rates remanded to Examiner for further hearing and decision. P. 996.
2. Pending final determination of depreciation question, Commission utilizes straight line depreciation in determining pipeline's tax allowance, subject to further reduction prospectively to reflect use of liberalized depreciation if such method is finally deemed appropriate. P. 996.
3. Commission *determines* gas rates on basis of 50% income tax rate now in effect, *defers* consideration of use of 48% rate. P. 997.

---

*Initial decision appears on p. 1012.

4. Commission's long-standing practice has been to deduct contributions in aid of construction from rate base. P. 998.
5. Accumulated deferred taxes are in nature of contributions in aid of construction, represent free capital contributions collected from customers, and as such should be deducted from rate base. P. 998.
6. Over-all rate of return of 6.5% found just and reasonable. P. 1000.
7. While resulting return of 9.26% on common equity is lower than that approved for other pipelines, return on equity is not decisive; determination of proper rate of return is matter of judgment which cannot be reduced to mathematical proportions nor turn on a formulistic computation of return on equity—clearly the effect of pyramiding is to enhance return to parent's stockholders. P. 1000.
8. Appropriate level of sales to Michigan Wisconsin to be used in computing Midwestern rates *discussed*. PP. 1001–1002.
9. There is no sound basis for use of parity with U.S. dollars in costing pipeline's Canadian gas. P. 1002.
10. Cost of pipeline's Canadian gas for purpose of fixing rates at this time should reflect average cost of Canadian dollar over 20-month period following test year. P. 1002.
11. Pipeline granted option to file increased or reduced rates geared to upward and downward changes in cost of Canadian dollars; this experimental provision, which departs from general rule of not permitting automatic changes in pipeline rates, is a limited exception made here because of unique circumstances. P. 1003.
12. In proceeding arising under Section 5(a) of the Natural Gas Act, Commission *determines* cost of service and *reduces* rates.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

Ross, *Commissioner:*

This is a consolidated Section 5(a) rate proceeding involving cost of service issues with respect to Midwestern Gas Transmission Company (MGT), and rate design issues with respect to MGT and Natural Gas Pipeline Company of America. Only the cost of service issues with respect to MGT are before the Commission at this time. The presiding examiner has not yet issued an initial decision on the rate design issues. It was in the interest of bringing the cost of service issues to the Commission at the earliest possible date so that the public could have the benefit of any reduction in MGT's rates which the Commission might order that the examiner decided to issue his decision on the cost of service issues before dealing with the rate design issues.

MGT's Southern System rates are the subject of Docket No. RP61-19. Its Northern System rates are involved in Docket No. RP62-7. The examiner, in his initial decision issued April 29, 1964, found MGT's total overall cost of service to be $64,435,917, based upon its operations for the test year ending June 30, 1962, as adjusted. Of this total, the examiner found $22,348,597 to be attributable to the Northern System and $42,087,320 to the Southern System. He found MGT's total revenues to be $71,483,171, of which $24,928,037 is attributable to the Northern System and $46,555,134 to the Southern System. On this basis, he found excess revenues totalling $7,047,254—$2,579,440 on the Northern System and $4,467,814 on the Southern System. The examiner would order an immediate reduction in rates reflecting these amounts. Pending final determination of the rate design issues, he would retain the existing commodity charges on both the Northern and Southern Systems and require the entire rate reduction to be applied to the demand charge. (See Appendix 8 to examiner's decision.)

Briefs on exceptions to the examiner's decision have been filed by MGT, Northern Indiana Public Service Company (Northern Indiana), Northern Illinois Gas Company (Northern Illinois), Peoples Gas Light and Coke Company (Peoples), and the Commission's staff. Reply briefs on exceptions have been filed by MGT, Northern Indiana, Peoples, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), Fuels Research Council, Inc., *et al.* (Coal Interveners), and staff. MGT has moved for oral argument before the Commission on its exceptions.

As can be seen from the index included in the examiner's decision, there was a long list of issues in controversy at the hearing before the examiner. The examiner has carefully set forth the positions of the parties on each of these issues and has analyzed the evidence presented. His reasons in support of his conclusions on these issues are set forth with particularity. To the extent that his conclusions have not been challenged by the briefs and replies on exceptions, we shall adopt his decision as our own. With respect to those issues in controversy on exceptions, we conclude that the following were correctly decided by the examiner and we shall adopt his decision and his reasoning on them as well: unaccounted-for loss or gain; amortization of storage development; allocation of administrative and general expense; legal expense to Illinois firm; tax treatment of right-of-way depreciation; rate of depreciation; working capital; and reduction of demand charge only pending determination of rate design. Our

determination with respect to the remaining issues in controversy on exceptions is set forth below.

Liberalized Depreciation

For the test period, MGT took advantage of liberalized depreciation in filing its tax returns. The examiner, relying on our determination in *Alabama-Tennessee Natural Gas Co.* (Docket No. G–5471, *et al.*, Opinion No. 417, issued February 3, 1964, 31 FPC 208), which was decided subsequent to the conclusion of the hearings in this case and the filing of briefs, utilized liberalized depreciation in computing MGT's tax allowance in its cost of service. However, MGT states in its brief on exceptions that its Board of Directors, on May 11, 1964, adopted a resolution authorizing and directing the utilization of straight-line depreciation in its Federal income tax returns effective January 1, 1963. In view of this directive, MGT contends that it is improper to compute its income tax allowance in fixing future rates as though it were to continue to utilize liberalized depreciation. It further contends that the Commission should not deny the use of straight-line depreciation for rate-making purposes unless the record is reopened in order to permit it to submit evidence demonstrating the reasons underlying the decision of its Board of Directors to use the straight-line method.

The question as to the proper treatment of depreciation in computing taxes for rate-making purposes is one of the most important issues in this case, making a difference of close to $2 million in MGT's total cost of service. It is appropriate, before deciding this question, that MGT be given an opportunity to present evidence to show why it has changed to straight-line depreciation, how the use of liberalized depreciation in computing taxes for rate-making purposes might adversely affect its interests, the effect of its change to straight-line depreciation on the rates to be charged its customers *vis-a-vis* the Commission's determination in Opinion No. 417, the method to be used in applying accumulated deferred taxes against its increased tax costs and any other relevant facts. Other parties and staff should also be given an opportunity to present evidence and to cross-examine and be cross-examined on this issue. Accordingly, we shall remand this issue to the examiner for future hearing and an initial decision. Meantime, to avoid delay in ordering the reduction of MGT's rates with respect to other issues in this case, we shall proceed to fix MGT's rates by utilizing straight-line depreciation in determining its tax allowance. These rates shall be subject to further reduction prospectively to reflect the use of liberalized depreciation in the tax allowance should the Commission finally determine that the liberalized method is the appropriate one to be used.

1965 Reduction of Tax Rate to 48 Percent

Under the Revenue Act of 1964, the corporate income tax rate was reduced from 52 percent to 50 percent, effective January 1, 1964. The law provides for a further reduction in the tax rate from 50 percent to 48 percent as of January 1, 1965. In a motion filed with the examiner on March 20, 1964, staff proposed that MGT's tax allowance be computed on the basis of the 50 percent tax rate. Staff further proposed that there be an automatic adjustment as of January 1, 1965, to reflect the 48 percent tax rate to become effective on that date. In answer to this motion, MGT stated that it had no objection to reflecting the reduction of the income tax rate to 50 percent, but that it would be improper to reflect, by way of future adjustment, the change in rate to 48 percent as of January 1, 1965, without also taking into consideration known changes in other

costs which will occur in 1965, such as the increase in the contract cost of gas purchased from Trans-Canada Pipe Lines, Ltd. (Trans-Canada), which will more than offset the reduction due to the lower income tax rate.

The examiner computed the income tax allowance on the basis of the 50 percent tax rate. However, in view of his treatment of the deduction for depreciation on the basis of liberalized depreciation, the net result of his computation was a zero allowance for taxes. In his judgment, the zero allowance for taxes mooted the question of a future adjustment for reduction of the tax rate to 48 percent, and he made no finding with respect to a future revision. Inasmuch as we are here computing MGT's tax allowance on the basis of straight-line depreciation pending final determination of the depreciation question, the matter of the 48 percent tax rate to become effective on January 1, 1965, is very much an issue.

This same question is presently before the Commission in another case, *i.e.*, *United Gas Pipe Line Co.*, Docket No. RP63–1. In that case we have granted further consideration of the issue on United's application for rehearing, and we have given other parties an opportunity to file answers to United's application for rehearing.[1] Pending final determination of the issue in the *United* case, we shall defer further consideration of the issue in the present case. We shall therefore determine MGT's rates at the present time on the basis of the 50 percent tax rate now in effect, reserving the question of a future adjustment.

Accumulated Deferred Taxes

The examiner found that the deferred taxes should be included in the company's capitalization at a zero cost for the purpose of computing rate of return. The Commission's purpose in *Alabama-Tennessee*, *supra*, to disallow any return on accumulated deferred taxes could be accomplished in either of two ways: by including the amount of deferred taxes in the company's capitalization at a zero cost for the purpose of determining rate of return, or by determining the rate of return without reference to accumulated deferred taxes and deducting the amount of such deferred taxes from the company's rate base. In that case we selected the latter as the method to be used in future pipeline rate cases.

Staff's brief on exceptions restates its position taken before the examiner and urges deduction of the deferred taxes from MGT's rate base. It notes that the record shows an accrual of $3,182,200 as of December 31, 1962, and that MGT's Annual Report for 1963 (Form 2) reflects a total of $4,724,500 as of December 31, 1963. Staff contends that MGT should be required to advise the Commission as to the amount of the deferred taxes currently reflected in Account 282 as allocated between the Northern and Southern Systems so that the full impact of the *Alabama-Tennessee* decision may be reflected in the Commission's order in the present case.[2]

MGT takes the position, in its brief on exceptions and reply, that no adjustment of any kind should be made for deferred accruals in its case because of the unique circumstances. It contends that its financing provided sufficient funds to construct its initial plant and the relatively small additions since initial construction; that it has had no opportunity to invest the deferred tax accruals in its plant; and that it would be improper to deprive MGT of a return

[1] Opinion No. 428–A, issued September 2, 1964, 32 FPC 687.

[2] MGT's reply brief on exceptions, referring to the discontinuation of using liberalized depreciation, effective January 1, 1963, indicated that the restated deferred tax accruals, as of December 31, 1963, are $3,569,600 rather than $4,724,500 as shown in staff's exceptions.

on capital obtained by financing and invested in plant by an adjustment for deferred taxes subsequently accrued and not invested in plant.

In view of the fact that MGT has discontinued taking liberalized depreciation, the correct amount of its accumulated deferred taxes is $3,569,600 as of December 31, 1963. In accordance with *Alabama-Tennessee, supra*, we shall deduct this sum from the company's rate base. Accumulated deferred tax dollars are in the nature of contributions in aid of construction collected by MGT from its customers without cost to itself. It has been the Commission's long-standing practice to deduct such contributions from the rate base; and having now determined that accumulated deferred taxes represent free capital contributions, such accumulations should be treated in the same manner as other contributions in aid of construction. Since it is not possible to track particular dollars of a company's assets into its rate base, we reject MGT's argument that external financing alone was used to construct its initial plant.

Rate of Return

The examiner concluded that a rate of return of 6.5 percent is reasonable and proper for MGT. This is the overall rate of return recommended by staff. MGT contended for an allowance of 7.3 percent.[3] The controversy relates to the return on equity capital which would result from the determination to be made of the overall rate of return. MGT approached this question as though the company were a wholly separate and independent enterprise. Staff and the examiner, however, approached this question on the basis of the reality of Tennessee Gas Transmission Company's parentage and control of MGT.

MGT urged the examiner to allow a return on equity of 13 percent, contending that its thin equity (19.66 percent) involved risks requiring a higher return than for other companies with a thicker equity, and that, as a relatively new venture, it could not reasonably be expected to attract capital on the same return basis as established pipelines. MGT also contended that a lesser allowance would result in low coverage of interest charges which would jeopardize its credit and impair its ability to obtain new debt capital. The examiner, however, could find no justification in the facts of this case for a higher allowance on MGT's equity, which is mostly owned by Tennessee,[4] than the 10.12 percent heretofore found to be adequate for Tennessee.[5] Finding that the staff's recommended overall rate of return would produce a return allowance of 10.46 percent on MGT's equity, more than meeting this test, the examiner concluded that an overall rate of return of 6.5 percent would be reasonable and proper. The examiner further found that this rate of return would adequately safeguard the legitimate interests of MGT's bondholders, and would not impair the company's ability to attract additional debt financing.

As seen, the examiner's finding of a 6.5 percent rate of return rested upon his conclusion that this would result in an allowance on equity of 10.46 percent. The examiner computed the 10.46 percent allowance on equity by using a capitali-

---

[3] In initially certificating MGT's pipeline, the Commission based its determination on a rate-of-return allowance of 6.25 percent on the Southern System (21 FPC 653) and 6.5 percent on the Northern System (24 FPC 844). There has been no previous determination of rate of return in a rate case.

[4] MGT apparently is no longer wholly owned by Tennessee. MGT's brief to the examiner noted that Tennessee on December 10, 1963, would distribute to its shareholders one share of MGT common for each 200 shares of Tennessee common held as of November 15, 1963. MGT's brief on exceptions indicates that this distribution has resulted in ownership by others of more than 10 percent of MGT's stock.

[5] In *Tennessee Gas Transmission Co.*, 24 FPC 204, affirmed, 293 F. 2d 761 (CA 5), the Commission approved an overall rate of return of 6.125 percent for Tennessee, concluding that the resultant return on equity of 10.12 percent was fully adequate.

zation which included deferred taxes of $3,182,200 at zero cost. The examiner's departure from *Alabama-Tennessee, supra*, in so including accumulated deferred taxes in the company's capitalization has been noted already. Staff's brief on exceptions takes issue with the examiner's computation and sets forth the following calculation based on an overall rate of return of 6.5 percent:

Capital	Amount	Percent	Cost	Rate/return (percent)
Long-term debt	$59,979,000	68.88	5.88	4.050
Preferred stock	10,000,000	11.48	5.50	.631
Common equity	17,125,973	19.66	9.26	1.82
Total	87,104,973	100.00		6.50

This calculation shows that a 6.5 percent overall rate of return would produce a return on equity of 9.26 percent, not 10.46 percent as found by the examiner.

Although staff takes exception to the examiner's computation of a return on equity of 10.46 percent and to his reliance thereon in allowing an overall rate of return of 6.5 percent, staff does not object to his conclusion that 6.5 percent is the proper overall rate of return. Staff's position is that when the "double leverage" effect of MGT's affiliation with Tennessee is considered, there is sufficient reason for MGT realizing less of a return on equity than that found appropriate for Tennessee.

The examiner did not rely on the "double leverage" technique as a basis for his determination; and because he did not rely on it, he found that no purpose would be served by discussing it. Staff takes exception. The "double leverage" effect, which is sometimes known as "pyramiding," arises from the fact that MGT's equity capital is owned substantially by Tennessee, and that Tennessee's investment in MGT must be considered to represent the investment of debt dollars and equity dollars in proportion to Tennessee's capitalization ratios. Thus, the return on MGT's equity becomes the overall rate of return on Tennessee's investment in MGT; and to the extent that Tennessee's investment represents debt capital with an imbedded cost lower than this rate of return, the return to it on that portion of its investment representing equity capital is increased. Moreover, as the return on equity to MGT increases, the return on Tennessee's equity invested in MGT increases geometrically.[6] To illustrate this effect, staff presented Exhibit No. 5b. If the figures shown on that exhibit are adjusted to reflect *Alabama-Tennessee, supra*, by eliminating accumulated deferred taxes from capitalization, the return on Tennessee's equity dollars invested in MGT and the return on MGT's equity, assuming an overall rate of return to MGT of 6 percent, 6.5 percent, and 7 percent, are as follows:

Overall MGT rate of return	Allowance on MGT's equity	Allowance on Tenn's equity invested in MGT
6 percent	6.71 percent	12.06 percent.
6.5 percent	9.26 percent	21.16 percent.
7 percent	11.80 percent	30.23 percent.

[6] The "double leverage" effect is greater or less depending on the capitalization ratios of the parent company. Tennessee has a high percentage of debt capital, and a low percentage of equity capital, *i.e.*, 57.91 percent debt, 14.07 percent preferred stock, and 28.02 percent common stock. As debt increases in relation to equity, the "double leverage" effect becomes more pronounced.

It is staff's position that these figures demonstrate the special advantage that Tennessee's equity holders enjoy through Tennessee's control of MGT. Although there is no precedent for determining at what point the return to Tennessee's equity holders becomes excessive, staff apparently feels that an overall return of 6.5 percent to MGT, which is in line generally with the rate of return allowed by the Commission for other pipelines, is reasonable and proper, and will result in neither excessive returns to Tennessee's equity holders nor inadequate returns to those now publicly holding MGT shares.

MGT's brief on exceptions reiterates its position before the examiner. It argues that the examiner failed to give weight to its high cost of debt (5.88 percent) and to its thin equity (19.66 percent), and that on comparison with other pipeline companies it should receive an allowance of 13 percent on equity. With regard to its affiliation with Tennessee, MGT argues that regardless of who owns the controlling common stock, the fact remains that by financing with a thin equity the equity owner takes more risks because of the greater fixed obligations placed against future earnings of the company. MGT objects to having its allowance on equity tied to the allowance of 10.12 percent previously allowed to Tennessee because (1) the *Tennessee* case involved a record now 4 years old; (2) that case did not decide a return on equity to be applied to a combined Tennessee-Midwestern system; and (3) it is unrealistic to look at MGT as simply an expansion of Tennessee's own plant, since MGT was separately financed, its Northern System is not physically connected with Tennessee, and both its Northern and Southern Systems serve separate markets from those historically served by Tennessee. Finally, MGT contends that an equity investment in MGT is not the same as an equity investment in Tennessee; and that, although their affiliation is a relevant factor to be considered, it cannot be given the controlling weight given it by the examiner.

We are of the opinion that 6.5 percent is a just and reasonable overall rate of return for MGT, and in our judgment is adequate to meet MGT's needs in attracting capital and preserving its financial integrity. We recognize that the resulting return on MGT's common equity of 9.26 percent is lower than that approved for other pipelines; but return on equity is not decisive (see ***El Paso Natural Gas Co.***, Docket No. G–4769, *et al.*, 28 FPC 688, rehearing denied 28 FPC 952) and the determination of a proper rate of return is a matter of judgment which cannot be reduced to mathematical proportions and which cannot be made to turn upon a formulistic computation of return on equity.

MGT is controlled by Tennessee. Its equity capital was furnished by Tennessee, and there is no reason to assume that Tennessee will not continue to be its primary source of equity capital. Accordingly, in considering the attraction of capital to MGT it is necessary to look to the effect of the rate of return on Tennessee's investors. We do not believe that the 6.5 percent rate of return herein allowed for MGT will dim the luster of Tennessee's stock in the eyes of investors. As already noted, our initial certification of Midwestern's pipeline was based on a projected rate of return of 6.5 percent for the Northern System and 6.25 percent for the Southern System. These initial determinations in no way impaired the financing of Midwestern's systems and there is no indication that the attractiveness of Tennessee's common stock was reduced by its investment in MGT.

Although we do not place any particular reliance on the "double leverage" theory as a formula to be applied in such cases, staff's figures are helpful to show that the return on equity to a subsidiary is not a measure of the return to the parent's stockholders whose funds have been invested in the subsidiary. Clearly, the effect of pyramiding is to enhance the return to the parent's stockholders.

The 6.5 percent rate of return which we are here allowing is higher than that recently allowed to MGT's parent, Tennessee, and it is as high or higher than that on which MGT's systems were financed and built. In our judgment the allowance is adequate and proper, and is in accord with the principles and standards set forth by the Supreme Court in *Bluefield Water Works and Improvement Co.* v. *Public Service Commission of West Virginia*, 262 U.S. 679, and in *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591.

Sales to Michigan Wisconsin

There are several issues in this case relating to the amount of MGT's revenues to be used in testing the reasonableness of MGT's rates. The most important of these issues involves MGT's Northern System sales to Michigan Wisconsin Pipe Line Co. under its CD–2 rate schedule. The amount in dispute is more than $2 million.

Relying on evidence presented by Michigan Wisconsin, the examiner found that the proper volume of gas to be attributed here to Michigan Wisconsin's purchases from MGT is either 49,217,000 Mcf or 53,443,500 Mcf, depending upon whether MGT's minimum bill is determined to be 75 percent or 87.5 percent. The minimum bill question is presently before the Commission in another MGT proceeding, *i.e.*, Docket No. RP64–8. In that case, MGT filed for an increase in its minimum bill from 75 percent to 87.5 percent to offset an increase in its take-or-pay obligation to Trans-Canada to 95 percent, which became effective December 15, 1963; and on October 16, 1963, the increase was put into effect subject to refund pending the Commission's final order in the case. To take into account the results of that proceeding, and to avoid any unnecessary windfall to MGT while at the same time protecting MGT against any unjustifiable loss should the higher minimum bill be disallowed, the examiner decided that MGT's rates should be determined on the basis of assumed Michigan Wisconsin takes of 49,217,000 Mcf, but subject to appropriate refund conditions and a requirement that MGT's rates be reduced to a level reflecting takes of 53,443,500 Mcf if the Commission approves the 87.5 percent minimum bill in Docket No. RP64–8.[7] Exceptions have been filed by both MGT and staff.

This issue of sales to Michigan Wisconsin has been one of the most controversial issues in this case. The record, however, gives substantial support to the examiner's findings with respect to the volumes of gas which Michigan Wisconsin would take at a 75 percent or 87.5 percent minimum bill, and we adopt his findings as our own.[8] In view of our order issued today in Docket No.RP64–1 approving MGT's 87.5 percent minimum bill, we find the appropriate level of sales to Michigan Wisconsin to be used in computing MGT's rates to be 53,443,500 Mcf.

With the increased sales to Michigan Wisconsin under the 87.5 percent minimum bill, the record shows that MGT would still have to pay for gas not taken from Trans-Canada in the absence of increased transfers of gas from its Northern to its Southern System under its exchange agreement with Michigan Wisconsin. That agreement permits MGT to deliver up to 30,000 Mcf per day, or 10,950,000 Mcf annually, to Michigan Wisconsin for redelivery on its South-

[7] The examiner issued his decision in Docket No. RP64–8 on July 15, 1964, *infra*, p. 1088, approving the proposed 87.5 percent minimum bill. No exceptions have been taken to the examiner's recommended order, although there have been several exceptions to certain language and subsidiary findings in his decision. We are today issuing an order adopting the examiner's decision in Docket No. RP64–8, *infra*, p. 1087.

[8] The examiner in Docket No. RP64–8 reached the same conclusions with respect to the level of MGT's sales to Michigan Wisconsin.

ern System. MGT's Exhibit No. 33, showing the effect of the 95 percent take-or-pay provision on its cost of purchased gas, indicates that MGT would seek to avoid the payment of penalties to Trans-Canada to the extent possible by increasing its transfers of Trans-Canada gas to the Southern System to the limit of its exchange agreement, and that MGT would use such exchange gas on its Southern System in place of higher cost gas purchased from Tennessee.[9] Accordingly, MGT's cost of service should reflect the full cost of the 70,737,000 Mcf which MGT is obligated to pay for under its Trans-Canada contract, and it should also reflect a reduction of its cost of gas purchased from Tennessee to the extent of the increase in exchange deliveries to the Southern System resulting from the 95 percent take-or-pay provision in the Trans-Canada contract. On the basis of sales to Michigan Wisconsin of 53,443,500 Mcf, MGT's Northern System requirements will be 60,985,092 Mcf, and the exchange required to avoid penalty under the Trans-Canada contract will be 9,751,908 Mcf.[10]

Canadian Exchange Rate

MGT's contract with Trans-Canada requires that it pay Trans-Canada for purchased gas in United States dollars "in an amount being the then equivalent of the amount so billed in lawful money of Canada." On May 2, 1962, shortly before the end of the test year, the Canadian Government pegged the Canadian dollar at 92.5 U.S. cents. In presenting their cases to the examiner, staff took the position that the cost of Trans-Canada gas to MGT should be determined by applying a 92.5 percent conversion factor, while MGT contended that this cost determination should be made on the basis of parity. The difference between staff's and MGT's treatment of this issue is over $1 million in the cost of service. The examiner adopted staff's position that the cost of gas should reflect the official rate of exchange.

MGT takes exception to the examiner's conclusion. First, it points out that the Canadian Government has permitted fluctuations of up to one percent above or below the pegged exchange rate, and that over the 20-month period immediately following the test year the average exchange rate paid has been 92.75 cents. At the very least, MGT argues, it should be permitted to recoup this 92.75-cent exchange rate. Second, MGT reiterates the testimony of its witness Nathan as to the reasonable probability that in the relatively near future the Canadian dollar not only will rise substantially above 92.5 U.S. cents, but may well reach parity with the U.S. dollar. In view of this probability, MGT contends that it should not be exposed to the risk of incurring substantial losses by virtue of increases in the value of the Canadian dollar.

There is no sound basis for the use of parity in costing the Trans-Canada gas. On the other hand, the use of the official rate of exchange would give no recognition to actual fluctuations in the exchange rate as evidenced by the 92.75-cent average cost of Canadian dollars over the 20-month period following the test year. In our judgment, the cost of MGT's Canadian gas for the purpose of fixing MGT's rates at this time should reflect the 92.75-cent average exchange rate. This average represents the actual cost of MGT's Canadian gas in U.S. dollars over a representative period, and it represents the most accurate guide to what the actual exchange will be in the future so long as the official rate is pegged at the present level.

---

[9] Tennessee's minimum bill to MGT is 66.67 percent as compared to MGT's minimum bill for sales to its Southern System customers of 75 percent.

[10] MGT's requirements figure is derived from Exhibit No. 33 with appropriate adjustments to reflect the higher Michigan Wisconsin sales, a proportional increase in the gas used by the company, and the elimination of unaccounted-for losses.

In the event the official exchange rate is changed or eliminated, and the cost of Canadian dollars increases, we shall allow MGT to file revised tariff sheets to reflect each one whole percentage-point increase above the rate reflected in the tariffs effective at that time. Should MGT exercise this option to file increased rates, we shall thereafter require it to file reduced rates whenever the cost of Canadian dollars decreases by one whole percentage point below that reflected in the then effective tariffs. In this manner, if the official rate of exchange should vary significantly in the future, both upward and downward changes in the cost of Canadian dollars will be reflected in MGT's rates.[11] Consistent with our determination with respect to other reductions and changes in MGT's rates required herein, any change in rates should be reflected in the demand component of MGT's rates until further order.

We recognize that this provision, which is experimental on our part, departs from our general rule of not permitting automatic changes in pipeline rates. We are making a limited exception in this instance only because of the unique circumstances involved, *i.e.*, the exchange rate is a factor which is totally outside the influence of MGT and other natural gas companies, as well as the Commission. Moreover, we will carefully watch the working of this provision with the view to taking any corrective action that may be appropriate.

Southern System Rate Reductions

In setting forth the new rates for MGT, the examiner included under the Southern System only MGT's CDX–1 rate. Exceptions to this limitation have been filed by Northern Indiana and Northern Illinois which purchase gas from MGT under rates CD–1 and SI–1.

It seems clear that the examiner should have applied his Southern System reductions to all of MGT's rates on that system, *i.e.*, rates CD–1, CDX–1, SI–1, and SR–1.

Refunds From Tennessee

The examiner made no provision in his recommended order for passing along refunds received by MGT under the Tennessee rate settlement in Docket Nos. G–11980, G–17166, and G–19983, approved by the Commission on December 21, 1962, 28 FPC 1100. Peoples filed exceptions to this omission, contending that MGT has a continuing obligation to pass on all refunds and rate reductions received pursuant to this settlement by reason of a settlement between MGT and its Southern System customers approved by the Commission on October 30, 1963, and by reason of the Commission's order issued May 12, 1959, in Docket No. G–16841 (Opinion No. 320, 21 FPC 653). Peoples takes the position that it is desirable, and perhaps necessary, to specifically provide in the order to be issued here that MGT has an obligation to act as a conduit for refunds and rate reductions received from Tennessee.

Northern Indiana filed a reply to Peoples' proposal, agreeing generally therewith, but taking issue with the suggestion that the refunds and rate reductions should be reflected in MGT's demand charge. Northern Indiana would have the refunds and rate reductions allocated on the ratio of purchase volumes and reflected in the commodity component of MGT's rates.

We shall make appropriate provision in our order for the flow-through of refunds and rate reductions received by MGT from Tennessee. To maintain the competitive design of MGT's rates, reductions in its rates to reflect such benefits shall be incorporated in the demand component of its rates.

---

[11] This provision is to give recognition only to changes in the rate of exchange applicable to MGT's purchases of Canadian gas, and not to changes in the cost of the gas itself which is fixed in Canadian dollars under the Trans-Canada contract.

Miscellaneous

MGT, in its brief on exceptions, makes note on a number of technical errors in the examiner's computation of the company's cost of service. The points noted are well taken, and we shall make the necessary corrections in our computation of MGT's cost of service.

CONCLUSION

The total overall cost of service here determined for MGT, based on its operations in the test year ending June 30, 1962, as adjusted, is $66,673,048, of which $24,061,775 is attributable to the Northern System and $42,611,273 is attributable to the Southern System. Total revenues are determined in the amount of $70,403,661, of which $25,878,111 is attributable to the Northern System and $44,525,550 is attributable to the Southern System. On this basis, MGT's excess revenues total $3,730,613: $1,816,336 on the Northern System and $1,914,277 on the Southern System.[12]

We shall require MGT, as of the date of this opinion and order, to reduce its rates so as to eliminate all excess revenues. As previously noted, the rate reduction shall be applied to MGT's demand charges and the existing commodity charges shall be retained pending final determination of the rate design questions which are still before the examiner.

The Commission further finds:

(1) MGT is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this opinion and order are sales of natural gas in interstate commerce and are subject to the jurisdiction of the Commission.

(2) MGT's just and reasonable rates in Docket Nos. RP61–19 and RP62–7 from and after the date of this opinion and order, subject to the provisions for refunds and reductions set forth in Paragraph (B) of the order below and the adjustments set forth in Paragraphs (D), (E), and (F), are as follows:[13]

Rate schedule	Demand charge	Commodity charge (cents)
Northern System:		
SR–2		56.01
CR–2	$3.77	25.01
CD–2	3.77	25.01
I–2		25.01
CRL–2	4.02	25.01
Southern System:		
CDX–1	3.03	22.0
CD–1	3.03	22.0
SR–1		46.92
SI–1		26.98

(3) MGT should be required to file substitute tariff sheets, subject to the approval of the Commission, containing the rates herein found to be just and reasonable as set forth in Paragraph (2) above.

The Commission orders:

(A) Within 45 days from the date of issuance of this opinion and order, MGT shall file substitute tariff sheets, effective as of the date of this order, satisfactory to the Commission containing the rates herein found to be just and reasonable in Docket Nos. RP61–19 and RP62–7, as set forth in Paragraph (2) of the findings above.

[12] See Appendix No. 1 attached hereto.
[13] See Appendix No. 8 attached hereto.

(B) MGT shall pass along to its Southern System customers all refunds and rate reductions received by it from Tennessee. Such refunds by MGT shall be made within 30 days after the receipt thereof by MGT and shall include any interest thereon received by MGT. Rate reductions by MGT shall be made effective as of the effective date of the Tennessee rate reductions which they reflect. The refunds and rate reductions herein required shall be distributed and effected in the following manner until otherwise ordered:

1. The principal amount of the refunds shall be distributed among MGT's Southern System customers in the ratio of the sum of their respective billing demands to the total of such sums for the period relative to which such refunds are made. In the case of CD customers, the billing demands shall include the equivalent demand billed for allowable variations. In the case of customers purchasing under single-part rate schedules, the billing demands shall be computed by (a) multiplying the volumes purchased by the commodity charge in MGT's CD–1 rate schedule, (b) subtracting this product from the revenue received by MGT from the customer during the period in question, and (c) dividing the remainder by the monthly demand charge in the CD–1 rate schedule. Interest received from Tennessee shall be distributed in the same ratio as the principal amounts of the refunds to which such interest relates.

2. Rate reductions shall be effected by reducing the level of the demand component in MGT's rate schedules. The amount of each such reduction shall be equivalent to the reduction in MGT's cost of purchased gas resulting from the reduction of Tennessee's rates, computed on the basis of the most recent 12-month period as though such reduced rates had been in effect for that period. The reduced rates thus computed shall be rounded to the nearest one cent per Mcf of billing or imputed demand.

(C) Within 30 days of making the refunds required by Paragraph (B), MGT shall report to the Commission in writing and under oath the details of its calculations resulting in the refunds together with copies of releases from each of its jurisdictional customers sharing in the refunds.

(D) The question of the depreciation to be used as a deduction in computing the tax allowance in MGT's cost of service is hereby remanded to the examiner for hearing and initial decision in accordance with the foregoing opinion. The rates herein fixed on the basis of straight-line depreciation are subject to adjustment upon further order of the Commission to reflect the Commission's final disposition of this issue.

(E) In the event the official Canadian dollar rate of exchange, which is presently fixed by the Canadian government at 92.5 cents in U.S. currency, should be changed or eliminated, and the cost of Canadian dollars increases, MGT may file revised tariff sheets to reflect each one whole percentage-point increase in the rate of exchange above the rate reflected in the tariffs then in effect. Should MGT exercise this option to file increased rates, MGT shall thereafter file reduced rates whenever the cost of Canadian dollars decreases by one whole percentage-point below the rate of exchange reflected in the then effective tariffs. In all other respects, MGT's rates shall continue to reflect the cost of service and the method of rate computation used by the Commission in this proceeding. Until further order of the Commission, any changes in MGT's rates as a result of an official change in the rate of foreign exchange shall be reflected in the demand component only.

(F) The question whether MGT should be required to file substitute tariff sheets as of January 1, 1965, reflecting the reduction in the Federal income tax

rate to 48 percent on that date is hereby reserved pending final determination of the same question in *United Gas Pipe Line Co.*, Docket No. RP63–1.

(G) With the exception of those issues specifically discussed in the foregoing opinion, and to the extent that it is consistent with this opinion and order, the examiner's decision in this proceeding, issued April 29, 1964, is hereby adopted as the decision of the Commission.

(H) Except as granted by this opinion and order, the exceptions to the examiner's decision are hereby denied.

(I) MGT's motion for oral argument on its exceptions is hereby denied.

COMMISSIONER O'CONNOR *concurring.*

APPENDIX NO. 1

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP61–19

COST OF SERVICE AND EXCESS GAS SERVICE REVENUES FOR 12 MONTHS ENDED JUNE 30, 1962

	Total company	Northern System	Southern System
Operating expenses:			
Other gas supply expenses	$52,227,426	$16,540,047	$35,687,379

[1] Reflects CD-2 rate level at 40% load factor.
[2] Reflects CDX-1 and CD-1 rate level at 40% load factor.
[3] Reflects CDX-1 and CD-1 rate level at 200% load factor.
[4] No sales were made during the test year under these rate schedules. Rates are designed therefor, since sales are now being made. By letter dated 6/28/63, the Commission accepted SR-1 for filing as an initial rate schedule, but conditioned acceptance to require Midwestern to revise rate to level of CD-1 rate in these proceedings at 40% load factor.

O'CONNOR, *Commissioner, concurring:*

With one exception, I join in the decision reached herein. This exception, however, necessitates a brief statement of my position.

I am alarmed over the majority's elusive reference to the "double leverage" theory in their determination of Midwestern's rate of return. The theory, rejected by the examiner and unmentioned in the briefs on the exceptions, is ostensibly raised to be disavowed, but the disavowal lacks the finality deserved.

The theory's effect is to treat as equity only that portion which represents the parent's percentage of equity. Thus, only $4.7 million of Midwestern's $17.1 million equity would be treated as such and allowed a commensurate return. This treatment would be most unreasonable for subsidiaries, such as Midwestern, which have issued their debt and preferred capital independently, and not through their parents. In such cases, the normal equity risks fall on the full $17.1 million, and not on an imputed portion.

The theory is, as the Examiner found, neither meaningful nor reliable, and it cannot be passed off as a valid extension of the "capital attraction" theory. Its conceptual weakness lies in its preoccupation with the return the parent company shareholders receive on their investment in the subsidiary—the "levered" return—rather than with the weighted average return on the combined equity. This levered return is irrelevant. The attraction of equity capital to the subsidiary will depend upon the combined return on equity generated by an investment in the parent, and not upon the return yielded by a hypothetically separate investment in the subsidiary.

Even in the relatively simple context of the wholly-owned subsidiary relationship, the complexities of application, could be insurmountable. Suppose, for example, that the subsidiary's parent were in turn a subsidiary. Logical application of the concept would dictate imputing the primary parent's capital

structure to the secondary parent, and the resulting imputation to the subsidiary. Would this same treatment be accorded if the primary or secondary parent were non-jurisdictional? If, instead of being wholly owned, the subsidiary or its parent were owned by several non-affiliated companies, which capital structure would be imputed to the subsidiary? Intermixed in the infinite structural possibilities is Staff's proviso that the application of the leverage theory could be determined by the extent of the subsidiary's retained earnings. At what point would these earnings become determinative? Would there also be a point where, although not determinative of application, they would be determinative of weight? More importantly, even if these multiple imputations could be made, and the significance of the retained earnings assayed, how would they be meaningfully translated into rates?

Once one leaves the relatively simple context of the wholly-owned subsidiary and enters into the realm of the partially-owned, the leverage concept becomes truly absurd. Combined with the above technicalities, one now has the added problem of tracing the indirect and direct ownerships, and determining if, and how, a differing return is to be allowed to each. Not only is application reduced to a humorous futility, but, as Staff readily admits, one reaches a point on the direct-ownership spectrum—approximately where Midwestern now lies—where the concept would not even be applicable.[1]

When shorn of its technical trappings, the concept is but another specious rationale to be used in lowering rates of return to companies solely because of their affiliation. If this is the end sought, then the end is unjustified. If this is not the end sought, then the concept has no meaning. The Commission should either take this opportunity to explicitly so state, or else refrain from dignifying it with comment.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON A CONSOLIDATED PROCEEDING UNDER SECTION 5(a) OF THE NATURAL GAS ACT

ZWERDLING, *Presiding Examiner:* This is a consolidated Section 5(a) rate proceeding involving cost of service issues with respect to Midwestern Gas Transmission Co. (Midwestern), and rate design issues with respect to Midwestern and Natural Gas Pipeline Co. of America (Natural).

On February 13, 1961 the Commission instituted a proceeding in Docket No. RP61–19 to determine whether the rates, charges and classifications of Midwestern for sales from its Southern System are just and reasonable as required by Section 5(a) of the Natural Gas Act. This order was an outgrowth of the Commission's directive in Opinion No. 320 (21 FPC 653), certificating Midwestern's Southern System, that Midwestern should file a new rate schedule within 1 month after its first full year of operation, and that a Section 5(a) hearing would then be scheduled to permit prompt inquiry into the justness and reasonableness of the rate filed. On May 28, 1962, the Commission in Docket No. RP62–7 instituted a Section 5(a) investigation of the justness and reasonableness of Midwestern's rates, charges and classifications for sales and exchanges from its Northern System. This order was an outgrowth of the Commission's directive in Opinion No. 331 (22 FPC 775), certificating Midwestern's Northern System, that Midwestern at the end of 1 year's operating experience should file revised rate schedules, to be followed by Commission review of the Northern System rates. By order issued February 18, 1963, the Commission consolidated Docket Nos. RP61–19 and RP62–7 for purposes of hearing and decision, established procedures and fixed a date for prehearing conference. Subsequently, on February 25, 1963, the Commission instituted a Section 5(a) proceeding with respect to Natural in Docket No. RP63–6, limited to the question whether the design of Natural's two-part demand and commodity rate is just and reasonable and not unduly preferential or discriminatory. The order consolidated Docket No. RP63–6 for purposes of hearing and decision with Docket Nos. RP61–19 and RP62–7, *supra.*

Prehearing conferences were held on March 21 and 22, and May 20, 1963. The cross-examination hearing commenced on July 15, 1963, and was concluded on October 17, 1963. The case developed two phases—(1) a *cost of service* phase involving Midwestern alone, in which the Staff contends (according to its latest adjusted figures) that the company has earned excess revenues of approximately $8,000,000 in the normalized test year of July 1, 1961–June 30, 1962; and (2) a *rate design* phase involving both Midwestern and Natural. In the rate design phase the Coal Intervenors[1] propose that Midwestern's present two-part demand-commodity rates be converted to a flat one-part rate, with no minimum bill. The Coal Intervenors also attack the existing rate design of Natural, although they do not set forth in any clear way the precise type and level of rates which they recommend for Natural. None of the other parties, including Staff, support any change in the existing basic rate design of Midwestern or Natural. In addition to the basic rate design issue, Staff proposes

[1] Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, and Mid-West Coal Producers Institute, Inc.

elimination of the existing 25-cents per Mcf lateral line charge embodied in the demand component of Midwestern's CRL–2 rate, applicable to certain of its Northern System customers. None of the customers subject to this charge have supported the Staff proposal.

Both the cost of service phase of the proceeding, affecting Midwestern alone, and the rate design phase affecting both Midwestern and Natural, developed substantial controversy which became the subject of extensive testimony during the hearing and extensive briefs. Final briefs on the cost of service issues were submitted on December 27, 1963, and final briefs on the rate design issues were submitted on March 14, 1964.

Although the Presiding Examiner's initial decision on the cost of service issues is now completed, it has not been possible due to the exigencies of the time schedule to deal with the rate design issues at this time. Furthermore, this Presiding Examiner is involved in the South Louisiana Area Rate proceeding (AR61–2), in which an extended cross-examination hearing commences on April 22, 1964, to continue without substantial interruption to its conclusion, under a directive from the Commission that hearing and decision in that case be expedited in every way possible. The instant Midwestern proceeding is a Section 5(a) proceeding, in which any reduction of exisiting rates which may ultimately be adopted by the Commission will become effective only from and after the date of the Commission's final decision. Under these circumstances, it is concluded that the public interest requires a prompt determination of the controverted cost of service issues, and that it would be contrary to the public interest to defer such a decision for the extended period which will be required before the Presiding Examiner will be in a position to issue an initial decision on the rate design issues. The Presiding Examiner has accordingly earlier made it clear to the parties that he proposed to issue a prompt initial decision with respect to the cost of service issues, fixing rates on the basis of Midwestern's *existing* rate design, and deferring consideration and resolution of the rate design issues to a later stage. The Coal Intervenors, who alone proposed a change in the existing rate design of Midwestern and Natural, have expressed no objection to this procedure.

Accordingly, the instant decision will be confined to the cost of service issues in this proceeding, relating in Midwestern alone.

Both the Staff and Midwestern submitted in evidence cost of service studies using the twelve months ended June 30, 1962 as the test period, with adjustments for known changes. The final cost of service now claimed by Midwestern is $67,995,430 (initial brief, Appendix A). Staff's final recommended cost of service amounts to $64,081,173.[2] Midwestern's final estimated revenue figure is $67,476,866, as compared with Staff's final figure of $69,536,669 (Exh. 55–A). In addition, both Midwestern and Staff reflect the net effect of increased sales to Northern Illinois Gas Co. pursuant to Docket No. CP63–149, as producing an upward adjustment to excess revenues in the amount of $617,000. (Staff initial brief, p. 71; Midwestern intial brief, Appendix A.) The Staff thus derives an excess revenue figure of $6,072,496, as compared with Midwestern's excess revenue figure of only $98,436. However, by motion submitted March 20, 1964, Staff contends that the Commission's recent *Alabama-Tennessee decision*, Op. No. 417, 31 FPC 208, requires the flowing through of tax benefits resulting from the use of liberalized depreciation; that this requires a recalculation of Midwestern's Federal income tax allowance in the instant cost of service, resulting in a *zero* tax allowance in place of the $1,892,483 Federal income tax allowance previously

[2] Staff initial brief, Appendix p. 1, after removing the CP63–149 cost adjustments.

included in the Staff cost of service. The adoption of this new cost of service adjustment would increase Staff's claimed excess revenue figure to $7,964,979.

At the outset of the proceeding, there existed a disagreement between Midwestern and the Staff regarding the *original cost* of a number of items of Midwestern's plant. However, these disagreements were resolved by a stipulation dated July 15, 1963, which the Commission approved by letter of July 24, 1963. On the basis of this stipulation, Midwestern's average gross plant in service for the test year, adjusted for specific plant additions, was $89,354,500. (Exh. 59–A, footnote 1)

I. Operating Expenses

A. *Affect of Canadian Exchange Rate on Computation of Midwestern's Purchased Gas Cost From Trans-Canada*

Midwestern purchases the gas required to serve customers on its Northern System from Trans-Canada Pipe Lines Limited (Trans-Canada) under a contract date May 14, 1960. (Exh. 30) Article IX of this contract provides:

> All payments under this contract shall be made to the First National City Bank of New York, New York, in United States dollars *in an amount being the then equivalent of the amount so billed in lawful money of Canada.* [Emphasis supplied.]

On May 2, 1962, shortly before the end of the test year used in this proceeding, the Canadian Government pegged the Canadian dollar at 92.5 U.S. cents. Accordingly, Staff contends that the cost of Trans-Canada gas to Midwestern should be here determined by applying a 92.5 percent conversion factor to the rate paid by Midwestern. Midwestern, on the other hand, contends that this cost determination should be made on the basis of parity. Based on Midwestern's Northern System sales as originally estimated in the Staff's direct case, the difference between Staff and Midwestern on this issue would be $1,280,707. (Exh. 25, Sch. 2, Col. 6)

In support of its position Midwestern relies upon testimony presented by its economic witness, Robert R. Nathan,[*] based upon a study of the history of the Canadian dollar and factors determining its value in the international monetary market. Nathan expressed the view in his direct testimony that:

> * * * based on a review of the history of the relationship of the Canadian-United States dollars and the economic factors which go to make up that history, that it is unlikely that the exchange rate for Canadian-United States dollars will remain fixed at or around 92.5%. (3: 462)
>
> * * * * * * *
>
> In my opinion it would not be realistic to assume that the current rate will continue for several years. (3: 482)
>
> * * * * * * *
>
> * * * it is my opinion that the most reasonable prospect for the rate of exchange of the Canadian dollar for the next several years is that it will become par with the U.S. dollar. (3: 486)

Nathan observed that in the 17 years since 1946, when the Canadian Government restored the historic parity of the Canadian-U.S. dollars, the official value of the Canadian dollar had been below parity with the U.S. dollar for only two brief periods (3: 468, 474); that the Canadian dollar rose to a premium in terms of U.S. dollars by February 1952, and thereafter, until June 1961, was almost always above par with the U.S. dollar. (3: 471; Exh. 27, Tables 1 and 2)

---

[*] An outstanding economist and private consultant.

Nathan expressed the view that "It is not possible to predict future exchange rates, past experience in my opinion is the best guide." (3: 483) He then set forth his basic thesis as follows:

> As the employment situation improves, as the balance of payments becomes stronger, as the accumulation of monetary reserves increases the money supply, the policies of the Canadian government will, in my opinion, again place greater emphasis on price stability. These conditions are emerging at this time and will probably be more powerful in the future. The only way the Government can avoid inflation in these circumstances would be to appreciate the Canadian dollar. (3: 482)
>
> * * * * * * *
>
> During the past year the economic situation in Canada has improved considerably and the balance of payments position has shown signs of renewed strength. It appears to be only a matter of time until the Canadian dollar will again return to parity with the U.S. dollar.
>
> Present circumstances, as described previously, are analogous to those in earlier years when the Canadian Government either raised the official exchange value of the Canadian dollar or let the rate rise in a freely fluctuating market. It is reasonable to suppose that the Canadian dollar will again appreciate as long as the balance of payments' position remains strong, production continues increasing at a satisfactory rate, and rising prices continue to exert inflationary forces. (3: 485)

Midwestern concludes that this testimony "plainly demonstrates the overwhelming probability that the Canadian dollar will return once again to parity, or above, within the foreseeable future, rather than remain at its present depressed level." (Initial brief, p. 30) However, this categorical and sweeping assumption is placed in more realistic perspective if attention is directed to certain careful limitations expressed by witness Nathan during cross-examination, as follows:

1) Nathan would *not* predict that within the next two years the Canadian dollar would return *to par*, or that the *average* exchange rate for the next two years would be *at or near par*. He merely felt that "there would be a tendency to return toward par within that period." (9: 1340, line 16–1341, line 3)

2) He felt that

> * * * there are so many factors influencing the exchange determination that it is exceedingly difficult to project either *specific levels or precise times* at which changes in policy are likely to be made * * * (9: 1340)

Past experience did not tell him *when* the Canadian dollar would *tend* to return to par. (9: 1341, lines 11–14)

3) His estimate of the future was as follows:

> * * * *if* Canada finds that as a result of the devaluation her foreign exchange reserves have risen as they have, and they are satisfactory and her internal economic conditions are satisfactory in terms of unemployment and production and, therefore, it is time now to fight inflation because prices have risen there, then I think they *could* move in one of two ways * * *
>
> One is to go off of the official exchange rate again, and my guess is it would rise; the Canadian dollar would rise toward parity. Whether it would reach 100 cents on the American dollar, I honestly don't know. *I have some doubts.* It may come near it.
>
> * * * * * * *

Whether it would go to a hundred cents of American dollar or it would go to 95 or 97, it is hard to tell * * *

* * * * * * *

Or the other alternative, Mr. Examiner, would be to revalue its currency to $1 or 97.5 or whatever it would find as feasible for a period of time.

If I may just add one point, *governments as with anybody, find it awfully hard to set a rate of exchange which makes sense over a period of time because they have to judge a wide variety of factors.* They have to judge productivity; they have to judge competition in the international market; they have to judge what is in the minds of potential investors; they have to judge what is going to happen to imports as well as exports, so when one sits with government officials and tries to work out a rate of exchange decision, *it is torturous because there are so many factors that come into account, and it is awfully hard to value these.* (9: 1349–50)[4]

The situation may thus be summarized as follows:

1) The most Nathan would say is that in his judgment there would be a *tendency* for the Canadian dollar to return *toward par* within the next two years.

2) The fact is that as of the date of this decision (more than eight months after the above testimony) the Canadian dollar is *still* officially pegged at 92.5 cents.

3) If and when the Canadian government might elect to depart from its current official exchange rate of 92.5 cents, Nathan envisioned two possible alternatives: a) Canada might go off the official exchange rate, and in that case Nathan had "*some doubts*" whether the Canadian dollar would reach 100 cents on the dollar, although it would rise *toward* parity; or (b) the Canadian government might instead establish a new official exchange rate of $1 or 97.5 "or whatever it would find as feasible for a period of time."

4) Nathan's limited prediction that there would be a *tendency* for the Canadian dollar to return *toward par* within the next two years is based upon his analysis of the economic situation in Canada—upon his assumption that the Canadian employment situation will continue to improve at a satisfactory rate, that its balance of payments will continue to become stronger, that its accumulation of monetary reserves will continue to increase its money supply, that this will result in *continued* inflationary pressures, that the Canadian government under such circumstances will regard the avoidance of inflation as its *primary* objective, outweighing any other possible counterbalancing pressures.

5) If the Canadian government *were* to consider a possible change in its policy with respect to the exchange rate at some future time, this would be a difficult decision for that government to make because there are so many factors which must be considered "and it is awfully hard to value these."

6) Yet we are asked here to make *our own* evaluation of these factors, and to guess how *the Canadian government* would react to and evaluate them.

Under all the circumstances outlined above, it is concluded that a sound and fair regulatory policy here would be to compute Midwestern's purchased gas cost allowance in this proceeding on the basis of the continuing Canadian official exchange rate of 92.5 cents.

In the event that *a Canadian government policy change* with respect to the exchange rate *should* occur at some future date, with the result that there should be a significant and substantial rise of the exchange rate towards parity, under circumstances where it appeared that the determinative economic factors were such as to indicate a *continuing trend* in that direction, Midwestern *at*

[4] Emphasis in all above quotations supplied.

that time could consider whether, in the light of its entire prevailing cost and revenue picture, it would wish to file a rate increase application under Sec. 4. If it did, the purchased gas cost allowance would be reconsidered at that time in the light of the then prevailing situation with respect to the Canadian exchange rate.

At that time, and in such a proceeding, if the Canadian exchange rate had still not actually reached parity, but seemed to be headed in that direction, consideration might then be given to the technique here proposed by Midwestern in its intial brief (p. 31–32)—*i.e.*, that Midwestern's purchased gas cost from Trans-Canada would be computed on the basis of parity, subject to a condition (designed to avoid a possible windfall to the company) that Midwestern at the end of every six months period thereafter would refund to its customers their proportionate share of the amount, if any, by which the payments actually made to Trans-Canada during such period were less than those which would have been due had the exchange rate actually been at parity.

In view of the fact that as of this late date (more than eight months since the above testimony by witness Nathan) the Canadian dollar *still* remains pegged at the official exchange rate of 92.5 cents, it is concluded that the consideration at this time of any such device as that here proposed by Midwestern is premature and untimely. It is not irrelevant to note in this connection that since the Canadian government in May 1962 established its official exchange rate of 92.5 cents, there has been no downward revision of Midwestern's rates to reflect the resultant reduction in its purchased gas costs. The result is that the company has in fact been receiving a windfall running back to May 1962 (a period of almost two years up to the instant date)—and this is a windfall which the consumers cannot recoup, since in the instant Sec. 5(a) proceeding rates may only be fixed prospectively for the future. Under these circumstances, it seems not unreasonable to suggest that the possible risk and inconvenience envisioned by Midwestern as a result of the adoption of the instant position may in fairness be left with the company rather than the ratepayers.

B. *Amortization of Storage Development Project*

Midwestern proposes an upward adjustment in its test-year cost of service in the amount of $897,880, representing one-fifth of the maximum amount which it was authorized by the Commission to spend in the development of storage facilities in the Chicago area.[5] The company recognizes that if the project proves successful the total costs, estimated at $4,489,400, will be capitalized in its rate base. It alleges that return, taxes and depreciation on this amount would be approximately 20 percent per annum, which would produce roughly the same effect on cost of service as its instant proposed adjustment.

Under this adjustment Midwestern would commence the recovery of its estimated storage costs *now*, instead of following the usual practice of deferring such charges until the storage development operations were completed, either terminating in a successful project or in a determination of infeasibility.[6] Midwestern recognizes that the adoption of this adjustment would represent "special treatment" (initial brief, p. 33). The sole justification assigned for this proposed

---

[5] The project involves the testing of three storage fields in Illinois and Indiana adjacent to the Southern System line.

[6] This is despite the fact that in the event the project should be terminated as infeasible, the total expenditures up to any such date might conceivably be substantially less than the $4.4 million maximum figure. For example, Midwestern witness McGee indicated that the company would spend about $1 million on the storage project in 1963 rather than the $2.2 million originally estimated, because a decision was made to test only one of the three fields at this time. (9 : 1371)

departure from normal practice is its fear that in the event the project should turn out to be infeasible, these expenditures might not be allowed by the Commission in a subsequent rate proceeding, on the ground that they constituted a nonrecurring item. Midwestern contends that, in contrast to other companies, it needs "special protection" against any such possibility because it is "relatively small" and the failure of its storage development project would result in a substantial loss if it subsequently should encounter such Commission treatment.

On the face of it, the Midwestern proposal raises certain obvious and troublesome problems:

1) It seeks before-the-fact recovery—before the success or failure of the storage activities or the amount of expenses can be determined, and before additional sales are realized.

2) If the total costs of the project were instead capitalized, a successful project would be accompanied and offset by additional units of sales from the successful facilities, thus following the traditional principle of a proper matching of costs and revenues. Allowance of the proposed $897,880 annual adjustment now, when there are no offsetting sales, would violate this principle.

3) In the event the project should be terminated as infeasible, it is entirely possible that Midwestern might not have expended the entire estimated maximum amount of $4,489,400 by that time. Allowance of the proposed adjustment, which is based upon the entire estimated maximum amount, might thus conceivably result in collection from the ratepayers of sums in excess of the amount actually expended.

4) If the project were not terminated as infeasible, allowance of the proposed $897,880 adjustment could mean that Midwestern might conceivably continue to collect such amounts annually from the ratepayers until its next rate case, long after the maximum amount of $4,489,000 had been fully recovered.

5) Under the proposed adjustment, Midwestern's present customers would be required to pay for the storage facilities, although it is by no means certain that all of these particular customers will eventually benefit from such facilities should they prove successful. If the storage project should prove feasible and be put into service, it would seem that the customers who are then in a position to benefit from storage ought to pay its costs, and not the consumers of an earlier period.

6) A related problem arises from the fact that the nature of the storage service which will be offered by Midwestern in the event the project should be successful is not determined at this time. The additional peak capacity made available by storage could be used to render additional firm contract-demand service, or it could be used to render a special storage or winter service. If the latter alternative were authorized, the Commission might conceivably determine that only the customers who availed themselves of such special storage service should pay for it. Yet allowance of Midwestern's proposed adjustment, with its before-the-fact recovery from *all* customers, would frustrate any such determination.

7) Finally, since Midwestern will include these expenditures in its rate base, the proposed adjustment raises the possibility of a double recoupment unless some specific procedure were worked out to avoid any such result.

Midwestern recognizes that problems of this nature are inherent in its proposal. It emphasizes, however, that it does not seek a windfall but seeks only to protect itself against a possible loss in the event the project should prove infeasible; that accordingly it would be satisfied with any practical procedure providing the requisite protection both to itself and to its customers. In order to avoid some of the problems raised above, such as the possibility of double

recoupment, the failure to reflect offsetting sales, and the charging of present customers who may ultimately not benefit from the storage service, Midwestern suggests the adoption of a condition which would require it, in the event of a successful project, to do one of the following: (a) refund any amounts previously collected under the proposed adjustment, *or* (b) reduce its rate base by crediting to the depreciation reserve the amounts already recouped. With respect to the other problems outlined above, it suggests that any such possibilities could similarly be forestalled by adding some appropriate additional condition to the Commission's order.

The Staff correctly characterizes these recommended solutions as "awkward." It is true that some of these difficulties might be reduced under a condition requiring that in the event of a successful project the company would refund any amounts previously collected under the proposed adjustment—thus purportedly putting the parties back where they started.[7] However, this proposal in effect would require the company's present customers to play the role of lending agencies advancing the funds, interest free, for the storage project—despite the fact that they might conceivably wish to make some other use of their funds, and despite the further fact that they might not desire, be able or be allowed to use the storage facilities when they are finally developed.

In addition, it is to be borne in mind that the refund route is not necessarily an iron-clad protection to all customers, at all times, as emphasized by the U.S. Supreme Court in *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145 (1962). The Court there characterized the protection afforded consumers by the refund procedure as

> * * * somewhat illusory in view of the trickling down process necessary to be followed, the incidental cost of which is often borne by the consumer, and in view of the transient nature of our society which often prevents refunds from reaching those to whom they are due. (371 U.S. at 154–5)

Thus the effect of granting to Midwestern the "special treatment" and the "special protection" which it seeks here against any possibility of loss to itself, no matter how remote, would be simply to shift all risks to the consumers. In the face of these considerations, it is reasonable to ask what are the circumstances in this case which justify or require so substantial a departure from standard, normal regulatory and accounting practice. Does Midwestern in fact risk an unrecoverable loss by waiting to see what actually happens in the testing of its storage fields?

Midwestern describes its alleged problem as follows:

> Failure to permit Midwestern to recover its costs here may have the practical effect of precluding Midwestern from ever recovering these costs should the project prove to be infeasible. For, should the project turn out to be infeasible, there is a serious question whether the monies expended on the project would be allowed in a subsequent rate proceeding.
>
> Any attempt by Midwestern to recover these costs in such a proceeding might very well be met, as was Southern Natural Gas Company in its rate proceeding at Docket G–20509, by the claims of the Staff that these expenses constituted a non-recurring item and hence should not be allowed. (Initial brief, p. 33)

The salient fact about the *Southern Natural Gas Co.* case, however, is that the Commission in Op. No. 379, 29 FPC, *did* allow the storage development ex-

[7] The second device suggested would be even less satisfactory, in that it deals only with the problem of double recoupment.

pense item, on the ground that "the search for storage is an activity properly related to Southern's pipeline operations". In arriving at this position the Commission rejected a Staff contention that the item was non-recurring merely because Southern had transferred its storage development activities to a subsidiary. However, the language there used by the Commission in meeting an *ad hoc* argument by the Staff based upon the peculiar circumstances of that case, cannot be regarded as a policy determination that costs incurred in an unsuccessful search for storage, which the Commission characterized as "an activity properly related to * * * pipeline operations", may not subsequently be allowed as part of the company's jurisdictional cost-of-service in a later rate proceeding.

Midwestern's fear that in the event its instant storage project should prove infeasible it might later be confronted in a subsequent rate proceeding with a Staff contention that these expenses constituted a non-recurring item and hence should not be allowed, appears groundless in view of Staff's categorical assertions to the contrary in its instant initial brief, as follows:

> * * * Midwestern does *not* risk an unrecoverable loss by waiting to see what actually happens in the testing of the storage fields." (p. 9)
>
> * * * * * * *
>
> Mr. Walser's suggestion that the amortization expense might at that point be regarded as non-recurring * * * *is baseless.* (p. 13) [emphasis supplied.]

The Staff correctly points out, in this connection, that if Midwestern's own proposed adjustment is to be regarded as acceptable, even though it represents an allowance (on an amortized basis) for an expense which will not recur in the same form once this storage project is terminated, then there is no logical basis for suggesting that the same expenditure becomes non-recoverable merely because it is not charged until the total development operation is completed.

The doubt expressed by Midwestern would appear to be particularly groundless in view of the position taken by the Commission on a similar item in Op. No. 326, El Paso Natural Gas Co., 22 FPC 260, 264 (1959), as follows:

> With respect to the item "Other Gas Supply Expense" the presiding examiner accepted El Paso's figure which included the amount of $47,919, representing *an investment for gas supply made* with the Gresham-Hunter Corporation *in 1952, now determined unrecoverable. While this particular item is non-recurring, it represents the kind of expenditure which should be recognized in cost of service,* so that we shall accept El Paso's and the presiding examiner's total amount of $103,950, for Other Gas Supply Expenses. [Emphasis supplied.]

Any other position would appear to be inconsistent with the accounting treatment prescribed for such expenditures in Account No. 822 of the Commission's Uniform System of Accounts, which provides:

> This account shall include expenses of investigation, exploration, and development of underground storage projects under consideration *which prove not feasible.* [Emphasis supplied.]

Under these circumstances it is concluded that the risk to Midwestern is not such as to justify an adjustment representing so substantial a departure from standard, normal regulatory and accounting practice, where the interests of the ratepayers might conceivably be seriously prejudiced.

C. *Allocation of Indirect Administrative and General Expense*

Midwestern's parent, Tennessee, incurs certain indirect administrative and general (A&G) expenses which allegedly do not lend themselves to breakdown or direct charge to any particular division or subsidiary company. Such indirect expenses include the expenses of the Administrative, Corporate, Accounting-Corporate, Internal Audit, Industrial Relations, Legal, Office Service, Treasury, Public Relations and Advertising, Purchasing and Transportation, and Tax Departments of Tennessee. In determining what portion of such total indirect A&G expense should be assigned to Midwestern, the latter employs the so-called Massachusetts formula under which equal weight is given to each of three factors—labor, revenue and property. The Staff, however, contends that the allocation in this proceeding should be made on the basis of the single factor of labor alone. The dollar difference between these two approaches amounts to $191,810. (Exh. No. 25, Sch. 2, Col. 8)

In Tennessee's most recent rate proceeding at Docket G–19983, the Company similarly employed the Massachusetts formula for this allocation, and the Staff witness there concluded, subject to some modification of the mechanics of application, that the three-factor Massachusetts formula did produce a reasonable result in that case. However, Staff vigorously attacks the use of this approach in the instant proceeding.

In recommending continued adherence to the Massachusetts formula in the instant proceeding, Midwestern recognizes that this method does not achieve a perfect allocation of indirect A&G among the several divisions and subsidiaries of Tennessee, and that "probably no formula can be devised which can achieve such a result." However, it contends that the three-factor Massachusetts formula results in a more equitable and reasonable allocation than other possible methods, especially the single factor labor formula here espoused by Staff. In support of this position, Midwestern alleges that the use of the Massachusetts formula is particularly appropriate for an operation which is as complex and diverse as that of Tennessee; that when the companies among which the indirect A&G is to be allocated are dissimilar (as in the case of the Tennessee subsidiaries), the several factors have an impact which varies widely from company to company so that reliance upon only one factor results in a sharp tendency to produce distorted results; whereas the use of multiple factors serves to minimize such distortions.

The Staff, however, argues that there is no virtue in diversity of factors in and of itself; that each factor included in the average must have its own individual claim to validity as an index of the manner in which the joint A&G expenses are incurred; that a factor which is totally invalid as an index does not acquire some validity merely because it is averaged in with other factors. The Staff then attempts to demonstrate that the *revenue factor* is totally invalid as an index; that this is fatal to the usefulness of the Massachusetts formula in the instant case, because the dollar difference between Midwestern and Staff on this issue is almost entirely due to the alleged distortions which the *revenue factor* produces in the allocation of indirect A&G expenses among the three utility entities—Tennessee Pipeline, East Tennessee and Midwestern.

Staff's attack upon the validity of the revenue factor as an index centers upon the fact that the amount of gross revenues which a pipeline collects is dependent upon two factors which allegedly have nothing whatever to do with the incurrence of A&G expenses—*i.e.*, (1) the level of purchased-gas costs paid by the company (which constitutes a major portion of the pipeline company's total cost of service, and accordingly has a major impact upon the level of its rates), and (2) the capacity factor at which the company operates.

This Staff analysis, however, overlooks the critical distinction between the *nature of the expenses* which go to make up indirect A&G, and the *services performed in the incurrence of these expenses*. It is the *latter* which should be determinative in the allocation of indirect A&G, *not the former*. Although it is the salaries paid to officers and employees which in large measure give rise to the indirect A&G, these officers and employees typically devote their time and effort to matters relating to *revenue* and *property*, as well as to labor. The fallacy in the Staff analysis is that the relative level of gross revenues, *regardless of how it came about, does* have a bearing upon the extent of the services performed for a given company in the Tennessee system by personnel in such departments as the Treasury, Accounting and Tax Departments. For example, revenue clearly is of concern to the Treasury Department which must collect, manage and invest the gross revenues; to the Accounting Department which must account for it; and to the Tax Department which must prepare and file tax returns based on revenue. There can be no question but that the departments of Tennessee which are included in indirect A&G devote a substantial proportion of their time to the various aspects of the *revenue* problems of the Tennessee divisions and companies.

Thus, although it seems clear that the revenue factor, if applied alone, is subject to various defects and inadequacies, it does have validity in several pertinent respects. Accordingly, we cannot agree with the Staff conclusion that the revenue factor *per se* is so totally invalid as to fatally contaminate any method of allocation which in any way reflects that factor.

In arriving at its conclusion that it is the *labor* factor alone which successfully withstands critical examination, Staff relies upon the following purported rationale:

> When each entity uses its own separate staff for certain functions and uses the central organization for more specialized services, the relative amounts expended by the entities on their separate staffs are indicative of the portion of the costs of the central organization which is attributable to each particular entity. (Initial brief, p. 21–22)

Although this statement has an impressive sound upon a superficial reading, it actually goes no farther than to state a *conclusion*—to which the natural reaction would seem to be, "*Why?*" It completely overlooks the critical distinction, referred to above, that it is the nature of the services performed in the incurrence of particular A&G expenses which should be determinative in the allocation of such expenses. It seems obvious that certain types of services performed in the incurrence of particular A&G expenses would have no relationship whatsoever to, and would be totally unaffected by, the relative size of the payrolls of different entities for their own separate labor force.

Accordingly, just as it is possible to point to various defects and inadequacies applicable to the revenue factor if applied alone, cross-examination of Staff witness Blake made it clear that the labor factor, when used alone, also carries its share of blemishes, flaws and defects. Staff's confident conclusion that the labor factor "successfully withstands critical examination" is somewhat deflated by the concessions extracted from its own witness Blake during cross-examination as follows:

(1) When asked why the salary and other expenses of Tennessee's Legal Department are more closely related to direct labor of Midwestern than to such factors as revenue and property, Blake replied:

> * * * when you take such items as the legal department expense, it would require a very close analysis to determine whether the plant, the

revenue or the labor was the controlling factor. Now, certainly all three would contribute. As to which one on this particular department would govern, I do not know, and I could not tell without a thorough analysis of it. (5: 905)

(2) In response to a similar question with respect to the salaries and other expenses of Tennessee's Treasury Department, Blake replied:

Certainly on the treasury department it would be a very, very difficult thing to say. (5: 907)

(3) With respect to the Administrative Department, although he adhered to the view that this department was more concerned with labor than with property or revenue matters, he would not go so far as to say that the expenses of the Administrative Department had no relation to the revenue at all. Going even further, he agreed that in determining the allocation of A&G expense relating to an officer in that department whose functions were related largely to sales, "revenue would be a very strong factor." (5: 910)

In dealing with this issue, the most impressive and inescapable fact which emerges is that when an attempt is made to look separately at the different and varying types of A&G expense which must be allocated, a myriad of situations are encountered where no one can say with confidence that the services performed in the incurrence of such expenses are all related to one factor, or to another factor, or are more related to one factor than to another. Under these circumstances, it is difficult to see how the use of a single factor formula can be regarded as practicable or satisfactory.

The next effect of all the zealously controverted testimony and the heated and extended discussion of this issue in the briefs of both Staff and Midwestern appears to be that *none* of the methods considered is entirely satisfactory; that use of the revenue factor alone involves numerous flaws and defects, but use of the labor factor alone is subject to the same difficulty; and that those defects indentifiable in the use of any one factor alone are of course reflected in a method using all three factors (although to some extent the three-factor method does serve to minimize the distortions inherent in the use of a single factor).

Staff's initial brief accordingly concludes by asserting that no single indirect allocation factor or combination of such factors is capable of yielding entire satistion here; that Staff's long-range hope for a solution lies in the undertaking of more detailed studies which will indicate rational bases for the *direct* assignment of the great bulk of A&G costs; that because of this conclusion the Commission's Chief Accountant had invited officials of Midwestern to participate in a conference, scheduled for November 19, 1963, to discuss the entire problem, in an effort to see if it would be possible to develop sufficiently detailed information as to the manner in which A&G costs are actually incurred in the Tennessee system "to obviate the need for reliance upon arbitrary factors of any sort in future rate proceedings." (Initial brief, p. 29–30) Curiously, however, Staff's reply brief, filed December 27, 1963, makes no reference whatsoever to any such conference.

The total dollar amount ($191,810) represented by this particular issue in the instant proceeding actually is relatively minor as major rate cases go. The circumstances presented here do not justify a labored attempt to determine which one of the two admittedly "not entirely satisfactory" approaches should be given a "comparatively less *un*satisfactory" rating for the limited purposes of this case—while the search for a really useful and acceptable alternative goes on. Confronted with this type of situation, it is concluded that the commonsense and fair approach for the time being would be to continue to adhere to the

three-factor method (the Massachusetts formula) which the Staff itself was satisfied to use in the last Tennessee rate proceeding (G–19983)—until such time as the Staff's projected "more detailed studies" on this subject may produce a more useful solution. This would particularly appear to be acceptable as an interim solution in view of the fact, demonstrated by Midwestern's Exh. No. 26, that for the five years 1957 through 1961 Midwestern, using the Massachusetts formula, shows a *lower* relative A&G expense, under seven significant and basic tests, than the average for all other natural gas pipeline companies.

D. *Normalization of Labor Costs Charged to Operations and Maintenance*

During the test year Midwestern charged $1,066,336 to operations and maintenance as a current expense, and $157,042 was capitalized in the Construction Work in Progress Account. (4:685) Midwestern contends that with the construction of its pipeline system virtually completed, the $1,066,336 figure for labor charged to operations and maintenance is not representative of what may be expected in the future, and requires an upward adjustment. Although there is no disagreement between Midwestern and the staff that some adjustment is required, the amount of the adjustment is in dispute. Midwestern recommends an adjustment of $82,484, while Staff proposes $42,083—a difference of $40,401.

Staff's $42,083 adjustment is designed to reflect the *average increase* in expensed labor in a representative recent period following the close of the test year. Staff witness Parks, in rebuttal testimony distributed in June 1963, calculated the adjustment on the basis of the most recent data available at that time, covering the 10-month period following the test period—*i.e.*, July 1962 through April 1963. (4:685) The total dollar amounts for labor charged to operations for this period produced a monthly average of $91,600. Parks subtracted from this figure the comparable average monthly amount for the test year ending June 30, 1962, amounting to $88,861. The resulting difference of $2,739 represented the average increase in expensed labor during the 10-month period following the end of the test year. He multiplied this figure by 12 to obtain an annualized projection in the amount of $32,868. He finally added $10,000 to this figure "for good measure" (Staff initial brief, p. 15), to obtain his recommended adjustment in the amount of $42,083.

During Parks' cross-examination, Midwestern counsel supplied for the record the May 1963 figure for labor charged to operations, amounting to $94,309. (4:729) It is safe to assume that if the June 1963 figure were also available, and if the adjustment were therefore recalculated on the basis of the full 12 months following the test period, the result would still fall far short of the $42,083 adjustment here recommended by Staff.

By contrast, Midwestern witness Walser obtained his recommended adjustment of $82,484 by using only the first 5 months of 1963 (January through May). He annualized the 5 months' figures for labor charged to operations for that period, obtaining a total labor cost of $1,148,820. The difference between that figure and the $1,066,336 charged during the test period amounted to $82,484, which represents the adjustment here proposed by Midwestern. (7:1165)

The simple issue presented here is whether the instant adjustment should be derived on the basis of Midwestern's actual experience for the 10- or 12-month period immediately following the end of the test year, or whether it should instead be computed on the basis of the company's experience for the 5-month period of January through May 1963. The answer to this question hinges upon which of the two periods may be regarded as more reasonably representative of what Midwestern may be expected to experience in the future.

Midwestern contends that the 5-month period of January through May 1963 is more representative, because there has been since the beginning of 1963 a stabilization in the number of its employees, both generally and those engaged in operations; that, however, during the first part of the post-test-year period used by Staff, there were still significant variations in the number of employees, which one would expect in the shakedown of a new company. Staff, however, points out that a similar kind of stabilization has also occurred in past periods—*i.e.*, the corresponding 5 months of 1962.

Midwestern also calls attention (rebuttal brief, p. 44) to the fact that the Parks table shows that both in the test year and the 10-month period following, the average labor operation expenses for the months of November and December were well below the *monthly average* for those periods. The suggested implication seems to be that the November and December experience was abnormal and not representative, and that accordingly it is more appropriate to use the 5-month period of January through May, 1963. This Midwestern argument overlooks the inevitable and basic characteristics inherent in any calculation of averages, where it is to be expected that some of the constituent figures will be above the average level and some below. The fact that figures for other months of the year may fall below the average monthly figure of $96,000 derived for Midwestern's selected period of January through May 1963 does not establish that the experience for such other months is unrepresentative of what may be expected in future years *during the same seasons.* Rather, it suggests merely that Midwestern's selected 5-month period of January through May is not calculated to produce averages which are representative of what may be expected throughout an entire calendar year in the future.

This seems obvious upon an examination of the Parks table. (4:685) In both the test year and the 11-month period following the test year, the figures for the months of January, February and March were substantially higher than the figures for the remaining months in each of those periods.[8] The other months used by Midwestern, of April and May, similarly showed higher figures than the remaining months in both the test year and in the 11-month period following the test year, with the exception of the month of June in the test year and the month of October in the period following thereafter.

In view of the above, and under standard and accepted principles of ratemaking, it is concluded that our objective of obtaining a figure representative of what Midwestern may be expected to experience in the future will be served more effectively if our calculation is based upon the company's actual experience during the 10- or 12-month period following the end of the test year, than by reflecting only the figures for the selected 5-month period of January through May 1963. Accordingly, the Staff's proposed adjustment in the amount of $42,083 will be adopted here.

E. *Legal Fees and Salaries for Legal Services*

1. *Salary—T. G. Corcoran*

Staff proposes elimination from operating expenses of an item of $29,906, representing salary paid to Thomas Corcoran who is employed as Midwestern's General Attorney. The total information provided by Midwestern with respect to Mr. Corcoran's services during the test year consisted of the following:

1) In advance of the instant hearing Midwestern indicated, in response to a Staff request, that

> Mr. Corcoran was on the payroll of Midwestern as General Attorney during the year July 1, 1961, to June 30, 1962 (test period), and has been

[8] With the exception that the month of June was also a high month in the test year.

so employed through the year 1962 to date (September 20th). The legal matters which he handled were general in nature. He does not maintain an office in Chicago, Illinois (General Office of MGT). The time spent on MGT matters was eight hours daily, also he was serving other clients during the period July 1, 1961, to June 30, 1962. (1: 43–44)

2) The sole justification provided in the direct testimony of Midwestern witness Walser consisted of the following:

The salary payments to Mr. Corcoran, who is the General Attorney of Midwestern, are, like those to all other Midwestern employees, supported by Mr. Corcoran's signed time reports. (3: 438)

3) Efforts by Staff counsel, during cross-examination of witness Walser, to obtain some more useful information than the vague and general statements quoted above, produced the following:

Q. * * * Mr. Walser, does Midwestern maintain any records which reveal in detail the nature of the work performed by Mr. Corcoran?

A. Only what would be reflected on his time sheets as an employee of Midwestern which he submits in a similar manner to other employees of Midwestern.

Q. What do the time sheets reveal, Mr. Walser?

A. They reveal the hours he has spent from day to day through each time period, payroll time period devoted to general legal matters of Midwestern.

* * * * * * *

PRESIDING EXAMINER: Mr. Walser, when you stated a moment ago * * * that you have submitted to the staff Mr. Corcoran's signed time reports and that these time reports showed the hours of work devoted by Mr. Corcoran to legal matters for Midwestern, do those reports show in any way the nature of the legal matters on which Mr. Corcoran devoted his efforts for Midwestern?

The WITNESS: No. They show general attorney, his title, and the hours, which is similar to the same information furnished by all administrative employees of Midwestern. (7: 1121–2)

* * * * * * *

Q. Mr. Walser, what services in fact did Mr. Corcoran render to Midwestern during the test year that were useful to the utility business?

A. As I understand from discussing it with the President of the company * * * Mr. Corcoran has exercised general overall supervision of the company's attorneys, supervision of general legal matters involving Washington activities; he keeps Midwestern's officers and any other legal counterparts advised of regulatory developments in Washington that may be of concern to Midwestern or of possible concern to Midwestern, he has conferred regularly with the president of the company again on general legal matters as they may relate to Midwestern's operation.

Q. With whom did he confer during the test year in connection with your last statement?

A. I can't give you specifics as to whom or when. He has conferred, I know, from time to time with Mr. George Perrine, who is *now* president of the company, during the test period was attorney and consultant. (7: 1123–24) [Emphasis supplied.]

An identical issue with respect to legal fees paid to Mr. Corcoran arose in an earlier rate proceeding involving Midwestern's parent, Tennessee Gas Transmis-

sion Co., Docket No. G–5259. This Presiding Examiner there adopted the Staff's position that the company had failed adequately to meet the burden of explaining and supporting the nature and character of the services performed, and that the information provided was of such vague and general character that it was not possible to determine whether the charges were of the type which may properly be passed on to the ratepayers. (18 FPC 497–9) The discussion of this matter in the *Tennessee* decision, *supra*, is equally applicable here, and it is adopted for the purpose of the instant decision. The Examiner's conclusions on this issue in the *Tennessee* case were affirmed and adopted by the Commission on appeal. (18 FPC 435)

The information provided by Midwestern in the instant case with respect to the Corcoran fees, and the nature of the services to which they relate, plainly does not rise to the dignity of

> such detailed information as will permit ready identification, analysis, and verification of all facts relevant thereto. (Uniform System of Accounts, General Instructions, par. 2A, p. 3)

The mere fact that Mr. Corcoran is now listed as an "employee" of Midwestern on its Form 2 statement filed with the Commission (7: 1125)—as distinguished from the *Tennessee* case, *supra*, when he was listed as outside counsel—does not in any way change or diminish the responsibility of the company to provide such detailed information.

Here, as in the *Tennessee* case, Midwestern elected to confine its description of the services rendered to the vague and general explanation here provided. In choosing that course the company necessarily falls short of sustaining the burden of proof imposed on it under the Natural Gas Act. This can come as no surprise to the company, since in adhering to that course in the instant case Midwestern was fully aware that the identical course had resulted in a disallowance of similar charges in the earlier rate proceeding of its parent, Tennessee, involving the services of the same counsel.

2. *Retainer—Little, Presbrey and Ohse*

Staff also proposes to eliminate from operating expenses an item of $14,300, representing a legal retainer paid to the Illinois law firm of Little, Presbrey and Ohse, which is Midwestern's State Counsel for Illinois. Staff contends that the company's purported justification for this item reveals similar inadequacies to those dealt with above, and falls far short of satisfying the reasonable standard of "full information" established by the Uniform System of Accounts.

Midwestern contends that it has a very large investment in plant in Illinois, and that it is necessary that it retain competent counsel familiar with local law for advice and representation on legal problems which may arise in that State, and to keep it abreast of local matters which may affect its interests. The record shows that in addition to providing general legal advice to problems arising in Illinois, the firm of Little, Presbrey and Ohse provides advice as to the hiring of local counsel in the counties of Illinois where the company operates, and acts as the coordinator of legal work performed in various parts of the State on behalf of the company in connection with rights of way problems, damage claims, and opinions needed for local counsel in connection with financing. The firm is responsible for keeping Midwestern abreast of legislative and regulatory matters which may affect its interests, including matters before the Illinois Commerce Commission. Certain of these services were performed during the test period, and the record shows that Midwestern expects to continue to rely on this firm for such services. (1: 41–2; 3: 438–9; 7: 1133–5) Among other

things, Staff (initial brief, p. 7) questions the need for such a retainer on the ground that Midwestern does not pay similar retainers in other states, and on the further ground that the company employs other counsel than Little, Presbrey and Ohse in Illinois. However, Midwestern correctly notes that since it has a large investment in plant in Illinois, and is searching for underground storage in that state, it is not unreasonable for the company to expect continuing legal problems to arise in that state.

It is concluded that the information provided with respect to this modest charge is reasonably sufficient to satisfy Midwestern's burden of proof here; that the situation does not warrant further soul-searching or further questioning of the company's managerial discretion as to where counsel will be needed and what legal service will be required. Accordingly, the $14,300 legal retainer paid to the firm of Little, Presbrey and Ohse will be allowed as a proper operating expense.

There remains to be considered the question whether in computing Midwestern's Federal income tax allowance a deduction should be made for the $29,906 Corcoran legal salary item which is here disallowed as an operating expense. Staff contends that disallowed legal fees and salaries *should* nevertheless be reflected as income tax deductions, under the basic principle that the income tax allowance may not exceed actual tax liability.

The effect of disallowing the Corcoran legal salary item as an operating expense is that the stockholders of Midwestern, rather than the ratepayers, will be required to bear the entire burden of this particular expenditure. Under the circumstances, it is concluded that equity requires that the tax saving inuring to the company by use of this deduction on its tax return should be retained for the benefit of the investors.

As pointed out in Midwestern's reply brief (p. 48–49), a number of State regulatory commissions have adopted this principle in cases where charitable contributions were excluded from the cost of service, holding that under such circumstances equity required crediting the tax deductions for such charitable contributions to the investors. *Manufacturers Light & Heat Co.*, 34 PUR 3d 132, 142 (W. Va. PSC 1960); *Hope Natural Gas Co.*, 33 PUR 3d 335, 340 (W. Va. PSC 1960); *Pub. Util. Com'n.* v. *Bell Telephone Co.*, 16 PUR 3d 207, 256–7 (Pa. PUC 1957); *Mich. Consol. Gas Co.*, 5 PUR 3d 449, 462, 463–4 (Mich. PSC 1954). The same principle is applicable here. Accordingly, the disallowed Corcoran legal salary item will not be reflected as a tax deduction in computing Midwestern's income tax allowance.

II. Depreciation Rate

In Midwestern's original certificate proceedings (Docket No. G–16841, *et al.*, Op. No. 320, and Docket No. G–18313, *et al.*, Op. No. 331) the company proposed initial rates reflecting a 3.5% depreciation rate for both its Southern and Northern System transmission properties, and it has booked depreciation at that rate since the inception of service on both systems. In the instant proceeding, however, Midwestern contends that a proper and reasonable depreciation rate for its Southern System would be 3.6 percent, and for its Northern System would be 4 percent. Staff, on the other hand, recommends the adoption of a 3.125 percent depreciation rate on Midwestern's transmission properties, for both systems. The difference between these conflicting approaches amounts to $594,460, on an annual basis.

A. *Midwestern's Southern System*

In the last rate proceeding involving Midwestern's parent, Tennessee Gas Transmission Company, Docket No. G–19983, it was agreed and concluded that in a depreciation rate determination the controlling factor affecting the service life of the company's transmission properties was the exhaustion of gas reserves, that this would occur prior to the end of the physical life of the properties, and

that accordingly the remaining economic life of the system should be used as the basis for determining the depreciation rate. The same principles are controlling here.

Midwestern contends that the remaining life of its Southern System is dependent upon Tennessee's remaining life, since Tennessee is Midwestern's sole supplier on the Southern System. Both Midwestern and the Staff are in agreement that in one way or another the facts with respect to Tennessee are of crucial importance in determining the depreciation rate for Midwestern's Southern System. However, they are in sharp disagreement as to how and to what extent the Tennessee experience is to be used here.

In the last Tennessee rate proceeding (G–19983) an initial decision issued by this Presiding Examiner (May 28, 1962) approved a depreciation rate of 3.12 percent for Tennessee's transmission plant, based upon an assumed 30-year remaining life from December 31, 1956. In a subsequent general rate settlement, approved by Commission order of December 21, 1962, Tennessee accepted this 3.12 percent depreciation rate and has booked depreciation on all its transmission properties at that rate since that time.

In the instant case Midwestern witness Davis, using as his point of departure the same 30-year remaining life from December 1956 which was the basis for the 3.12 percent depreciation rate determination in Tennessee's Docket No. G–19983, derived a 26-year remaining life for Tennessee from December 31, 1962, by virtue of reflecting all recent plant additions in the total Tennessee depreciable plant to be recovered. He calculated that if the same remaining life of 26 years as of December 31, 1962, were to be used for the Midwestern Southern System transmission properties, a depreciation rate of approximately 3.6 percent per annum would be necessary to recover the undepreciated depreciable plant on that System (3:500; Exh. 28, Sch. 8). Davis accordingly concluded that a 3.6 percent depreciation rate is justified for Midwestern's Southern System transmission properties.

The Staff, however, approaches the problem in an entirely different manner. The heart of the Staff position is that Midwestern should be required to depreciate its Southern System transmission property at the same 3.12 percent rate fixed for Tennessee, as if Midwestern were operated as a part of the Tennessee system rather than through a separate corporation—on the theory that

> Unless compelling reasons can be shown, we oppose any rate advantage to Midwestern which arises from the fact that its service is being rendered by a separate corporation rather than by Tennessee Gas Transmission Company itself.

The Staff notes that Tennessee has made vast amounts of *new plant additions* since 1957; that in 1959 alone, the year in which Midwestern's Southern System was constructed, Tennessee made transmission plant additions which far exceeded in cost the entire transmission plant which Midwestern eventually constructed; that the agreed depreciation rate of 3.12 percent which was adopted for Tennessee in its December 1962 rate settlement is applicable to and has been used by Tennessee for all its transmission properties, including such new plant additions; that accordingly if the present Midwestern transmission facilities had been operated as part of the Tennessee system in 1962, rather than through a separate corporation, they would have been included within the mass of Tennessee property to be depreciated at the 3.12 percent rate and would still be subject to that rate today. In this connection, Staff notes that by definition the "remaining life" of each Tennessee unit of plant addition at the moment of introduction into the plant accounts is about 30 years (*i.e.*, 100 percent of the cost, divided by the 3.12 percent depreciation rate);[9] that accordingly it would take until the year 1992 to recover the full cost of a 1962 plant addition at the same 3.12 percent depreciation rate. The inference left is that under these circumstances Tennessee's willingness to "go along" with the same 3.12

[9] The figure of 30 years, rather than 32 years, results from the reflection of 0.2 percent for interim retirements.

percent depreciation rate for its new plant additions renders obsolete and meaningless the original assumption of a 30-year remaining life *from 1956*, running to the end of 1986, upon which the established 3.12 percent depreciation rate was founded. In this same connection, Staff notes that neither Tennessee nor Midwestern have claimed any changed circumstances rendering the 3.12 percent depreciation rate inappropriate for Tennessee, nor have they urged a reevaluation of the 3.12 percent rate.

It is concluded, however, that the Staff argument assumes too much. Midwestern's Southern System actually did not commence operation until the latter part of 1959, subsequent to the end of the test year used in Tennessee's G–19983 rate proceeding. If it had in fact been in operation during that test year, and if a proposal had been made in the Tennessee G–19983 proceeding to include and reflect the Midwestern system in that depreciation rate determination, serious objections would have been raised on the ground that Midwestern was a separate system serving a separate market area, that if Midwestern's newer plant were rolled-in with the Tennessee plant in determining the depreciation rate the result would inevitably have been a still higher depreciation rate, and that it would have been unfair to impose this upon Tennessee's customers who were in no way served by the Midwestern plant. If under such hypothetical circumstances the Midwestern facilities had nevertheless been treated as if they were a part of the Tennessee system, being rolled-in with the Tennessee plant in determining the depreciation rate, it seems axiomatic that a higher depreciation rate than 3.12 percent would have been derived for the combined Tennessee and Midwestern plants, by virtue of the addition of Midwestern's new and undepreciated plant to the total plant to be depreciated over the assumed 30-year remaining life period.

Similarly, Staff's argument based upon Tennessee's willingness to "go along" with the same 3.12 percent depreciation rate for its new plant additions assumes too much. Under the terms of Tennessee's G–19983 rate settlement the company agreed to make no rate increase filings prior to January 1, 1964. Subsequent to the expiration of this moratorium, there are many possible considerations which might impel the company not to seek a reopening of the depreciation rate question, despite substantial new plant additions since the last determination. As the Commission has said on numerous occasions, there is a value in rate stability—and the public interest would not be served by the reopening and relitigating of the company's depreciation rate level upon every occasion when there was a change in the factors or conditions underlying the original determination. Yet if the Staff's rationale were adopted here, Tennessee's failure to seek an adjustment of its previously determined 3.12 percent depreciation rate upon the acquisition of substantial new plant would be converted into a confession of weakness, militating against Midwestern's right to have its own depreciation rate considered upon the merits. Such an approach would not appear to be conducive to rate stability.

In considering the appropriate depreciation rate for Midwestern's Southern System transmission properties upon its own merits, we agree with Midwestern witness Davis' starting assumption that the remaining life of Midwestern's Southern System is dependent upon Tennessee's remaining life, since Tennessee is Midwestern's sole supplier on the Southern System "and presumably will be the sole supplier for many years down the road." (9: 1356–8) In Tennessee's G–19983 rate proceeding the company contended that its remaining life should be determined rigidly on the basis of the then existing reserve-life index of the acreage under contract to it, amounting to 24 years from December 1956, and this was the basis for its claimed 3.5 percent depreciation rate in that proceeding.

However, in the initial decision rendered in that case (May 28, 1962) this Presiding Examiner rejected the use of the strict reserve life index for that purpose, and instead rested his determination of Tennessee's remaining life upon the best available estimate of the probable duration of gas supply, including projected future discoveries, in the general producing areas to which the Tennessee pipeline would have access—as urged by the Staff. Despite testimony by a Staff witness in that proceeding estimating that the volumes of gas to be discovered would be sufficient to keep Tennessee's existing transmission system in operation to the year 2010, and that the company in any event had a remaining economic life in excess of 50 years, the Staff there concluded that any such prediction as to the company's future gas acquisitions must of necessity be speculative. The Staff accordingly recommended, as a matter of "judgment," that a "quite conservative period of 30 years" should be used to depreciate Tennessee's transmission properties, and proposed adoption of a 3.12 percent depreciation rate on that basis.[10] The Presiding Examiner's initial decision adopted this Staff position in approving the 3.12 percent depreciation rate, which later was incorporated in the Tennessee settlement.

It is important to note here that Staff does not contend in the instant Midwestern case that the 30-year remaining life estimate for the Tennessee system (from and after December 1956), which it regarded as appropriate for the purpose of the 3.12 percent depreciation rate determination in Tennessee's G-19983 proceeding, requires revision or adjustment at this time, or that it should be reopened and reexamined in this case. Accordingly, no evidence whatsoever was presented by any of the parties on this question in the instant hearing. Under these circumstances it is concluded that it would be inappropriate, on the record made in this case to treat the 30-year remaining life determination which was adopted in Tennessee's G-19983 proceeding as a matter lightly to be ignored, to be replaced by an assumption (totally without record support) that if Tennessee's depreciation rate were to be redetermined today it would be held that Tennessee's remaining life was still 30 years or longer, running from the instant date.

It is accordingly concluded that Midwestern witness Davis correctly computed the depreciation rate for its Southern System on the basis of a 26-year remaining life for Tennessee's transmission properties as of December 31, 1962. On this basis, and by strict mathematical computation, Davis found that a depreciation rate of approximately 3.63 percent was required, and he accordingly concluded that a 3.6 percent depreciation rate was justified for Midwestern's Southern System. This rigid mathematical calculation, however, overlooks certain equally relevant factors—*i.e.*, the fact that the 30-year remaining life estimate employed for Tennessee in Docket No. G–19983 was recognized as a "very conservative" estimate, the fact that Midwestern witness Davis in deriving his 3.6 percent figure reflected no salvage value at all for the Midwestern plant, and the fact that Midwestern itself has booked depreciation for its Southern System at a 3.5 percent rate since its inception. Giving weight to these considerations, it is here concluded that the depreciation allowance for Midwestern's Southern System in the instant cost of service should be computed on the basis of a 3.5 percent depreciation rate.

The use of a 3.5 percent depreciation rate for Midwestern, as compared with Tennessee's 3.12 percent rate, is not surprising in view of the fact that the average age of the Tennessee plant is 8.65 years, as compared to 3.14 years for Midwestern. It is understandable that where the average age is substantially different as be-

[10] See initial decision in *Tennessee Gas Transmission Company*, Docket No. G–19983, May 28, 1962, at mimeo. pages 86–87. [Unreported]

tween two companies, the depreciation rates will be different in order to depreciate the properties over the same remaining life (all other factors remaining equal).

B. *Midwestern's Northern System*

The Staff recognizes that the determination of a depreciation rate for Midwestern's Northern System requires a consideration of different factors, since "the utility of Midwestern's Northern System is dependent upon the continued flow of gas from Canada." (Initial brief, p. 43) Under these circumstances any estimate as to the remaining life of Midwestern's Northern System must depend upon the assumptions which are to be made concerning the duration of Canadian natural gas supplies.

Midwestern purchases gas for its Northern System from Trans-Canada Pipe Lines, Ltd., under a contract which expires December 15, 1985. Trans-Canada, in turn, holds an export license from the National Energy Board of Canada which expires May 14, 1981. Since Trans-Canada is not subject to the Commission's jurisdiction, it is agreed that Trans-Canada would not require any Sec. 7(b) authorization from this Commission in order to discontinue deliveries to Midwestern at the end of the contract term. It is further agreed that continuation of deliveries by Trans-Canada after May 1981 would be dependent upon an extension of the export license granted by the Canadian National Energy Board; and that such an extension cannot be granted under the Canadian law unless the gas to be exported is shown to be surplus above reasonable foreseeable Canadian needs, taking account of the trend of Canadian discoveries.[11]

Midwestern witness Davis concluded that it was reasonable to assume that Trans-Canada's export license will be extended 4 years to 1985 in order to permit that company to live up to its contractual obligations to Midwestern. Beyond that, however, he emphasized that no one can know what the Canadian gas supply picture will be in 1985; that presumably, if there should be more than enough Canadian gas to meet Canadian requirements at that time, gas would continue to be exported; that on the other hand, if there were not a sufficient surplus above Canadian requirements in 1985, it is reasonable to expect that the export of gas to the United States might not continue to be authorized beyond that date. Under these circumstances, Midwestern contends that the depreciation rate for its Northern System should not be based upon a speculative assumption that deliveries will continue to be made to it by Trans-Canada for a number of years beyond the contract term, but rather that the determination should be made on the basis of the more conservative assumption that deliveries by Trans-Canada will not be continued beyond the present contract term of 25 years, subject to later adjustment if, at some future date, more firm assurance is provided of continued deliveries. On this basis, Midwestern concludes that the appropriate depreciation rate to be fixed for its Northern System at this time, based on the 25-year contract term, is 4 percent.

Staff, however, contends that circumstances at the present time do not warrant determination of Midwestern's Northern System depreciation rate on the basis of so pessimistic an assumption as to the duration of the Canadian supply. In the Staff's view the only real question to be resolved here is whether it is reasonably to be expected that at the time when an extension of the Canadian export license may be sought there will be available sufficient "surplus" gas—*i.e.*, gas not needed for reasonably foreseeable Canadian uses after taking account of the trend in Canadian discoveries. Staff argues that in considering this

[11] National Energy Board Act, 1959, Sec. 83; Staff initial brief, p. 43–44.

question it would be a mistake for the Commission to close its eyes to the information which is now available and which strongly indicates where the probabilities lie.

In this connection, Staff calls attention to certain findings with respect to Canadian gas supply and requirements as set forth in the Canadian National Energy Board Report to the Governor in Council, filed March 1960, on applications by Trans-Canada and other Canadian companies for licenses to export natural gas to various areas of the United States. The National Energy Board Report concluded that there was a surplus of 9.3 trillion cubic feet of established reserves above the *then* Canadian requirements (Sec. 12, pp. 3 and 7), and that there was "a surplus of some 46 trillion cubic feet estimated *for 1989* having regard to the trends in discovery of gas in Canada." (Sec. 4, p. 12–13; Sec. 12, p. 7) [Emphasis supplied.]

While taking cognizance of these findings by the Canadian National Energy Board, Midwestern in its initial brief contends that the Board estimate of a surplus of 46 trillion cubic feet in 1989 related merely to "the Canadian requirements at the time the application was being considered" and that the Board did not consider whether there would be a sufficient surplus of gas above *future* Canadian requirements as of 1989. (Initial brief, p. 21–22) Midwestern is clearly in error here. The Board's estimate of a surplus of 46 trillion cubic feet in 1989 was characterized as "in excess of *future* Canadian requirements." (Sec. 4, p. 13) It was based upon an estimate of Canadian demand for gas over the 30-year period 1960 to 1989, amounting to some 30.3 trillion cubic feet, which in turn was calculated on the basis of an annual demand expected to rise from approximately 365 billion cubic feet in 1960 to approximately 1.6 trillion cubic feet in 1989. (Sec. 2, p. 4; Sec. 12, p. 1; Table 1)

Midwestern further contends that the Board found:

> that Trans-Canada's estimated deliverable reserves were less than needed to meet its full estimated requirements and indicated that there would be significant shortages beginning with 1976. (Initial brief, p. 22)

These alleged shortages are characterized as "significant shortages in deliverability both on a peak and annual basis beginning in 1976." (Reply brief, p. 21)

The language found in the Board's report, however, has a somewhat different flavor. In referring to Trans-Canada's own estimate of deliverable gas from its established reserves the Board stated:

> This would provide for contracted and non-contracted but anticipated sales of some 6,769 billion cubic feet with no significant shortages in either peak day or annual volumes until 1976. The total estimated shortage is 255 billion cubic feet or 3.8 per cent. (Sec. 5, p. 6)

On the next page of the report, however, the Board expressed the following conclusion:

> The Board believes that Canadian requirements are fully protected and that Trans-Canada will be able to purchase additional gas from the presently non-contracted reserves referred to and from new discoveries which should cover amply the estimated shortage of 255 billion cubic feet and the increments in demand after 1962–63. (Sec. 5, p. 7)

As noted at the beginning of this discussion, Trans-Canada's export license from the National Energy Board of Canada runs only to May 14, 1981. As pointed out in the Board's report (Sec. 5, p. 18), Trans-Canada's application was limited to this period since May 14, 1981 was the terminal date set forth in the permits previously issued to Trans-Canada by the Oil and Gas Conser-

vation Board of the Province of Alberta. However, Staff calls attention to the fact that in August, 1963 (subsequent to completion of the instant hearing on the cost-of-service issues) Trans-Canada filed with the Alberta Oil and Gas Conservation Board an application to extend all of its existing export permits from the present termination dates to 1989. (Initial brief, p. 46) Administrative notice may properly be taken of this development. We agree with the Staff's suggestion that there could be no serious question as to Trans-Canada's motivation to extend the sale to Midwestern upon the termination of their present contract. Thus it appears likely that in the event Trans-Canada's current application to the Alberta Board should be granted, Trans-Canada would be in a position to apply for an extension of its National Energy Board export license to 1989. We agree with the Staff's suggestion that under such circumstances there is little reason to doubt that such an extension would be granted, in the absence of an extraordinarily drastic change in the trends of either Canadian consumption or Canadian discoveries since 1960.

In view of all the circumstances set forth above, it is concluded that the depreciation rate for Midwestern's Northern System should be determined on the basis of a remaining life running to 1989, or 27 years from December 31, 1962. On the basis of such an assumption, the Staff recommends adoption of a 3.125 percent depreciation rate, but without any indication as to how such a figure is derived from a 27-year remaining life. A calculation based upon data set forth in Midwestern's Exh. 28 indicates that on the basis of a strict mathematical computation a depreciation rate of approximately 3.6 percent would be required to recover the undepreciated depreciable plant on Midwestern's Northern System on the basis of an assumed 27-year remaining life. However, certain other relevant factors should be considered here—*i.e.*, the fact that such a 3.6 percent calculation reflects no salvage value at all for the Midwestern plant, the fact that Midwestern itself has booked depreciation for its Northern System at a 3.5 percent rate since its inception, and the further fact that Midwestern itself has booked depreciation *at the same rate* of 3.5 percent for *both* its Northern and Southern Systems from the commencement of operations. Giving weight to these considerations, it is here concluded that the depreciation allowance for Midwestern's Northern System in the instant cost of service should be computed on the basis of the same 3.5 percent depreciation rate already approved herein for its Southern System.

The net result of here adopting a 3.5 percent depreciation rate for Midwestern's Northern and Southern System transmission properties is to produce a total depreciation expense allowance (including amortization) of $3,086,053—$264,733 less than Midwestern's proposed allowance, but $329,727 more than the Staff's proposal.

III. Working Capital

Staff has calculated a total gross working capital allowance of $452,604 (Exh. 55, Sch. 4), including allowances for working capital required for 45-days operating expenses, materials and supplies, and prepayments. Staff, however, does not include any allowance for gas purchase lag or minimum bank balances.

Midwestern originally claimed a total gross working capital allowance of $2,311,535. (Exh. 25, Sch. 7.2) This included $1,000,000 for average minimum bank balances. However, Midwestern now withdraws its request for a separate allowance for minimum bank balances, in view of its recognition (as pointed out by Staff) that the need for any such separate allowance is offset by *ad*

valorem tax accruals which are available in the average amount of $845,965. (Midwestern initial brief, pp. 4–5) [12]

Accordingly, Midwestern presently claims a total gross working capital allowance of $1,311,535. This includes $689,976 for a claimed lag associated with purchased gas costs, disputed by Staff. The remaining $621,559 of Midwestern's presently claimed gross working capital allowance exceeds the Staff's figure by $168,955. This $168,955 difference results not from any disagreement in principle between Midwestern and Staff on the theory of computing the working capital allowance, but from the fact that Staff has disallowed certain operating expenses claimed by Midwestern, thus producing a different computation of working capital required for 45-days operating expenses.

It thus appears that the only controverted issue of principle now presented with respect to the working capital allowance lies in Midwestern's claimed allowance of $689,976 for the lag associated with purchased gas costs.

As noted above, Midwestern claims a $689,976 gas purchase lag allowance, covering an alleged 5-day lag between its payments to its suppliers (Trans-Canada on the Northern System, and Tennessee on the Southern System) for purchased gas and its collections from its customers for the gas sold to them. Midwestern contends that it is required to pay its gas suppliers on or before the 25th of each month, under its contracts with them; that its contracts with its own customers also provide for payment by them to Midwestern by the 25th of each month, but that the Midwestern tariff provides that monthly payments "shall be considered as duly delivered when mailed by either registered or ordinary mail"; that since the customers' obligation is thus satisfied by depositing the check in the mail by the 25th, there is bound to be a lag until the check is actually received by Midwestern; that there is actually a lag of about 5 days between Midwestern's receipt of payment from its customers and its payment to its suppliers; that to make up for this lag, Midwestern needs the claimed allowance of $689,976, representing 5/365 of its total annual gas purchase expense, in order to avoid being placed in a position where it would have to write checks without yet having the covering funds on deposit in the bank.

Midwestern's allegation with respect to the existence of a 5-day gas purchase lag, as outlined above, presents a disputed question of fact which must be resolved here by an examination of the evidence. The evidence contained in the instant record with respect to the alleged lag relating to Midwestern's Southern System, accounting for $456,083 out of the total claimed allowance of $689,976, is quite different from that presented with respect to the Northern System, and the two must be considered separately.

1. *The Southern System*

Midwestern purchases gas for its Southern System from its parent, Tennessee, under Tennessee's FPC Gas Tariff, Eighth Revised Vol. No. 1. Although under Art. VI of the Tennessee Tariff payments for purchased gas are required to be made on or before the 25th of the month, Art. XI provides that payments shall be considered as duly delivered *when mailed* by either registered or ordinary mail.

However, as a matter of actual practice, Exh. 56 [13] shows that during the 17-month period from May 1961 to September 1962, Midwestern made no monthly payments to Tennessee for purchased gas on the 25th of the month or earlier;

---

[12] Under the circumstances, there is no need to consider here the merits of Midwestern's original claim for a separate minimum bank balance allowance.

[13] A work paper of Staff's working capital allowance witness Parks, representing data taken from the books and records of Midwestern. (4 : 749)

that instead Midwestern wrote its checks to Tennessee as follows: 3 months on the 26th, 7 months on the 27th, 3 months on the 28th, 3 months on the 29th, and 1 month on the 30th.[14] With respect to payments *to Midwestern* from its three customer companies, Exh. 56 shows that out of a combined total of 48 monthly payments during the 16-month period from June 1961 to September 1962, only 3 payments were actually received by Midwestern later than the 27th of the month. Payments from Northern Illinois Gas Company were received as follows: 1 on the 24th of the month, 4 on the 25th, 10 on the 26th, and 1 on the 27th. Payments from Northern Indiana Public Service Co. were received—1 on the 23d, 1 on the 24th, 3 on the 25th, 6 on the 26th, 4 on the 27th, and 1 on the 28th. Payments from Peoples Gas Light and Coke Co. were received—12 on the 26th, 2 on the 27th, 1 on the 28th, and 1 on the 30th.

It thus appears that Midwestern's common, standard practice has been to writes its checks to Tennessee in payment for purchased gas *on the 27th of the month, or later.* By contrast, as a matter of common practice Midwestern *receives payment* from its customers *on the 26th of the month or earlier.*[15] Under these circumstances, it seems clear that if Midwestern merely continues its previous common practice in making its purchased gas payments to Tennessee, it would have no gas purchase lag on its Southern System, since Midwestern actually receives its payments from the three customer companies in plenty of time to write its check to Tennessee by the 27th of each month. It is relevant to note, in this connection, that Midwestern makes no contention here that its previous common, standard practice in making payment for gas purchases to its parent company, Tennessee, needs to be changed.

Under the circumstances set forth above, it is concluded that the evidence here presented does not establish the existence of an actual gas purchase lag problem on Midwestern's Southern System. Accordingly, Midwestern's claimed allowance of $456,083 for an alleged lag associated with purchased gas costs on its Southern System is denied.

2. *The Northern System*

Midwestern purchases gas for its Northern System from Trans-Canada under a contract which provides that payments are to be made on or before the 25th of each month, and that:

> All payments under this contract shall be made to the First National City Bank of New York, New York, in United States dollars in an amount being the then equivalent of the amount so billed in lawful money of Canada. (Art. IX of Exh. 30, p. 7)

Payments to Midwestern by its Northern System customers are made at the Northwestern National Bank in Minneapolis. (9: 1380) Midwestern contends that even if the Minneapolis Bank *received* the checks from Midwestern's customers by the 25th of the month, considerable time is necessarily consumed in the normal processes of converting these funds into payments to Trans-Canada, in such a way as to meet the above requirement of the Trans-Canada contract. Midwestern's working capital allowance witness McGee, the company's chief financial officer, testified that if Midwestern had no working capital associated with purchased gas costs, the company in order to make the Trans-Canada pay-

---

[14] Midwestern witness McGee explained that on the last two sheets of Exh. 56, relating to the Southern System, in the 5th column the second date in each entry represented "the date that Midwestern wrote the check to Tennessee." (9: 1396)

[15] The only exception being that out of a total of 48 monthly payments during the period covered by Exh. 56, 7 payments were received on the 27th of the month, and 3 on the 28th or 30th.

ments on time would have to receive the payments from its customers at least 5 days prior to the 25th of the month. In reaching this conclusion, he testified that two days are required to transfer such customer payments from the collection point to the First National City Bank in New York. He assumed that, as a matter of good business practice, Midwestern would not mail its own check to the New York bank until the necessary funds, obtained from customer collections, had been deposited there, and that thereafter 3 days would have to be allowed for this last step. (3:553)

It is concluded that there is substantial merit in Midwestern's contention that it would not be in a position to satisfy the above quoted requirement of the Trans-Canada contract at any time before the customer collections were actually received and deposited in the First National City Bank of New York. Staff, however, suggests that this contractual provision would be satisfied if Midwestern on the 25th of the month delivered to the First National Bank of New York its check *on any other bank* where Midwestern had sufficient funds on deposit, including a Houston, Chicago or Minneapolis bank. In response to this suggestion, advanced during cross-examination, Midwestern witness McGee testified that the company normally pays Trans-Canada by checks drawn on the First National City Bank of New York; that the Midwestern check, delivered on or before the 25th of the month, must be made payable to that bank "and the funds have to be good in New York that day if the check is to be good"; that if the check were drawn on any bank other than the First National City Bank of New York, a still further lag would have to be provided to permit such a check to clear so that the New York bank would have "good funds" in New York on the 25th. He further testified that:

> * * * they must be funds that they can put their hands on right that minute. They don't have to wait two or three days to see whether the check is good enough.
>
> In other words, they might want to use that money that day themselves. * * *
>
> * * * * * * *
>
> A. * * * No sir, I would not say that. If you give a check to the First National City Bank in New York drawn on a Chicago bank the day on which the check is to be paid in New York, you have not paid your bill. (9:1374–8)

Actually, the evidence here establishes that as a matter of common practice the bulk of the customer payments to Midwestern on the Northern System *are not received at the collection point by the 25th of the month.* Exhibit 56 shows that payments to Midwestern from Michigan Wisconsin, which is by far the largest purchaser of gas from Midwestern on the Northern System, are commonly received on the 26th and 27th of the month, and in some cases even later. During the 23-month period from November 1960 to September 1962, payments from Michigan Wisconsin were received by Midwestern as follows—5 on the 25th of the month, 8 on the 26th, 8 on the 27th, 1 on the 28th, and 1 on the 29th. Since approximately two-thirds of the customer payments from Michigan Wisconsin are thus received by Midwestern on the 26th and 27th of the month, and assuming (as seems reasonable) that 2 days are required after collection to transfer such funds to the First National City Bank of New York, it follows that a substantial part of the customer payments would not be deposited in the New York bank until the 28th or the 29th of the month.

As a suggestion to reduce the lag involved here, Staff contends that there is no reason why Midwestern could not mail its check in payment for the Trans-Canada gas to a New York agent in advance of the date when the customer

funds were to arrive at the First National City Bank of New York, with instructions to present the check at the New York bank after the customer payments had been deposited there. However, even if some such procedure were adopted, customer payments received by Midwestern in Minneapolis on the 26th and 27th of the month could not be deposited in Midwestern's account in the First National City Bank of New York earlier than the 28th and 29th of the month, unless Midwestern were to adopt still another Staff suggestion—*i.e.*, that payment should be accomplished by the *telegraphic transfer* of funds from one bank to another, rather than by the more conventional practice of mailing checks.

It should first be noted that even if Midwestern were to adopt this Staff suggestion, the necessary funds still would not arrive on deposit in the New York bank prior to the 26th and the 27th of the month. There would thus be a 1- or 2-day lag in any event, even under the most optimistic assumptions based upon the Staff proposal. However, in addition, Midwestern contends that the adoption, as a matter of routine practice, of a procedure under which a pipeline company's payments for gas purchases would be made *by telegraphic transfer* of funds from one bank to another is virtually unheard of in the natural gas industry; that for purposes of control, to provide permanent records of payment, and to minimize the possibilities of error, it is better business practice for a pipeline company to make payments of such magnitude by check rather than by wire as a routine regular matter. Staff witness Parks, when asked whether he knew of any practice in the natural gas industry whereby payments for gas purchases by a pipeline company to its supplier are made routinely by the telegraphic transfer of funds, replied:

> I do not know of any specific instances. However, that would not *preclude* any company from doing that sort of thing any and every day. (4:704). [Emphasis supplied.]

Midwestern witness McGee, when asked whether it was *possible* to transfer funds from a bank in one city to another bank in another city by wire, stated:

> Yes, they could do that, *but it would be an inconvenience.* In fact, you *could* pay all your bills by wire, I suppose. (9:1399) [emphasis supplied].

Midwestern's total purchased gas cost bill for its Northern System averages $1.3 million per month. (Exh. 25, Sch. 1) It seems not unreasonable to suggest that where financial obligations of this magnitude are involved, substantial weight should be given to the company's own management decision as to what constitutes a reasonably prudent and safe practice in meeting the payments due under its gas purchase contract. In the absence of a showing that the practice followed by the company for this purpose is clearly unnecessary, wasteful and unreasonable, it hardly seems appropriate to impose upon the company the Staff's idea as to how it might do business, leaving the company without reasonably adequate breathing space—particularly when the total return dollars which would be saved for the ratepayers even if we were to adopt the Staff's instant position would amount to approximately $15,200 on an annual basis.[36]

For the reasons set forth above, Midwestern's claimed allowance of $233,893 for the lag associated with purchased gas costs on its Northern System is approved.

---

[36] The total claimed gas purchase lag for the Northern System amounts to $233,893. On the basis of the 6.5 percent rate of return here adopted, the elimination of this particular working capital allowance would save the ratepayers a total of $15,203 in return dollars.

In view of the approval of this particular allowance for gas purchase lag, it becomes necessary to deal with a Staff contention (made in its initial brief, p. 77–78, for the very first time in this proceeding) that any such allowance should be offset by 21/45 of the 45-day operating expense allowance. Staff bases this contention upon the fact that in the last *Tennessee* rate proceeding Docket No. G–19983, on the basis of a detailed and careful Staff study indicating that Tennessee's actual experienced lag between operating disbursements in general and collections was in fact only 23.95 days, the Presiding Examiner's initial decision in that case concluded that 21/45 of the conventional 45-day operating expense allowance was not needed for that purpose and could accordingly be used as an offset to other gross working capital requirements. Staff concludes that there is no reason to suppose that Midwestern's actual experienced lag between payments and collections is any different from Tennessee's experience; that accordingly a similar offset is available here.[37]

In the absence of any showing to the contrary, the Commission has conventionally and normally included in working capital an allowance for 45 days' operating expenses as cash working capital, based upon the assumption of an average period of 45 days' lag between actual receipt of revenues and the payment of related expenses. *El Paso Natural Gas Co.*, 22 FPC 260, 270; *Union Producing Co.*, Op. No. 414, 31 FPC 41 at 49. It is accordingly concluded that if Staff desired in the instant case to take the position that the actual lag experienced by Midwestern is significantly shorter than the conventionally-allowed 45-day lag, the burden was on Staff to establish by competent and persuasive evidence the correct facts with respect to Midwestern's actual lag experience. However, Staff has not undertaken to make or present any study of Midwestern's actual lag experience in this case. Instead, its effort to satisfy this burden was confined to two questions presented to Midwestern witness McGee during cross-examination, in a manner which did not identify the precise issue involved or the purpose of the Staff inquiry. McGee was asked by Staff counsel to state whether he had any reason to suppose that the actual lag between expenditures and receipts by Midwestern was any longer than that experienced by Tennessee, and whether he knew of any reason to think that the actual lag now being experienced by Tennessee is any longer than that for the year ending July 31, 1959. (9:1402) McGee replied that he had made no studies to determine either matter; that he did not know of any particular reason *offhand* to think that the lag in the case of Midwestern would be longer than that for Tennessee; that with respect to Tennessee's current actual lag as compared with that experienced for the year ending July 31, 1959, he "wouldn't assume that it has changed in particular" and had "no indication either way that has been called to my attention," but

> I would be surprised if there were any serious changes in it either way. I think we have been operating rather normally. (9: 1402–3)

As noted above, this particular Staff offset theory was not advanced at any stage of this proceeding prior to its instant initial brief. It was not included in the working capital allowance presentation of Staff witness Parks, either on direct or rebuttal. Furthermore, it was not raised by Staff counsel during the course of a lengthy prehearing conference at the outset of this proceeding, during which the Presiding Examiner devoted considerable time to a discussion

---

[37] Staff's computation of such a proposed offset as amounting to $213,437, being 21/45 of a gross 45-day allowance of $452,804, is an error. Staff's proposed 45-day allowance here is only $277,698 (Exh. 55, Sch. 4, line 17), and 21/45 of this amount would be only $129,407.

seriatim of each of the controverted issues in this proceeding, including issues raised with respect to the working capital allowance.

The Staff, as well as all other parties, understood that all of the procedures adopted in the instant proceeding were designed to eliminate the element of surprise, and to make possible an orderly and useful development on the record of the material and relevant facts. It seems clear that if Staff had raised this particular issue at the prehearing conference, or during the hearing itself, the actual facts on this question would have been developed on the record in an orderly and reliable manner. Instead, we have a situation in which Staff's instant contention rests entirely upon the brief colloquy with Midwestern witness McGee, referred to above, which plainly does not rise to the dignity of an evidentiary study establishing the facts with respect to Midwestern's actual lag experience.

Under these circumstances, it is concluded that Staff's handling of this particular matter has not provided a satisfactory or adequate basis for setting aside the Commission's normal and conventional assumption of an average 45-day lag. Accordingly, this particular Staff offset theory is rejected.

Pursuant to the above, a total gross working capital allowance of $712,262 is approved here, consisting of the following:

Cash working capital (⅛ of net operating expenses)	$303,463
Allowance for Northern System gas purchase lag	233,893
Materials and supplies	117,635
Prepayments	57,271
Gross Working Capital	$712,262

As will be developed at a later point, a zero Federal income tax allowance is derived for the purpose of this decision. Accordingly, there will be no Federal income tax offset to gross working capital.

IV. Rate of Return

The Staff here recommends an overall rate of return of not more than 6.5 percent for Midwestern. The company, however, insists that a rate of return of 7.3 percent is required. A rate of return of 7.3 percent would be far in excess of the highest overall rate of return which the Commission has ever allowed a major pipeline company. (1:110) [18]

The rate of return problem with respect to Midwestern has had a long and controversial history, which includes the following historical background of interest.

1) In the original certificate proceeding with respect to Midwestern's Southern System, *Midwestern Gas Transmission Company, et al.*, Op. No. 320, 21 FPC 653 (May 12, 1959), the Commission noted that one of the greatest difficulties in connection with the Midwestern application arose from its proposed rate of return of 7 percent. The Commission then stated:

> With a 6¼ percent rate of return the return on the common stock becomes 9.3 percent, and it will range up to 13.4 percent for a 7 percent rate

[18] The Commission has never previously approved an overall rate of return higher than 6½ percent for any company, with the exception of a single case involving Cimmaron Transmission Company, a small, newly organized gathering and pipeline system whose total facilities involved an estimated cost of $447,264—a company not in any way comparable to Midwestern. (*Texas Pacific Coal and Oil Company, et al.*, 22 FPC 1059, December 1959.)

of return. In view of the high cost of the bond money it is our judgment that 6 percent would be too low, but 6¼ percent would be reasonable and adequate particularly in view of the fact that Midwestern will have no trouble marketing its gas. Seven percent is obviously too high. (21 FPC 658–9)

2) The rate of return question was again the subject of serious controversy in the subsequent certificate proceeding relating to Midwestern's Northern System, *Midwestern Gas Transmission Company, et al.*, Op. No. 331, 22 FPC 775 (Oct. 31, 1959). The Commission noted that:

> Midwestern's plans for the proposed financing of its northern system, as well as its proposed rates for sales therefrom, are based on a 7 percent rate of return to be achieved in 1963, the third full year of operation. Midwestern undertook to show through testimony of the Chairman of its Board that in view of the high cost of debt money in today's money market, this rate of return is necessary to finance the project.
>
> * * * * * * *
>
> In Opinion No. 320 we permitted a rate of return of 6¼ percent for the southern system and we do not contemplate a lower rate of return for the northern system.
>
> * * * * * * *
>
> We do not think it wise to attempt to look six months or a year into the future and undertake to fix a rate of return now based upon future conditions that cannot be known with reasonable certainty. We shall, therefore, require Midwestern to file with the Commission, prior to commencing construction, the firm proposals for financing as finally consummated and we shall at that time fix a rate of return. Thereafter, and no later than 60 days prior to the commencement of service, Midwestern shall file rate schedules satisfactory to the Commission covering the sales authorized herein, which rate schedules shall be accompanied by cost of service data showing the derivation of the specific rates, and which take into consideration, among other things, the resultant cost of financing to Midwestern. (22 FPC 784–5)

The Commission then stated:

3) Pursuant to the above order, Midwestern subsequently filed rate schedules for its Northern System sales reflecting a rate of return of 7 percent per year. However, by letter order dated August 19, 1960, the Commission rejected such rate schedules on the ground that:

> The proposed rates for the Northern System reflect a rate of return of 7% per year. It is the Commission's opinion that the proper rate of return for the Northern System is 6½% per year. This rate and the 6¼% rate heretofore allowed on the Southern System will permit an average rate of return of about 6.38% on the undepreciated cost of plant for both systems as estimated in the certificate proceedings in Docket Nos. G–16841 and G–18313, *et al.*

4) On September 1, 1960, Midwestern filed an application for rehearing of the August 19, 1960 letter order, and on October 10, 1960, the Commission issued an Order Denying Application for Rehearing. In this order the Commission stated:

> We have not to date allowed any comparable pipeline system to earn a rate of return in excess of 6½ percent and it would seem certainly obvious to Midwestern that there was a strong possibility of our not permitting it to begin its service with rates which would earn in excess of a 6½% rate of

return in the third year which is the crucial year for judging the economic feasibility of a new project. (24 FPC 845)

5) The Fifth Circuit affirmed this Commission order in *Midwestern Gas Transmission Co.* v. *F.P.C.*, 292 F. 2d 119, 122 (June 30, 1961), stating:

> The third year of operation was a proper year upon which to base a rate of return for rate-fixing purposes. It would be the first full year of normal operations.
>
> * * * * * * *
>
> It is our conclusion that the Commission order is supported by the evidence before it, and that its requiring rates based upon a 6½% rate of return for the third year of operation is reasonable and proper and is not arbitrary, capricious, confiscatory or violative of Midwestern's rights to due process.

For the purpose of our instant rate of return determination, it is noted that as of December 31, 1962 Midwestern's capitalization included $59,979,000 in long-term debt,[19] $10,000,000 in preferred stock, and $17,125,973 in common equity. (Exh. 5–B.)

The Staff's proposed capitalization in Exh. 5–B includes Deferred Federal Income Tax in the amount of $3,182,200, at a 1.5 percent cost, pursuant to the Commission policy previously established in the *Northern Natural Gas Company* case, Op. No. 342, 25 FPC 431, and the *El Paso Natural Gas Company case*, Op. No. 366, 28 FPC 688, in connection with the treatment of liberalized depreciation in the allowance for Federal income taxes. However, a totally different treatment of this matter is now required as a result of the Commission's recent *Opinion and Order on Proper Rate Treatment of Liberalized Depreciation Tax Deductions* in *Alabama-Tennessee Natural Gas Company*, Op. No. 417 (February 3, 1964).[20] The Commission there held:

> (6) Upon reexamination of the present policy of basing income tax allowances for a company which pays taxes calculated under liberalized depreciation on the deductions available under straight-line depreciation, we find that there is no present factual justification for thus normalizing the prospective rates of Alabama-Tennessee and other natural gas companies similarly situated so that such rates should reflect only the actual taxes currently payable during the applicable test year in Docket No. G–19984 herein.
>
> (7) Upon reexamination of the present policy of permitting a specific return of 1.5 percent to be earned upon the portion of the rate base equiv-

---

[19] Midwestern adjusts the actual long-term debt of $59,979,000 downward to exclude $2,379,000 in long-term debt which was due to be retired in 1963, in accord with a practice previously followed by the Staff of excluding debt due within one year. Midwestern contends that the Commission in the past has consistently excluded such debt, just as new debt about to be issued is included in the capitalization in order to arrive at a capital structure which is representative of the future; and that such a practice is particularly appropriate in the instant Sec. 5(a) proceeding, where rates are to be fixed for the future. Staff witness McGrath, however, testified that Staff more recently has departed from this practice on the ground that: (1) There is continual construction and accordingly a continual replacement of debt; (2) accordingly, if long-term debt due within one year were excluded, only one side of the picture would be reflected because Staff was not in a position to determine or reflect the new debt which might be issued during the year or in the near future. (6: 1026–8) On the record made in the instant case, it is concluded that Staff's position is persuasive and that long-term debt due to be retired in 1963 should not be excluded.

[20] Rehearing and Stay denied under Op. No. 417–A, issued April 15, 1964 31 FPC 928. This will be discussed in further detail in connection with our consideration of the required allowance for Federal income taxes, *infra*.

alent in amount to accumulated "deferred tax" funds in Account 282, we find that Alabama-Tennessee and other natural gas companies similarly situated are not entitled to any return upon such customer-contributed capital so that the amount of such funds in Account 282 during the applicable test year in Docket No. G–19984 will be excluded from the recognized rate base herein. (31 FPC 208 at 221)

Op. No. 417 requires a zero return on the accumulated deferred balances.[20a] Accordingly, in constructing the Midwestern capitalization as of December 31, 1962, for the purpose of our instant rate of return determination, Deferred Federal Income Tax in the amount of $3,182,200 will be included at a zero return, in place of the 1.5 percent cost reflected by Staff on Exh. 5–B. As a result of this adjustment, the return allowance on Midwestern's common equity under the Staff's recommended overall rate of return of 6.5 percent would be 10.46 percent, as shown by the following table:

	Amount	Percent	Cost	Rate of return (percent)
Long-term debt	$59,979,000	66.43	$5.88	3.906
Preferred stock	10,000,000	11.08	5.50	.6094
Deferred Federal income tax	3,182,200	3.52	0	
Common equity	17,125,973	18.97	10.46	1.985
	90,287,173	100.00		6.5

The Staff correctly observes that the conflicting rate of return recommendations here presented by Midwestern and Staff result from two basically differing approaches—(1) the Midwestern approach, insisting that it be treated as if it were an entirely separate and independent enterprise, and (2) the Staff approach, in which emphasis is placed upon the reality of Tennessee's parentage and control and the important consequences which flow from those facts.

Midwestern commences its discussion of the rate of return issue with the assertion that

> the principal controversy concerns the fair return allowance on Midwestern's common equity and the factors to be considered in arriving at that allowance. (Initial brief, p. 63)

It then summarizes its position as follows:

> The evidence conclusively shows that a 6½ percent over-all return allowance is grossly inadequate, not only because it would result in a return on common equity for a relatively new company [Midwestern] which is far below that being earned by seasoned pipeline companies and electric utilities which have a thicker equity and far better financial standing, but also because the low coverage of interest charges resulting from a 6½ percent over-all return would jeopardize the credit of Midwestern and seriously impair its ability to obtain new debt capital (Tr. 559–64, 582–90).
>
> * * * * * * *
>
> Considering, *inter alia*, the *thinness of Midwestern's equity*, the returns on common equity being allowed by the Commission *to thin equity pipelines* and the earnings of well-established and successful pipeline companies, Mr. Clarke concluded that *13 percent is the minimum fair return on Midwestern's common equity* (Tr. 590). Allowing for the imbedded cost of debt

[20a] Op. No. 417, p. 220, and Op. No. 417–A, pp. 931, 932.

and preferred stock and a 13 percent return on equity, the over-all return for Midwestern would be approximately 7.3 percent, based on its capitalization as of December 31, 1962, adjusted to exclude debt due within one year. * * * (Initial brief, p. 64) [Emphasis supplied.]

In support of its position that the fair return on its common equity is at least 13 percent, Midwestern relies upon evidence relating to (1) returns earned on book value by 10 major pipelines, (2) earnings of electric utilities, and (3) the Commission's past return allowances to thin equity companies.

With respect to returns earned on book value, Midwestern points out that the Staff's study of 10 major pipelines (Exh. 5, p. 3) shows a median average return on common book equity of 13.2 percent for the 10-year period 1952–61, and an average return earned on equity of 13.1 percent for the 5-year period 1957–61. During the latter period the pipeline industry in general earned between an 11 percent and 13 percent return on book equity, on an average equity of 30 percent as compared with Midwestern's approximately 20 percent equity.

Midwestern further contends that, under an application of the comparative earnings test, the Commission is obliged to allow pipelines (and Midwestern in particular) a return on equity higher than the average return on book equity of 11 percent earned by the electric utilities over the years. This is not a new contention, and the Commission has not heretofore found it to be persuasive. *Tennessee Gas Transmission Corp.*, 24 FPC 204, 207–9, affirmed, 293 F. 2d 761 (CA5); *El Paso Natural Gas Co.*, 28 FPC 688, 694–5, 699. As the Commission found in *El Paso*, the natural gas industry is "stable and prosperous"; and it has convincingly demonstrated its ability to attract the needed amounts of capital. In the Tennessee interim order rate of return case, *supra*, the Commission granted Tennessee an overall rate of return of 6⅛ percent, providing an allowance of 10.12 percent on the Tennessee common equity, despite the company's identical contention in that case that Tennessee and other natural gas pipeline companies were entitled to a higher return on equity than electric companies "which have historically received a return of close to 11 percent on a larger common equity base."

The Staff alleges that almost all of the Commission's recent decisions in pipeline cases have yielded returns on equity in the 10–10.5 percent range (citing cases decided in 1960 or later). However, Midwestern contends that these particular decisions are not applicable here because they dealt with well-established pipelines, with a much lower cost of debt and a thicker equity than Midwestern; that

> * * * where, as here, companies have had an exceptionally thin equity, the Commission has consistently recognized that, because of the greater risks involved, a higher allowance on equity is required. * * * (Initial brief, p. 68)

Actually, the only truly recent case cited by Midwestern in support of this latter conclusion is the *El Paso Natural Gas Company* case, Op. No. 366, 28 FPC 688 (1962); and it is clear that the Midwestern position that it is entitled, as a thin equity company, to a 13 percent return on equity on the basis of Commission practice in recent years, rests largely upon that decision. In the *El Paso* case, involving four different dockets reflecting equity ratios ranging from 18.205 percent to 21.091 percent, the Commission agreed with the company that its thin equity should receive "a somewhat greater percentage allowance than if it were thicker"; that "the proper return on common equity should fall between the earnings-price ratios and the earnings on book value, but would naturally lie much closer to the upper level of this range because

its common equity is thin." The Commission there approved overall rates of return of 6 percent and 6⅛ percent in the four dockets, reflecting returns on equity ranging from 11.99 percent to 12.96 percent. (28 FPC 701–702) Midwestern contends that, on the basis of the same rationale, a 13 percent return on equity for Midwestern is justified, when considering that it not only has a more risky capital structure than El Paso, but is a relatively new venture which cannot reasonably be expected to be able to attract capital on the same return basis as established pipelines. (Initial brief, p. 70)

The basic and fatal flaw in this entire Midwestern position is that it completely ignores the overriding and determinative factor that Midwestern is a creature of Tennessee, owned and controlled by Tennessee. This is not merely a matter of theoretical, abstract analysis, but a factor of overwhelming significance which makes it wholly unrealistic and sterile to attempt to analyse the instant rate of return issue in the terms employed here by Midwestern. The suggestion that Midwestern is a small and relatively new company, alone and adrift in a lone and friendless sea, is not persuasive in view of its close affiliation with Tennessee, which has been characterized as

> * * * not an "average" pipeline company but rather * * * one of the largest and soundest (*Tennessee Gas Transmission Co.* v. *F.P.C.*, 293 F. 2d 765)
>
> * * * * * * *
>
> * * * Tennessee enjoys a favorable and improving position in the money market in relation to the rest of the industry.
>
> * * * * * * *
>
> * * * there has been a substantial increase in the market price of its stock since 1946, reflecting the favorable position which its common stock enjoys in the market place. (Tennessee Gas Transmission Co., 24 FPC 207–8)

In the original certificate proceeding with respect to Midwestern's Southern System, Gardiner Symonds, Chairman of the Board of Midwestern and Tennessee, testified as follows with respect to the benefits of Midwestern's affiliation with Tennessee:

> Q. Then when Midwestern is going into the money market, does it receive any benefits of its being a subsidiary of Tennessee?
>
> A. In my opinion, it receives great benefits from being a subsidiary of Tennessee as to the stability and association with a company with 15 years of history in the money markets and 15 years of history in operation. (6: 968)

Midwestern witness Hunsaker, Vice President and Director of Colonial Management Associates, Inc., which purchased $2 million face value of Midwestern mortgage bonds in June 1960, testified as follows in the instant proceeding:

> We were also impressed in 1960 by the sponsorship of the company by the Tennessee Gas Company, a remarkably successful enterprise in the post-war years. We did not have the worry and problem as to management in all the many complex departments of a brand new gas company. * * * (10: 1471)

In the *El Paso* case, *supra*, involving a company whose common stock is traded on the market and publicly held, the Commission concluded that

> In the present proceeding the most significant fact with respect to the common equity is that it is so "thin." (28 FPC 700)

In the instant proceeding the most significant fact with respect to Midwestern's common equity is not that it is so "thin," but that it is owned and controlled by Tennessee.[21]

It is of interest to note, in this connection, certain historical facts with reference to the manner in which Midwestern has been operated, making it clear that Midwestern management has not been guided by the single objective of promoting the distinct and separate interests of Midwestern, as opposed to the interests of the Tennessee system as a whole. Thus, although Midwestern witness Hunsaker here testified to the importance of a gradual improvement in the credit standing of Midwestern and indicated that a retention of earnings by Midwestern would definitely contribute toward this end (3:563–4), the Midwestern directors in late 1962 voted to pay a $4.8 million dividend to its common stockholder, Tennessee (10:1492–3). This represented substantially all of the refund received by Midwestern from Tennessee as a result of the Commission order of December 21, 1962 approving the settlement of the Tennessee rate cases (Docket No. G–19983, *et al.*)—except for $923,440 which Midwestern in turn passed on to its own customers.[22] It also represented about 90 percent of Midwestern's earned surplus at the end of 1962. Thus, instead of treating the $4.8 million as retained earnings, Midwestern simply transferred it back to Tennessee in the form of a dividend. This would appear to underscore the irrelevance of any inquiry in this proceeding into the level of equity return which would be needed by Midwestern *as a separate entity.*

The basic flaw in Midwestern's approach here becomes clear in the light of certain general principles laid down by the Commission in recent rate of return decisions. In its Order Denying Applications For Rehearing in the *Tennessee* interim order rate of return case, *supra*, 24 FPC 525 (September 1960), the Commission stated:

> A lower equity ratio does not necessarily demand a higher rate of return as Tennessee contends. It may well be true that a high leverage condition with a thin equity is indicative of a greater risk than a low leverage, thick equity situation. *But the equity ration is only one element or factor to be considered in appraising the risks associated with the common equity of any given company, and certainly no mathematical measure of differences in risk can be derived from comparing the equity ratios of different pipeline companies.*
>
> * * * * * * *
>
> The determination of a proper allowance for common equity is peculiarly *a matter of judgment* for the Commission. A rate of return cannot be a matter of slide rule computation. Consideration must be given to a multiplicity of factors, some of which cannot be isolated and objectively measured

---

[21] Midwestern's initial brief characterizes it as a "wholly owned subsidiary of Tennessee." (p. 63) Subsequently, in connection with its discussion of Staff's "double leverage" theory, the Midwestern brief makes a passing reference to the fact that on October 9, 1963, Tennessee advised its stockholders that on December 10, 1963, it would distribute one share of Midwestern common stock to Tennessee stockholders for each 200 shares of Tennessee common shares held as of November 15, 1963. (p. 73) However, Midwestern makes no further reference to this situation, in spite of the fact that its instant reply brief was filed subsequent to the December 10th deadline, and the Midwestern reply brief does not modify or qualify its original characterization of the company as a "wholly owned subsidiary of Tennessee."

[22] Moody's Public Utility Manual, 1963, at p. 1320.

and weighed, yet which, in the circumstances of any given case, may tip the balance one way or the other. (24 FPC 562–7) [Emphasis supplied.]

Similarly, in the *El Paso* case, *supra*, the Commission stated:

> Our determination must be founded upon our judgment applied to a number of factors. No mechanical rule is possible although certain elements will have more force than others in guiding us to a conclusion.
>
> In former proceedings we have ordinarily proceeded by determining the cost of the company's debt and of its preferred stock, by making an allowance for its common equity based upon earnings-price ratios and other factors, and by applying these amounts to the company's capitalization so as to arrive at a rate of return. To use this approach alone, in our opinion, places too great an emphasis on the exact percentage of the equity ratio in the capital structure and provides no incentive for reducing the cost of debt and preferred stock. Therefore, we think it important and realistic also to consider the end result, for it is the overall return which measures the total costs to consumers, and the total return to all investors. We shall therefore base our decision on consideration both of a proper return on equity in accordance with our previous practice and of a proper overall return under all the applicable circumstances. (28 FPC 691–2)

Midwestern's instant approach falls into the very vice which the Commission criticized in the above statement, in that it reduces the rate of return determination to a narrow and formalistic slide rule computation, places undue emphasis upon the exact percentage of the equity ratio in the Midwestern capital structure, ignores the one overwhelming and determinative factor that Midwestern is a creature of Tennessee, owned and controlled by Tennessee, and ignores the end result. In view of this overriding factor, it is particularly true here that no mathematical measure of differences in risk can properly or meaningfully be derived by attempting to compare the Midwestern equity ratio with the equity ratios of other pipeline companies whose common stock is publicly held and whose financing programs include the sale of further common stock to future equity investors.

Midwestern, however, contends that an equity investment in Midwestern is entitled to a higher rate of return than an equity investment in Tennessee "because of the greater risks involved"; that the higher contemporaneous cost of debt to Midwestern is clear evidence that the debt investor regards Midwestern as a greater investment risk than Tennessee. Midwestern then concludes:

> No one would expect or even suggest that the debt investor should put his money in Midwestern for the same return which he could get from Tennessee. Why should the equity investment be treated any differently? (Reply brief, p. 63–4)

The answer is that the relationship between Midwestern and Tennessee makes it quite irrelevant to consider what return on equity would be necessary to attract sufficient amounts of *equity capital* to Midwestern *from outside investors*. So far as our instant record reveals, there has never been the slightest intention to place Midwestern in a position in which it would attract the necessary amounts of equity capital *on its own*. It is clear that from the beginning Midwestern has been a project of the parent Tennessee, and there has been no intimation that Tennessee currently entertains any thought of setting it adrift as an independent enterprise. If Midwestern is to remain under the control of

the Tennessee system, then there can be no question that Tennessee will continue to be the predominant source of equity capital for Midwestern."[23]

The Midwestern reply brief attempts to raise doubts as to the reliability of any such assumption, arguing that:

> * * * even if * * * assumptions as to Tennessee's desire to retain the controlling interest in Midwestern are sound, this does not mean that the only future substantial source of equity capital for Midwestern would be from Tennessee. Voting control is often maintained in corporations with even less than 51 percent ownership. Moreover, why does the Staff assume that Tennessee is bound to supply equity funds to Midwestern in the future at less than a fair return? Clearly, Tennessee is obligated to its stockholders to invest in securities only where it is reasonable to believe that a fair return commensurate with the risks involved can be obtained. (p. 69–70)

Although the above statement, for the purpose of argument, poses *possibilities* which are within Tennessee's power, there is in fact no suggestion that Tennessee does not desire to retain its controlling interest in Midwestern; nor is there any suggestion that it is seriously expected or intended to accomplish future equity financing for Midwestern by the sale of its common stock to the general public; neither is it suggested that Tennessee has any actual intention to dilute its control over Midwestern to less than 51 percent ownership, or to any level in that neighborhood. We find equally academic and unrealistic the suggestion that unless an overall rate of return of 7.3 percent is approved in this proceeding, providing a 13 percent return on Midwestern's equity, Tennessee might "refuse" to supply equity funds to Midwestern in the future, because of its obligation to its own stockholders "to invest in securities only where it is reasonable to believe that a fair return commensurate with the risks involved can be obtained."

It is difficult to view such a suggestion seriously, unless we are to totally ignore the nature of the relationship between Tennessee and Midwestern, and Tennessee's purpose in originally setting up the Midwestern system. It was Tennessee itself which made the management decision at that time to set up the Midwestern pipeline system as a separate company, with a relatively thin equity, rather than as a part of its own operation. Under these circumstances it does not seem realistic to suggest that Midwestern's thin equity ratio means a higher risk to *Tennessee* and that it is accordingly necessary to provide a higher return on the Midwestern equity in order to *compensate Tennessee* for such higher risk. In the *Tennessee* interim order rate of return case (24 FPC 204, 209, *supra*), the Commission approved an overall rate of return of 6⅛ percent for Tennessee, concluding that the resultant equity return of 10.12 percent was "fully adequate for Tennessee, and * * * sufficient to enable Tennessee to attract new equity capital and preserve its financial integrity." Although Tennessee disagreed with and attempted (unsuccessfully) to overturn that decision, it is not suggested that Tennessee has any desire or intent to seek authority to abandon any portion of its own pipeline operations under these conditions. If Midwestern is here allowed an overall rate of return which will reflect a similar allowance on the Midwestern equity, there is no more reason to suppose that

---

[23] Even the small minority interest in Midwestern equity which exists today as a result of Tennessee's December 10, 1953, distribution of one share of Midwestern common stock to Tennessee stockholders for each 200 shares of Tennessee common stock, has arisen not from a Midwestern management decision to seek out additional equity financing, but rather from the decision of *Tennessee management* to pay its own shareholders a dividend in the stock of Midwestern.

Tennessee would desire to cut adrift and relinquish its control over the Midwestern pipeline system, than if the Midwestern system had originally been constructed merely as an addition to Tennessee's own pipeline system.

For the reasons indicated above, it is concluded that Tennessee's *needs* are the only relevant subject of inquiry here under the capital-attraction test, and that this calls for an assessment of Tennessee's *overall* capacity for capital attraction. Just as purchasers of Tennessee common stock do not elect to invest in Tennessee's gas producing activities alone as a separate enterprise (and we therefore look at earnings-price ratios reflecting the market's appraisal of the risks of the *entire* Tennessee enterprise), so it is that investors furnishing Tennessee's equity capital do not confine their attention to Tennessee's financing of its subsidiary, Midwestern. The question of Tennessee's overall needs was fully considered and resolved by the Commission in the *Tennessee* interim order rate of return case, *supra*, when it concluded that a 10.12 percent equity allowance was sufficient for that company.

If Tennessee had set up the Midwestern pipeline as an expansion of its own utility plant, rather than as a separate company, using for this purpose the same amounts of debt, preferred stock and equity financing which actually were employed by Midwestern, at Midwestern's actually experienced debt and preferred stock costs, it is reasonable to assume that an equity return in the area of 10.12 percent would still have been regarded as fully adequate for Tennessee. Under the circumstances, it is difficult to see why a higher allowance is required or justified for the Midwestern common equity, owned by Tennessee, merely because Tennessee management elected to create Midwestern as a separate company. The investors furnishing Tennessee's equity capital do not require any greater allowance in connection with the Midwestern operation than they would require in connection with any other additions which Tennessee might elect to make to its own pipeline system.

Under all the circumstances set forth above, it is concluded that a reasonable and proper return allowance on Midwestern's common equity would be the level of return which has been allowed on Tennessee's equity, and which is in the range of equity returns allowed by this Commission in recent years to other pipeline companies with equity ratios similar to that of Tennessee. As indicated at an earlier point, as a result of the Commission's recent decision on the proper rate treatment of liberalized depreciation tax deductions in *Alabama-Tennessee Natural Gas Company*, Op. No. 417, it has become necessary to revise Staff's Exh. 5–B rate of return computation to reflect Deferred Federal Income Tax in the Midwestern capitalization at a zero return, in place of the 1.5 percent cost shown by Staff, with the result that Staff's recommended overall rate of return of 6.5 percent will now produce a return allowance of 10.46 percent on Midwestern's common equity. This more than meets the test set forth above, and it is accordingly concluded that an overall rate of return of 6.5 percent is reasonable and proper for Midwestern in the instant proceeding.

Before concluding this discussion with respect to the return allowance required on Midwestern's common equity, it is of interest to note that a great deal of attention was devoted during the instant hearing and in the briefs of the parties to a "double leverage" approach presented by Staff witness McGrath, which the Staff initial brief characterizes as "one useful method of analyzing the unique problems created by the parent-subsidiary relationship." (p. 87) Under this theory Staff contends that its recommended 6.5 percent overall rate of return would actually provide an equity allowance of 25.102 percent for that portion of Tennessee's investment in Midwestern common stock which allegedly came from Tennessee *equity capital*; that this is a more significant fact to be con-

sidered here than the resultant equity allowance of 10.185 percent which a 6.5 percent overall rate of return would provide[24] for Midwestern's *total equity* capitalization. Staff's "double leverage" theory may be summarized as follows: (1) There is no way to determine the actual source of the dollars used by Tennessee for its $17.1 million investment in the Midwestern common stock. Therefore, Staff commences with the basic assumption that these dollars were divided up into (a) *debt* dollars, obtained from Tennessee debt financing, and (b) *equity* dollars, obtained from Tennessee equity financing, in the same proportions as Tennessee's total capital structure. (2) On the basis of this assumption, Staff concludes that $4.7 million of the Tennessee investment in Midwestern's common equity, or 5.27 percent of the total Midwestern capitalization, came from Tennessee *equity* money: and that the balance of the total Midwestern equity of $17.1 million came from Tennessee debt and preferred stock money, with $9.8 million, or 56.71 percent of the $17.1 million coming from Tennessee *debt* capital. (3) Staff concludes that on that portion of Midwestern's $17.1 million common equity which is presumed to have come from Tennessee debt money, Tennessee need only earn enough to cover the imbedded 4.54 percent cost of its own debt financing; and that Tennessee needs a higher equity-type return only on that part of the Midwestern $17.1 million common equity which is presumed to have come from Tennessee equity money—*i.e.*, $4.7 million. (4) Staff calculates that on the basis of a 6.5 percent overall rate of return for Midwestern, the equity return on this $4.7 million, representing 5.27 percent of the total Midwestern capitalization, would amount to 25.102 percent; and Staff concludes that this demonstrates that on the basis of an overall 6.5 percent rate of return for Midwestern the Tennessee equity would do very well indeed. Midwestern attacks Staff's "double leverage" theory as

> * * * a device for making low returns on equity appear generous. This is done by drawing attention away from the average return proposed on the over-all equity, and focusing attention on what would be the rate of return on a small portion of the equity if substantially less than the average return is attributed to the major portion of the equity. (Reply brief, p. 71)

The Midwestern briefs raise many substantial questions as to the logic and reliability of Staff's "double leverage" analysis, and the Staff briefs provide earnest responses to these criticisms. The net effect of the entire argument is that although the "double leverage" approach holds out an alluringly pat formula for dealing with the equity allowance problem, we are not persuaded that it constitutes a truly reliable and meaningful technique. Staff witness McGrath himself testified that in his view the "double leverage" treatment should not be used at all times in the future, but that if Midwestern came before the Commission subsequently in another rate case the situation at that later date would have to be re-examined (6: 965); that if the retained earnings of Midwestern built up to a high enough level, he might not come up with the same approach (6: 1009–11); that if more than 10 or 11 percent of Midwestern's common stock were publicly owned, he might wish to reconsider his approach. (6: 1011–12)

It is conceded that Staff's instant "double leverage" approach has never previously been adopted or relied on by the Commission. The "double leverage" technique has not been used or relied on in any way in this decision as a basis or support for the determination here made that a 6.5 percent overall rate of return is reasonable and proper for Midwestern. Accordingly, no purpose would be served here by discussing in any further detail the arguments and counter-

---

[24] As per Staff's Exh. 5–B computation.

arguments directed toward the "double leverage" method in the Midwestern and Staff briefs.

In addition to its basic argument with respect to the return allowance required on Midwestern's common equity, Midwestern makes the further contention that Staff's recommended 6.5 percent overall rate of return would have an adverse effect on its financial integrity and ability to attract capital, relying upon evidence presented by its witness Hunsaker with respect to coverage of interest by earnings, and the claimed impact of such a rate of return upon the value of the warrants which were used as an inducement to sell Midwestern's bonds.

Midwestern contends that in order to raise debt capital and preferred stock capital, a company must be able to demonstrate an earnings capacity which provides a satisfactory coverage of interest charges and preferred stock dividend requirements. It relies upon testimony by witness Hunsaker to show that the coverage of interest by earnings after taxes for Midwestern would be 1.6 times on the basis of Staff's recommended 6.5 percent overall return and 1.8 times on the basis of the company's own recommended 7.3 percent return; that both of these coverages are low when compared to the 2.8 times coverage for natural gas companies generally.[35] On the basis of these figures it appears that even the company's recommended return of 7.3 percent, which is vastly higher than any heretofore allowed by the Commission, would still leave Midwestern far short of achieving the average interest coverage.

Similarly, Midwestern witness Hunsaker cited, as another test of credit used by bond buyers, the coverage of interest plus sinking fund requirements (debt service charges) by cash flow—or, interest plus sinking fund requirements divided into the sum of net income, income taxes, interest and depreciation. He calculated that Midwestern's 1963 level of interest, plus sinking fund requirements would be covered only 1.7 times, on the basis of Staff's recommended 6.5 percent return, plus Staff's proposed depreciation allowance of 3.125 percent, as compared with 2.2 times on the basis of Midwestern's proposed 7.3 percent return and Midwestern's proposed depreciation allowances of 3.6 percent for the Southern System and 4 percent for the Northern System. Hunsaker concluded that the 1.7 times coverage was completely inadequate, and that even the 2.2 times coverage resulting from the Midwestern recommendation was on the low side. These comparisons have been rendered partially moot in the light of the fact that the instant decision adopts a depreciation rate of 3.5 percent for both the Northern and Southern Systems, which would produce over $300,000 more in annual depreciation allowances than the Staff proposal. As a result the coverage of interest plus sinking fund requirements by cash flow will actually be more favorable to Midwestern than that assumed in witness Hunsaker's testimony.

In connection with Hunsaker's testimony that the 1.7 times coverage was completely inadequate, he alleged that Midwestern's bond indentures forbid the sale of additional bonds unless the annual debt service requirement (interest and sinking fund payments) were covered at least 1.75 times. Staff, however, points out that there is still another provision of the trust indenture which forbids issuance of additional bonds unless the *interest alone* on all bonds, old and new, is covered 4½ times by the cash flow;[36] that even at the 7.3 percent return here proposed by Midwestern, the interest on all existing bonds would actually be covered only 3.8 times, and that in order to meet this particular

[35] 1961 FPC Statistics for Natural Gas Companies.
[36] Midwestern Gas Transmission Co. Prospectus, dated June 1, 1960, p. 19.

coverage test Midwestern would have to have an overall rate of return of 8.7 percent. (Reply brief, p. 14–15) Certainly no one would seriously contend here that Midwestern's financial integrity and ability to attract capital would be seriously impaired unless it were allowed a rate of return of 8.7 percent.

The mere statement of the matters set forth above would appear to be sufficient to raise doubt as to the meaningfulness of relying on a rigid mathematical comparison of fixed interest coverages as a controlling factor in determining the proper rate of return for Midwestern in this proceeding.

It is concluded that the 6.5% overall rate of return here adopted for Midwestern adequately safeguards the legitimate interests of its existing bondholders. As pointed out by the Staff, when the Midwestern mortgage bonds were issued in June, 1960 it was evident to investors that the company was to have a high percentage of long-term debt and relatively low coverages at any projected rate of return which the Commission could reasonably have been expected to authorize for the company's initial rates. By that time the Commission had already in Op. No. 320 (May 1959) rejected Midwestern's proposed 7 percent rate of return for the Southern System, directing that initial rates for the Southern System to be predicated upon a 6¼ percent rate of return; and in Op. No. 331 (October 1959), where Midwestern again proposed a 7 percent rate of return for its Northern System, the Commission had made it clear that this question was the subject of serious controversy, and that the matter would be looked into very carefully upon filing of Midwestern's firm financing proposals. The unusually high coupon of 5¾ percent on Midwestern's mortgage bonds was doubtless the result of two factors: (1) timing (June, 1960 was a time when debt money generally was very expensive—Exh. 4, p. 5); and (2) the potential investor's evaluation of the risks of this particular bond issue. The bonds were issued with warrents, which authorized the holder to purchase 4 shares of Midwestern common stock for each $1,000 bond, at $15 per share, between 1964 and 1973—and these warrants were characterized by witness Hunsaker as a "sweetener." (10: 1473) The high interest rate, plus the "sweetener" of the warrants, thus represented what was necessary to compensate prospective bondholders for the risks of lending money to Midwestern. Having already received this compensatory inducement for the purchase of the Midwestern mortgage bonds, it could not seriously be suggested that the bondholders are now entitled to have their investment converted into a bond with the type of interest coverage which is characteristic of an AAA-rated bond.

Midwestern further complains that Staff's proposed 6.5 percent rate of return would adversely affect its financial integrity because it would, for all practical purposes, destroy the value of the warrants, referred to above, which were used as an inducement to sell the mortgage bonds. However, Staff points out that although the warrant "sweetener" may have been necessary to induce investors to purchase the bonds in the first instance, the Midwestern bonds have now achieved independence as an investment, so that they can be and are evaluated entirely on their own—as evidenced by the fact that in July, 1963 the bonds were quoted on the market at 104 bid, *without warrants*, with none offered. (10: 1502) Furthermore, Midwestern witness Hunsaker emphasized that the overriding concern of the investors in these bonds was that Midwestern meet its contract obligations of interest payment and sinking fund retirement, and that the warrants were "by definition, merely a sweetener". (10: 1473) Staff correctly observes, in this connection, that if there had been no warrants, some of the persons who purchased Midwestern bonds might have chosen instead to invest in more secure bonds; that having chosen to forego greater security and to take instead the speculative fling on the warrants, these investors must be regarded

as fully compensated so long as Midwestern continues to meet its interest obligations and the obligations of the bond indenture are fulfilled regularly.

Staff further contends, however, that there is no adequate basis for the flat prediction that the warrants would be worthless if a 6.5 percent overall rate of return were here adopted for Midwestern. It is pointed out that the warrants are actually exercisable not just in a brief period in the immediate future, but over a full 10-year period from January 1, 1964, through December 31, 1973; that the potential value of the warrants accordingly cannot be measured merely by looking at the calculation of net earnings per share in the immediate future. It is suggested that one obvious and important factor which is bound to have a bearing on the value of the warrants is Midwestern's own dividend policy—*i.e.*, whether it will permit an appropriate portion of the earnings to be retained in the business, or whether there will instead be a repetition of the 1962 experience when substantially all of the refund received by Midwestern from Tennessee was transferred back to its parent in the form of a $4.8 million dividend.

Finally, Staff contends that the market place has just recently provided evidence that the warrants exercisable at $15 stand an excellent chance of having value, regardless of the outcome of the instant proceeding. As noted at an earlier point, the Tennessee directors voted to distribute as a dividend to its shareholders on December 10, 1963 one share of Midwestern common for each 200 shares of Tennessee common held as of November 15, 1963. The Staff now alleges, on the basis of information obtained from the Registration Statement and amendments filed by Midwestern with the Securities and Exchange Commission, that the Tennessee directors also decided to make a cash payment to holders of less than 200 shares of Tennessee common, in lieu of the issuance of fractional shares of Midwestern common; that pursuant to this undertaking, 63,043 of the Midwestern shares (being the "fractional shares") were on December 17, 1963, sold to an underwriter for $19 per share, less the underwriting expenses of $1.15 per share, and that this $19 per share valuation is treated as the basis for the cash payment to holders of less than 200 shares of Tennessee common; that in addition, prior to December 17, 1963, Tennessee also made an offer to those of its shareholders who would be entitled to receive from 1 to 10 full shares of Midwestern common, to have those shares also included in the sale to the underwriter; that this invitation was subsequently accepted by the holders of 41,516 out of the total of 64,520 of such shares, and those shares were then also sold to the underwriter at $19 per share less expenses. Staff observes that the underwriter must, of course, be assumed to have been aware of the instant pending Sec. 5(a) rate proceeding against Midwestern, which was fully disclosed in the prospectus. Under these circumstances the Staff concludes that the $19 may reasonably be regarded as the approximate valuation of Midwestern common shares in the market place, already discounted to some extent by the possibility of future rate reductions, and Staff accordingly contends that a warrant to purchase a Midwestern common share at $15 must be regarded as having a considerable *immediate* value.

Finally, Midwestern's recent actual experience provides the best and most realistic answer to the pessimistic predictions that anything short of the 7.3 percent rate of return proposed by the company itself will impair its ability to attract additional debt financing. In late 1962 (subsequent to the Commission's 1960 action rejecting Midwestern's efforts to base its initial rates upon a 7 percent rate of return, *supra*) the company was able to retire its 6 percent debentures and substitute in their place 5½ percent cumulative preferred stock, issued at par to a number of insurance companies. It is recognized that this, to some extent, reflects some relaxation in the general debt-money market after

the days of very tight money in 1960. However, it seems obvious that no company in really poor financial condition and repute would have been able to issue preferred stock to a class of institutional investors which Midwestern witness Clarke recognized as among the most astute in the business. (10:1517)

Still further evidence of Midwestern's financial status is afforded by recent market quotations of its first mortage bonds. According to Midwestern witness Hunsaker the bonds in July 1963 were bid at 105, with warrants attached, but none were offered—and at 104, exclusive of warrants, with none offered. (10:1502) In addition, Standard & Poor's Bond Guide for December 1963 shows a more recent quotation of 106 bid, with warrants attached. Under the circumstances, it does appear that existing bond holders are notably concerned about Midwestern's continuing ability to meet the 5¾ percent interest payment on these mortgage bonds, and it is apparent that there are other investors willing to take their place.

It is accordingly concluded, for all the reasons set forth above, that the 6.5 percent overall rate of return here adopted for Midwestern will not have an adverse effect upon its financial integrity and ability to attract capital.

V. Federal Income Taxes

A. *Guideline Depreciation Rates*

The issue presented here is the proper depreciation rate to be used for tax purposes in computing Midwestern's Federal income tax allowance. The problem arises under Revenue Procedure 62-21, established by the Internal Revenue Service in July, 1962, to supersede its Bulletin F. Bulletin F. set up hundreds of lives as a guide to taxpayers in determining depreciation expenses for tax purposes. Revenue Procedure 62-21 sets forth greatly shortened service-lives (Guideline lives) for numerous classes of depreciable plant compared with the service-lives previously suggested in Bulletin F. The Guideline life for pipeline is 22 years (10:1419), resulting in a depreciation rate of 4.54 percent. (11:1667)

Midwestern admittedly has not claimed Guideline lives on its previous income tax returns, and states that it does not intend to do so in the future, for the reason that there were

> * * * serious doubts in our minds that we could qualify for the use of Guideline depreciation, and there was real concern as to the consequences which would result if we adopted Guideline depreciation. (11: 1661-2)

Accordingly, Midwestern in the instant proceeding uses a 3.5 percent depreciation rate for tax purposes, this being the same rate now booked by the company and claimed on its tax returns.

Midwestern witness Cresap, a partner in the firm of Arthur Andersen & Co., testified that in his judgment the reserve ratio test[27] was probably "the essential part" of the Guideline depreciation rate procedure; that he did not believe Midwestern's depreciation reserve could ever be adequately tested under the reserve ratio provisions, because Midwestern did not have the type of assets which the reserve ratio was designed to test for depreciation. (11: 1590) He reached this conclusion not merely because Midwestern was a new company, but

> * * * also because the reserve ratio test is not reliable when applied to companies with only a few units of physical property, nor is it reliable when

[27] The reserve ratio is the percentage between the reserve for depreciation and the total basis (cost) of an asset group. (13: 523)

applied to companies which acquire assets at very irregular intervals. (11: 1577)

He also noted the "increasing emphasis" which the Internal Revenue Service places on the use of *good faith* in the application of the Guideline depreciation rate procedure. He concluded that there could be no "good faith" justification for a 22-year life for tax depreciation purposes when it is clear that such a 22-year life would not be sustained by the company's retirement and replacement practices (11: 1577); that there was serious doubt whether the Internal Revenue Service would permit Midwestern to use the 4.54 percent Guideline depreciation rate, reflecting a Guideline life of 22 years, if this Commission in connection with its determination of Midwestern's transmission depreciation expense concluded that the company has a service life substantially in excess of 22 years. (11: 1591)[*] In this connection, Cresap testified that it was not the general practice for pipeline companies to use tax depreciation lives which are substantially different from book depreciation lives. (11: 1577-9) It is suggested that although a slight difference of possibly 12 percent might not be considered significant by the Internal Revenue Service, a substantial difference such as 32 percent (between the Guideline rate of 4.54 percent and the 3.5 percent rate now being booked by Midwestern) might well result in a refusal by IRS to permit the company to use Guideline lives. (11: 1667)

Under all these circumstances, Midwestern concludes that it is highly doubtful that it could qualify for the use of Guideline depreciation; that in the judgment of its management the company could not *in good faith* claim Guideline depreciation, and that in law and good conscience it should not, in effect, be forced to claim it. Midwestern further concludes that if it were nevertheless to use Guideline depreciation, the consequences thereof could be financially detrimental and adverse. Witness Cresap, for example, pointed out that there could easily be a period of 3 or 4 years for which tax deficiencies would have to be paid with no recovery possible from customers, if rates were here fixed on the basis of Guidelines lives and the Internal Revenue Service should subsequently disallow Guideline lives. (11:1574-5)

In the prepared testimony originally distributed in this proceeding by its witness Blake, the Staff at first proposed to take the position that Guideline rates *should* be used in computing Midwestern's Federal income tax allowance. In Blake's proposed testimony he premised this position, in part, on the assumption that under the reserve ratio test set forth in U.S. Treasury Department Publication No. 456, Depreciation Guidelines and Rules, Midwestern would be entitled to use the Guideline rate as a matter of right for an absolute minimum of 9 years. He testified that this assumption was predicated on advice he had obtained from Houston, Texas, Internal Revenue Service personnel to the effect that the combined construction cost of both Midwestern's Northern and Southern Systems would be considered by IRS as base year cost. However, Blake subsequently abandoned this position completely, on the ground that on July 10, 1963, the same IRS personnel had advised him that the original information was in error, and that the construction of the Northern System would be considered by IRS to be *additions* to Midwestern's property, rather than part of the base year plant original cost. Blake concluded that on this basis Midwestern would exceed the reserve ratio range in the year 1967, so that in his view the company would be eligible to employ Guideline rates only through the calendar year 1966. (5: 843, 853-5)

---

[*] The instant decision, as noted at an earlier point, adopts a 3.5 percent depreciation rate for computation of Midwestern's depreciation expense allowance, based upon an assumed remaining life of 27 years from December 31, 1962.

Staff's final position on the Guideline rate issue in this proceeding is stated in its initial brief as follows:

> The Company has persistently stated in this proceeding that it does not in good faith, believe that it is eligible to use the guideline rate, that it does not wish to use it, and that it does not intend to use it. We recognize that if the Commission were to compute Midwestern's tax depreciation on the basis of the guideline rates, it might have to claim this rate on its income tax returns in order fully to recover the allowed rate of return. In view of the relatively short period for which the consumers would be assured the benefits of the higher tax depreciation rate, the staff no longer feels justified in putting the Company in a position where it would have to act contrary to its best judgment. In addition while we believe that Mr. Blake's understanding of the nature and operation of the guideline procedure is sound in the light of currently available information, there are no doubt certain areas of uncertainty—such as the question of whether a good-faith belief in the reasonableness of a 22-year life would be necessary—regarding which a prudent person might wish to await further clarification. We emphasize that the position the staff currently takes is based upon the present state of knowledge about the guideline procedure and the publicly announced intention of this particular company not to use the guideline rate. (pp. 54–55)

Under the circumstances, the only party now pressing the position that Guideline rates should be used in computing Midwestern's Federal income tax allowance in the instant proceeding is the City of Chicago, intervenor, whose position was supported by testimony of witness Van Scoyoc, a utility consultant. Adoption of this position would reduce Midwestern's income tax allowance by approximately $1,000,000. (Exh. 55–A)

The City of Chicago contends that as a new company, Midwestern is entitled to use the Guideline life of 22 years throughout the first life cycle of its property, citing the following statement on page 3 of Treasury Publication No. 456.

> New businesses will initially have no reserves against their assets, and it is therefore unlikely that they will have high reserve ratios during the first replacement cycle. As a consequence, new businesses will generally be permitted to use the guideline lives throughout the first replacement cycle. Thereafter, like any other business, they will be permitted to continue use of the guidelines, so long as replacement practice is consistent with the lives used.

Chicago further contends that in any event Midwestern, as a matter of right, would be entitled to use Guideline lives for a period of 3 years without any question whatsoever by the Internal Revenue Service, citing the following statements in Treasury Publication No. 456:

> Any taxpayer who wishes to use the new guideline lives or a life longer than the guidelines, may do so initially as a matter of right and without question by the Internal Revenue Service for a period of 3 years. Use of guidelines will continue to be accepted thereafter unless there are clear indications that the taxpayer's replacement practices do not conform with the depreciation claimed and are not even showing a trend in that direction.
>
> * * * * * * *
>
> Taxpayers who wish to use the new guideline lives or any life longer than the guidelines may do so without challenge for the first 3 years under this Procedure.

It is Chicago's position that Midwestern thus has available an opportunity to reduce its income tax costs by taking advantage of Guideline rates, that it is the obligation of the company to take advantage of such opportunities, and that accordingly its income tax allowance in this proceeding should be computed as if the company had in fact utilized that opportunity. Reliance is here placed upon the principle enunciated in *El Paso Natural Gas Company* v. *F.P.C.*, 281 F. 2d 567 (CA 5), that

> It is the obligation of all regulated public utilities to operate with all reasonable economies. This applies to tax savings as well as economies of management.

Chicago rejects the suggestion that the attempted use of Guideline lives by Midwestern would impose on it the risk of financial detriment. Witness Van Scoyoc testified that even if the Internal Revenue Service should later, upon audit, require that Midwestern's Guideline lives be adjusted upward, the resulting increased tax cost would be offset by a reduction in return and associated income taxes due to the reduction in rate base resulting from book depreciation accruals. Finally, Chicago contends that even if such a claimed risk were realistic, any such risk should be borne by Midwestern since it is afforded an opportunity to earn a reasonable rate of return.

It is of particular interest, in connection with this question, to note that of the 36 natural gas pipeline companies referred to in the FPC Statistics of Natural Gas Companies, only three companies have claimed Guideline lives, and two of those companies have followed deferred tax accounting for the difference in taxes. (11:1579)

In evaluating Chicago's position, it should be noted at the outset that even the 3-year grace period is of doubtful comfort to Midwestern here, since it clearly would appear to commence for all taxpayers with the taxable year 1962, rather than variously with the first year in which any individual taxpayer might see fit to claim Guideline lives. Thus, throughout Treasury Publication No. 456 the 3-year grace period is referred to as "the first three taxable years to which this Revenue Procedure applies." (pp. 23, 25, 27, 28, and 49) There is no statement that a taxpayer may use Guideline lives without challenge "for the first 3 taxable years in which he elects to claim Guideline lives on his tax return." It therefore seems clear that the 3-year "honeymoon" period in any event does not extend beyond the tax year 1964. Once that period expires, there is serious doubt whether Midwestern, under *any* interpretation of the Guideline rules, would be permitted thereafter to use Guideline lives. As noted above, the statement in Treasury Publication No. 456 with respect to the 3-year grace period concludes as follows:

> Use of guidelines will continue to be accepted thereafter *unless there are clear indications that the taxpayer's replacement practices do not conform with the depreciation claimed and are not even showing a trend in that direction.* [Emphasis supplied.]

Furthermore, there is a substantial question whether Midwestern's tax returns would be free from challenge upon audit by the Internal Revenue Service if the company used Guideline lives, *even for the 3-year grace period.* The theme running throughout Treasury Publication No. 456 is that Guideline lives may be utilized only to the extent justified by the taxpayer's actual retirement practices. The opening paragraph (page 1) of Publication No. 456 sets forth the underlying purpose and objective of Revenue Procedure 62–21 as follows:

> * * * It sets forth simpler standards and more objective rules *which will facilitate adoption of rapid equipment replacement practices* in keeping with current and prospective economic conditions. [Emphasis supplied.]

The basic concept of Guideline lives is stated as follows:

> The fundamental concept underlying the new Procedure is that the depreciation claimed will not be disturbed *if the taxpayer's retirement and replacement practices are consistent with the life used.* (p. 4) [Emphasis supplied.]

The same or similar language is repeated some 35 times in Publication No. 456.

The following question and answer on p. 45–46 of Publication No. 456 makes it clear that Guideline lives do not affect the basic approach of the Tax Code, that tax depreciation is based on the *useful life* of property in the taxpayer's own trade or business:

> 3. Question: At present, depreciation is based on the useful life of property in the taxpayer's own trade or business. How does this depreciation reform affect this approach?
>
> Answer: The depreciation reform retains this approach. *Every taxpayer should continue to base his depreciable lives on his own best estimate of the period of their use in his trade or business.* The new reform provides guideline lives, based on analyses of statistical data and engineering studies and assessments of current and prospective technological advances, for each industry in the United States. The guidelines which have been developed are felt to provide reasonable standards for taxpayers in the various industries and if used will be presumed to be acceptable unless subsequent events show that they are not appropriate for a particular taxpayer's circumstances. * * * Thus, under the depreciation reform, depreciation continues to be based on the concept of useful life of property to the taxpayer. However, wider latitude is provided for the taxpayer in making his own best estimate of useful life, and objective standards are provided wherever possible for determining when the taxpayer's estimate should not be disturbed. [Emphasis supplied.]

Of particular interest is the Internal Revenue Service announcement in Technical Information Release TIR–503, issued August 21, 1963, which stated:

> When determining the useful life of his guideline class of assets, the taxpayer should *in good faith* determine his forthcoming practice with respect to retirement and replacement of his assets in the class and *adopt a useful life for the class consistent with his intended retirement and replacement practice*, and then adhere to that practice. (11: 1663) [Emphasis supplied.]

In the face of the above statements in Treasury Publication No. 456, it is difficult to see how it can be asserted with any confidence that Midwestern could in good faith, consistent with the intent and spirit of Revenue Procedure 62–21, use Guideline lives for tax purposes. Midwestern, the Staff, and the City of Chicago all recognize here that a 22-year life is *not* the best estimate of the service life of Midwestern's pipeline. Furthermore, no party contends here that the use of Guideline lives by Midwestern would facilitate adoption by it of "rapid equipment replacement practices."

The final matter to be disposed of in connection with this problem is the view expressed by Chicago witness Van Scoyoc that if Midwestern did claim Guideline lives and the Internal Revenue Service should later disallow this upon audit,

there would be no risk of loss to the company because the resulting liability for back taxes and the sharp increases in taxes which would follow would be more than offset by the reduction in return and related taxes caused by the decline in rate base during such period. A basic flaw in the Van Scoyoc calculations arises from the fact that he assumed *no growth in plant* during the interim. He agreed that if there *were* growth, his assumed offset

> may be more than counterbalanced by additional return and income tax and, of course, that would have to be taken into account. (11: 1552)

The Commission's recent liberalized depreciation decision in *Alabama-Tennessee Natural Gas Co.*, Op. No. 417, *supra*, in adopting a flow-through approach, noted that from 1954 to 1960 natural gas pipelines had increased their gross plant by an average of 11.07 percent each year, and the Commission there concluded that it was reasonable to expect that

> the pattern of growth in demand and plant capacity with respect to Alabama-Tennessee and in the gas pipeline industry generally will continue for the reasonably foreseeable future. (pp. 216–218)

In arriving at this conclusion the Commission noted that witness Van Scoyoc, who testified in the *Alabama-Tennessee* case in support of the flow-through approach, had there testified that "natural gas pipelines were expected to continue their growth indefinitely (Tr. 1192)." (Op. No. 417, p. 217) Under the circumstances, no further comment would seem to be required on this point.

Under the circumstances presented here, where Midwestern actually has *not* used Guideline rates on its income tax returns and states that it does not intend to do so in the future because of its own serious doubts that it could qualify, and where at the very least it must be said that the company's right to use Guideline lives is the subject of serious uncertainty, it is concluded that it would be highly improper for this Commission to evaluate Midwestern's income tax allowance as if it had in fact claimed guideline rates. Accordingly, Midwestern's income tax allowance will here be computed on the basis of a 3.5 percent depreciation rate for tax purposes.

B. *Tax Depreciation for Pipeline Rights-of-Way*

The question presented here is whether Midwestern's Federal income tax allowance should reflect a deduction of $38,353 for depreciation of rights-of-way, as contended by Staff (Exh. 59–A), even though the Internal Revenue Service has rejected this as a proper deduction. The record shows that Midwestern has claimed such a deduction on its tax returns for the calendar year 1962 and for each prior year of its existence. However, in its audit of the 1959, 1960 and 1961 returns the Internal Revenue Service has consistently disallowed the deduction, and as of the date of the instant hearing Midwestern had already paid tax deficiencies for the years 1959 and 1960 as a result of such disallowance.

It is clear that, despite an adverse holding by the Eighth Circuit in *Northern Natural Gas Co.* v. *O'Malley*, 277 F. 2d 128, the Internal Revenue Service still adheres firmly to the position that depreciation on rights-of-way is not a proper deduction for income tax purposes. As already noted, Midwestern has undertaken to preserve its position by claiming the deduction on its returns and paying the deficiencies upon disallowance, but has not challenged the Internal Revenue Service's ruling in the courts.

Staff alleges (initial brief, p. 48) that the Interal Revenue Service position "has been rejected by every court that has passed upon it", citing *Portland General Electric Co.* v. *United States*, 189 F. Supp. 290 (*D. Ore.*) *aff'd*, 310 F. 2d 877

(C.A. 9; *Northern Natural Gas Co.* v. *O'Malley, supra*; and *cf. Union Electric Co.* v. *Commission*, 177 F. 2d 269 (C.A. 8). This staff comment is actually somewhat over-inflated, in view of the fact that two of the cases cited involve *electrical* utilities, where the problem takes on a somewhat different aspect. Actually, the only court decision to date involving a natural gas pipeline company is the *Northern Natural Gas Co.* case, *supra*.

The net effect of the Midwestern experience with the Internal Revenue Service is that Midwestern does not now, and did not in the test year or in prior years have available an *effective* income tax deduction for depreciation of rights-of-way—because although the company has gone through the motions of including the claimed deduction on its tax returns, the Internal Revenue Service has consistently disallowed the deduction and Midwestern has paid tax deficiencies as a result thereof.

Staff, however, contends that this position in which Midwestern finds itself involves a tax expense which Midwestern cannot be said to have "necessarily" incurred, since it had the power "to take some action to resolve the uncertainty," but failed to do so for reasons of its own; that accordingly, if there is any risk of ultimate loss here, Midwestern itself should be the one to bear it. (Initial brief, p. 50) Although the Staff brief does not elaborate its position any further than this, it can be assumed that Staff is here suggesting that if Midwestern had in fact challenged the IRS ruling in its own circuit, the chances are that it would have prevailed; that if this in fact had occurred, there would then have been no basis for failing to reflect the deduction in computing the company's income tax allowance, merely because of the *possibility* that the Supreme Court might conceivably some day uphold the IRS position; that accordingly Midwestern should not be left in a more favorable position here, simply because the company for reasons of its own has elected not to take any court action itself to resolve the uncertainty.

In view of the fact that to this date there has been only one court decision, in another circuit, dealing with this precise question in connection with a natural gas pipeline company, the Staff assumption that Midwestern would necessarily prevail if it were to challenge the IRS ruling in its own circuit is mere speculation. Under all the circumstances, there is some merit in the Midwestern observation that

> * * * it is rather strange for the Staff of one agency of the Government (FPC) to recommend action which, if adopted by the Commission, would force Midwestern to contest the action of another branch of the Government (IRS), particularly since the latter agency (IRS) has primary administrative jurisdiction of the matter (taxes) involved. (Initial brief, p. 60)

It may be true, as suggested by Staff, that if the Internal Revenue Service should ultimately abandon its position, as the result of a Supreme Court decision or otherwise, Midwestern would be in a position to receive refunds for the deficiencies paid in previous years. However, there is no case presently before the Supreme Court involving this question, and it is not suggested that any such case is even presently headed in that direction. Furthermore, no situation has yet arisen establishing a conflict among circuits, which would provide a basis for the Supreme Court to accept jurisdiction.

In view of the above, the only question really presented here is whether the circumstances are such as to warrant including in the instant order a contingent refund condition, providing for a future rate adjustment in the event the Internal Revenue Service should ultimately abandon its position as

the result of a Supreme Court decision or otherwise. It is concluded that the amount of $38,353 (Exh. 59–A) involved under this issue in this proceeding is too small to warrant such treatment, particularly when it is borne in mind that the cost of service adopted herein cannot be regarded as a scientifically precise prediction of future conditions in regard to cost of service and revenues in general. In *Alabama-Tennessee Natural Gas Co.*, 27 FPC 1180, 1193 (1962), where the alleged available deduction for depreciation on rights of way amounted to $14,016, the Commission affirmed the examiner's ruling that no such deduction should be considered in determining the income tax allowance, on the ground that

> * * * we believe the company was justified in refusing to litigate the relatively small amount involved * * *

Midwestern notes that on a per Mcf basis the amount of the deduction here involved, computed at 0.025 cent per Mcf, is far less than it was in *Alabama-Tennessee*, where the per Mcf deduction amounted to 0.125 cent. (Reply brief, p. 57, footnote 16)

Accordingly, the deduction for depreciation of rights-of-way will not be reflected here in computing Midwestern's Federal income tax allowance.

C. *Tax Treatment for Liberalized Depreciation, and Reduction of Tax Rate Under Revenue Act of 1964*

Pending Commission resolution in the *Alabama-Tennessee Natural Gas Co.* case (Docket No. G–5471, *et al.*) of the controverted question of proper treatment of liberalized depreciation in computing the Federal income tax allowance, Staff in the instant proceeding followed the Commission's then current practice of computing the income tax allowance on a normalization basis, including the reserve for deferred taxes in the rate base at a 1.5 percent return. (Exh. 5–B) The Presiding Examiner made it clear during the prehearing conference that the position ultimately adopted by the Commission on this issue in the *Alabama-Tennessee* case would be regarded as controlling for Midwestern in the instant proceeding. It was also made clear, however, that evidence purporting to show that there was something particular about the operations of Midwestern differentiating it from Alabama-Tennessee, or from other pipeline companies in general, would be regarded as relevant. (7: 1092) Despite this, Midwestern made no contention during the instant hearing or in its briefs that any such relevant distinction exists. Instead, Midwestern confined its position on this issue to the comment (reply brief, p. 55) that:

> * * * Midwestern maintains that any treatment of deferred taxes which directly or indirectly denies Midwestern the full benefits of utilizing Section 167 of the Code is unlawful and contrary to Congressional intent.

The liberalized depreciation issue has since been resolved by the Commission in its Op. No. 417 decision in the *Alabama-Tennessee* case, issued February 3, 1964. The Commission there re-examined its previous policy of basing income tax allowances for a company paying taxes calculated under liberalized depreciation on the deductions available under straight-line depreciation, and concluded that

> * * * there is no present factual justification for thus normalizing the prospective rates of Alabama-Tennessee and other natural gas companies similarly situated *so that such rates should reflect only the actual taxes currently payable during the applicable test year.* * * * (p. 221) [Emphasis supplied.]

In reaching this conclusion the Commission held that:

> * * * normalization is premature and unnecessary as long as there is growth in the size of the dollar investment in gross plant (caused by either increasing demand or higher construction costs). (p. 216)
>
> * * * * * * * *
>
> * * * we believe that it is reasonable to conclude that the pattern of growth in demand and plant capacity with respect to Alabama-Tennessee *and in the gas pipeline industry generally* will continue for the reasonably foreseeable future. (*Supra*, p. 218) [Emphasis supplied.]

In a motion filed March 30, 1964, Staff proposes that pursuant to Op. No. 417, *supra*, Midwestern's Federal income tax allowance should be recalculated here to reflect the flowing through of the tax benefits resulting from the use of liberalized depreciation, and to further reflect reduction of the Federal income tax rate from 52 percent to 50 percent under the Revenue Act of 1964. The motion also proposes a further adjustment in the future to reflect the further reduction of the tax rate from 50 percent to 48 percent for the year 1965 and thereafter, under the terms of the Revenue Act of 1964.

For reasons which will be set forth in detail below, it is concluded that Midwestern's Federal income tax allowance should be calculated on the basis of actual tax liability, reflecting the liberalized depreciation deduction which the company uses on its tax returns. In addition, since the rates fixed in this decision are to be effective only for the future, it is concluded that the income tax allowance should be computed on the basis of the new 50 percent tax rate. The Midwestern answer, filed April 6, 1964, states that the company has no objection to reflecting the reduction in the corporate income tax rate from 52 percent to 50 percent in the instant cost of service. The net result of these adjustments is to reduce the Federal income tax allowance to zero. Under the circumstances, the further reduction of the tax rate to 48 percent commencing with the 1965 tax year becomes academic for the purpose of this decision.

The Midwestern answer on a number of different grounds, strongly opposes the Staff proposal that the cost of service and rates to be determined herein should be adjusted to give immediate effect to the Commission's holding in Op. No. 417, with respect to flowing through of the tax benefits resulting from the use of liberalized depreciation. Midwestern requests that the Staff motion be denied; that a decision on the liberalized depreciation issue herein be held in abeyance pending completion of rehearing and review of Op. No. 417; that, in the event Op. No. 417 is ultimately affirmed, Midwestern be given a reasonable opportunity thereafter to advise the Commission as to whether it will continue to utilize liberalized depreciation; and that if the Staff's motion to "reopen the record" is granted, the company should be given a reasonable opportunity to present evidence with respect to this matter.

Clearly, the question as to the proper treatment of the liberalized depreciation deduction in computing Midwestern's Federal income tax allowance constitutes one of the most important and substantial issues in this case, making a difference of close to $2 million in the total cost of service, and that issue requires responsible treatment in the instant initial decision.

At the outset of this discussion it will be useful to eliminate a "straw man" by noting that although the Staff motion is couched in terms of a request to "reopen the record" in order to receive Exhibit A attached thereto, showing the required recalculation, the Staff motion actually does *not* involve or require the presentation of any additional evidence at all. As shown by Exh. A, Sheet 1, of the Staff motion, in order to reflect the flowing through of the tax benefits

resulting from the use of liberalized depreciation, Staff has merely computed the excess of liberalized depreciation over straight-line depreciation by substituting in its Exh. 3, Sch. 4A, calculations the 3.5 percent and 7.0 percent depreciation rates actually used by Midwestern on its tax returns for the test year. It is thus clear that there is required here only a simple mathematical calculation, and not any "reopening of the record" for the introduction of new evidence.

The Midwestern answer of April 6 contends that the Staff motion fails to take into account the fact that the Commission's *Alabama-Tennessee* decision, Op. No. 417, was not yet final, noting that the Commission on April 3, 1964, 31 FPC 768, had issued an "Order Granting Rehearing For Further Consideration." However, since the filing of the Midwestern answer, the Commission on April 15, 1964 has issued Op. No. 417–A, Opinion and Order Denying Rehearing and Stay, 31 FPC 928. Under the circumstances, Op. No. 417 has now become the final, controlling decision of the Commission, and it is determinative of the liberalized depreciation issue in the instant proceeding.

Midwestern further argues that the Staff motion fails to take into account the question of whether it will *continue* to elect to utilize liberalized depreciation in the future, and that the outcome of Op. No. 417 will have an important bearing on this matter. Midwestern accordingly requests that a decision with respect to the liberalized depreciation issue herein be held in abeyance pending completion of rehearing and judicial review of Op. No. 417, and that in the event of affirmance Midwestern be given a reasonable period thereafter to advise the Commission whether it will continue to elect to utilize liberalized depreciation.

This Midwestern position assumes that if the company for reasons of its own were to elect to discontinue claiming a tax deduction which the Internal Revenue Code admittedly authorizes, it would be improper for the Commission to thereafter compute the company's income tax allowance as if it were in fact continuing to take the deduction. This assumption ignores the basic regulatory principle that a regulated public utility is required to utilize available cost-savings opportunities. *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567, 573 (CA5, 1960).

However, it is unnecessary to decide that particular question here, since it is concluded that the controlling fact for the purpose of the instant decision is that Midwestern *did* utilize liberalized depreciation on its tax returns during the test period. It would be pure speculation to attempt to guess what course Midwestern might take with respect to this matter at some future date, when judicial review of Op. No. 417 is completed. It is interesting to note that Midwestern itself, while making the above argument, carefully avoids any prediction that it would necessarily discontinue using the liberalized depreciation deduction on its tax returns in the event of affirmance.

Midwestern finally contends that it has not had adequate opportunity to make a record on the liberalized depreciation issue in this case because

> * * * the Examiner deemed it infeasible to have a full scale hearing on the liberalized depreciation issue in this proceeding.

Midwestern accordingly urges that if the instant record is to be "reopened" pursuant to the Staff motion, it should be given a reasonable opportunity to present evidence with respect to this issue and to show why the principles enunciated in Op. No. 417 should not be deemed applicable to Midwestern.

In order to keep this argument in perspective, it is important first to note, as explained at the outset of this discussion, that the record is *not* here being

"reopened" for the introduction of new evidence at all. It is concluded that the instant Midwestern request for an "adequate opportunity" to make a record on the liberalized depreciation issue in this case comes far too late, in view of the manner in which Midwestern counsel treated this matter throughout the hearing, and is not entitled to serious consideration at this stage. The relevant procedural history is summarized below:

1) In the course of a discussion of all the controverted issues in this case, during a prehearing conference held in the opening stage, the Presiding Examiner requested Midwestern counsel to state how the company intended to treat the liberalized depreciation deduction in computing its proposed Federal income tax allowance. The following colloquy then ensued:

> Mr. WERNER: I don't know. All I can say, Mr. Examiner, whichever way the Commission is going to go for everybody else, I assume it would go for us. * * *
>
> PRESIDING EXAMINER: In what case is it now pending before the Commission?
>
> Mr. WERNER. The Alabama-Tennessee case involved the whole liberalized issue.
>
> PRESIDING EXAMINER: * * * Are you suggesting that as far as Midwestern is concerned, you do not intend to make a full scale presentation on that issue, but will take the position that whatever should be the ultimate holding of the Commission on that issue for pipelines subsequently you would expect to apply to Midwestern?
>
> Mr. WERNER: I didn't mean to say, really, that. I merely indicated that whatever we do, we will have to be bound by what the Commission eventually does. (2:251-2)

2) During the hearing, City of Chicago witness Van Scoyoc made the same major evidentiary presentation with respect to the liberalized depreciation issue (Exh. 22-24; 3:394-428) which he had previously presented in the *Alabama-Tennessee* case, *supra*, as a witness for the Tennessee Valley Municipal Gas Association. (Op. No. 417, pp. 214-217) When the Van Scoyoc prepared testimony was copied into the transcript, the Presiding Examiner stated:

> * * * I would not expect that there would be any cross-examination of the witness Van Scoyoc designed toward testing the general philosophy of his presentation because * * * that issue has been orally argued before the Commission in the Alabama-Tennessee case, and it will be decided by them in this case.
>
> I am aware of the fact that Midwestern counsel indicated this morning that *he may wish to interrogate witness Van Scoyoc on questions relating to any alleged differences between the operating factors of Midwestern as distinguished from other pipeline companies. I would regard that as being of a different category.* (3:663) [Emphasis supplied.]

At a later session, during cross-examination of Van Scoyoc by Midwestern counsel, the Presiding Examiner again stated that he did not desire

> any interrogation of Mr. Van Scoyoc in this hearing *on any questions of that general nature going to the validity of the general position.*

in view of the fact that the *basic general question* was pending before the Commission in the *Alabama-Tennessee* case. (7:1090-91) However, the Presiding Examiner at the same time made it clear that he *would* permit interrogation relating to *distinguishing characteristics*, if any, between the Midwestern operations and those of Alabama-Tennessee, stating:

Now, I think I made it clear at an earlier session that the only type of interrogation of Mr. Van Scoyoc which I would regard as useful in this proceeding would be if any questions were raised as to whether there was something particular about the operations of Midwestern that differentiates it in connection with problems involved in this issue from other pipeline companies in general.

So you might want to make a record conceivably as a basis for argument that even though the Commission should, for the purpose of this discussion, ultimately hold that in the Alabama-Tennessee Case, that the liberalized depreciation deduction should be reflected in computing the income tax component, you might want on the basis of this record about Midwestern's operations, that this case is distinguishable. That is the only type of interrogation I would permit. (7:1092)

It is important to note that at no time during the prehearing conferences or the hearing itself did Midwestern counsel express any objection to the Presiding Examiner's ruling that he would not permit interrogation of witness Van Scoyoc on questions of a *general nature* going to the validity of his general position on the liberalized depreciation issue. It is of equal importance to note that although the Presiding Examiner made it clear that Midwestern *would* be provided with a full opportunity to establish that there was in fact a relevant and material distinction between the operations of Midwestern on the one hand, and those of Alabama-Tennessee and other pipeline companies in general, requiring or justifying a different treatment for Midwestern, Midwestern counsel elected not to pursue this matter in the hearing.

In view of this history the suggestion by Midwestern, in its instant answer to the Staff motion, that it has not had an adequate opportunity to make a record on the liberalized depreciation issue in this case comes too late. Furthermore, in view of the above history it is particularly surprising to now find Midwestern, for the very first time in the instant proceeding, making contentions in its answer to the Staff motion that there are distinguishing characteristics between its operations and those of Alabama-Tennessee and most other pipelines—*i.e.*, that Midwestern is unique in that virtually its entire plant has already been subject to liberalized tax depreciation, and that accordingly the risks related to utilizing liberalized depreciation under the flow through theory are relatively much greater for Midwestern than for other pipelines; that due to this fact and the alleged relative lack of plant growth since initial construction, there has been a rapid decline in the deduction available to Midwestern for liberalized depreciation; that accordingly, even assuming that the flow through theory is ultimately held valid, it would be erroneous to use Midwestern's test year deduction for liberalized depreciation, since it is allegedly not representative of the future. (Midwestern answer, p. 7–8)

Midwestern had every opportunity to make such contentions with respect to its alleged distinguishing characteristics and to present supporting evidence thereon during the instant hearing. Having failed to avail itself of this opportunity during the hearing, its instant request comes too late and must be denied.

In addition to its proposal that Midwestern's Federal income tax allowance should be recalculated to reflect the flowing through of the tax benefits resulting from the use of liberalized depreciation, the Staff motion further contends that Op. No. 417 requires a reduction of the Midwestern *rate base* by an amount equal to the accumulated deferred taxes set out in Account No. 282. However, because the instant record does not show deferred taxes accrued subsequent to December 31, 1962, Staff has merely set forth (Exh. A, Sch. 4 of Motion) certain

computations offered "only as an example of the calculations required to reduce Midwestern's rate base and the return component of the cost of service consistent with Opinion No. 417." (p. 2) While offering these calculations for informational purposes, the motion states that Staff nevertheless

> does not propose to change any other component in the cost-of-service as set out in Exhibit 55–A. In fact, to alleviate any controversy, Staff reaffirms its position with respect to such components and the testimony relating thereto. (p. 2)

The Midwestern answer argues, on various grounds, that it would clearly be erroneous to deduct the accumulated deferred tax reserve from its rate base. (p. 6–10) It is here concluded, as Staff seems to agree, that no useful public interest purpose would be served by injecting this particular controversy into the instant case at this late stage of the proceeding.[29]

VI. State Ad Valorem Taxes

Staff witness Parks orginally proposed an allowance of $1,205,046 for state ad valorem taxes, which Midwestern witness Massey adjusted upward by $102,510. (Exh. 25, Sch. 6.2) Subsequently, on rebuttal Parks increased Staff's proposed allowance by a net amount of $26,727 (Exh. 55, Sch. 1; Exh. 55-A), and Staff's initial brief thereafter made another upward adjustment of $9,899 (p. 57, footnote 17), so that the amount now in dispute is $65,884. Midwestern's initial brief (p. 61) by a table in footnote 38, shows how the original aggregate difference between the Staff and the company is broken down by states, and it is clear that the major part of the dollar difference lies in the figures used for the Minnesota and Wisconsin ad valorem taxes. The basic difference between the two approaches is that Staff witness Parks used the latest available actual assessments and rates as of the time of his presentation, whereas Midwestern witness Massey reflected anticipated increases in assessments or rates for the calendar year 1963.

With respect to Minnesota, Massey proposed an ad valorem tax allowance of $678,996, as compared with the actual 1962 tax bill of $638,082. He based this on an agreement reached with the Minnesota Department of Taxation during negotiation of the 1962 assessment that a further 2½ percent increase in assessed value would be applied in 1963 on Midwestern's pipeline property, plus an estimated 5 percent increase in *tax rates* based on the historical pattern of average annual increases since 1957. (3: 548–9) Staff witness Parks' final proposed allowance for Minnesota ad valorem tax was $646,859. (Midwestern initial brief, p. 61. footnote 38; p. 62, footnote 39)

With respect to Wisconsin Massey proposed an ad valorem tax allowance of $251,750, based upon an estimated 5 cent per hundred increase in the tax rate for 1963, as compared with 1962, and an estimated $800,000 increase in the 1963 assessment. (Exh. 25, Sch. 6.2; 3: 549) Midwestern proposed no upward adjustment in this recommended allowance, in spite of the fact that the record showed that the Wisconsin Department of Taxation had advised by letter of June 28, 1963, that the 1963 tax rate applicable to Midwestern would actually be approximately 6 cents more per hundred dollars of assessed value than the tax rate assumed in Massey's recommendation; and in spite of evidence that

---

[29] As earlier noted in the discussion of the *rate of return* issue, however, Op. No. 417 does require that Deferred Federal Income Tax be included in Midwestern's capitalization, for the purpose of the rate of return computation, at a zero cost in place of the 1.5 percent cost reflected in Staff's Exh. 5–B.

the Wisconsin taxing authorities had recently determined the 1963 assessed value of Midwestern's property at a level $111,350 higher than the assessed value assumed in the Massey recommendation. (11: 1679–80) Staff's final recommended allowance for Wisconsin ad valorem tax was $236,118. (Midwestern initial brief, p 61, footnote 38; Staff initial brief, p. 57, footnote 17)

Staff's initial brief sensibly suggests that there is no purpose in speculating about the level of Midwestern's 1963 ad valorem taxes for Minnesota and Wisconsin in the event that information as to the *actual* 1963 ad valorem taxes should become available prior to the decision in this case; and that

> The staff would have no objection to a procedure whereby the record could automatically be reopened so that the Examiner or the Commission could take official notice of any increases in state tax rates which constitute material changes from the rates used in staff cost of service. (p. 58)

The information with respect to Minnesota and Wisconsin ad valorem taxes actually paid by Midwestern for 1963 has in fact now become available—amounting to $666,154 for Minnesota, and $261,098 for Wisconsin. The Presiding Examiner takes administrative notice of these facts, and on this basis it is concluded that an allowance of $666,154 should here be adopted for Midwestern's Minnesota ad valorem tax.

The Wisconsin ad valorem tax presents a somewhat different problem. Staff agrees that the 1963 increase in the Wisconsin ad valorem *tax rate* should be reflected here. However, Staff contends that the *assessed value* actually adopted for Midwestern's property by Wisconsin taxing authorities for 1963 should *not* be used here. The rationale advanced in support of this position is that assessed value in Wisconsin is arrived at by an averaging of undepreciated cost of plant, plus capitalization of net operating income at 7 percent; that in Midwestern witness Massey's original testimony his estimate of an anticipated increase in the 1963 Wisconsin assessment was based upon the fact that the company's test-year revenues were over $1,000,000 higher than those upon which prior assessed values had been based; that if Staff's position should be sustained on any substantial part of the issues in this proceeding, such "excess revenues" would be greatly reduced, and it would therefore follow that the Wisconsin assessment would subsequently be reduced accordingly. Staff concludes that it would not be appropriate here to normalize Midwestern's test-year ad valorem tax liability to reflect increased 1963 expenses "which arise solely from the fact that the company earned more money than it should have"; that

> Therefore, unless Midwestern can demonstrate that the increase in Wisconsin assessed value was not due to the capitalization of net income formula, no normalization should be made. (Initial brief, p. 58–59)

Although there is some merit in this Staff contention, there is no precise way to measure at this time the impact which the rates fixed for Midwestern in this case will have upon the Wisconsin assessment in the future. As already noted above, Midwestern throughout the hearing and in its instant briefs has adhered to a recommended allowance for Wisconsin taxes of $251,750 despite its information, placed in the record by its witness Massey, that the actual 1963 ad valorem tax would be in the area of $261,000, approximately $9,350 higher than its recommended figure. Under all the circumstances, this $9,350 difference may fairly be regarded as a cushion providing some margin for the possibility that the Wisconsin assessment may subsequently be reduced as a result of the impact of the instant decision. Accordingly, the $251,750 Wisconsin ad valorem tax allowance previously recommended by Midwestern is adopted for the purpose of this decision.

The ad valorem tax allowances recommended by Midwestern for the other states involved are regarded as adequately supported by the record, and are hereby adopted as follows: (1) Illinois—$114,000; (2) Indiana—$148,001; (3) Kentucky—$78,750; (4) North Dakota—$59; (5) Tennessee—$36,000.

As a result of the above, the total allowance approved for state ad valorem taxes in the Midwestern cost of service is $1,294,714.

VII. Revenues

A. *Volume of Sales to Michigan Wisconsin*

On the matter of determining appropriate sales volumes to use in the normalized test year, for the purpose of testing the reasonableness of Midwestern's existing rates, Staff here takes the position that test year sales volumes should be normalized to take account of the most recent customer estimates of their purchases during calendar year 1963. Staff notes that a substantial portion of the service on Midwestern's Northern System is rendered, either directly or indirectly through Michigan Wisconsin Pipe Line Co. (Michigan Wisconsin), in areas which were not previously supplied with natural gas; that Northern System service began in the fall of 1960, and that the test year ending June 30, 1962 accordingly plainly falls within the developmental period which pipelines almost invariably experience when natural gas is first introduced into an area;[30] that since the rates to be fixed in the instant proceeding are for the future, the sales volumes employed should be representative of what may be expected as the company leaves the developmental stage and advances toward maturity.

The major subject of controversy with regard to estimated revenues concerns the volume of gas attributable to Michigan Wisconsin's purchases from Midwestern on its Northern System, under Midwestern's CD–2 rate schedule. The revenues related to the volumes in dispute amount to $2,073,141. (Exh. 57, sch. 2–A)

At the outset it should be noted that the function of the instant Sec. 5(a) decision is to fix Midwestern's rates for the future, prospectively from the instant date. A reasonable and meaningful estimate of representative volumes which Michigan Wisconsin may be expected to take from Midwestern in 1964 and succeeding years involves two calculations: (1) the volumes to be purchased during the five winter peak months of November through March, and (2) the volumes to be purchased during the seven off-peak months of April through October.

Michigan Wisconsin witness Browning, Manager of its Marketing and Forecasting Department, concluded that on a year-in-year-out basis the normalized purchases of that company from Midwestern during the five winter peak months would be the average daily contract demand of 158,000 Mcf per day (at 100 percent load factor). His use of 100 percent of contract demand for the winter peak period was based upon his analysis of the historical pattern of Michigan Wisconsin's purchases since the commencement of service on the Midwestern system and his judgment with respect to Michigan Wisconsin's requirements for the future, Browning's Exh. 58 shows that except for two months, November and December, 1961, Michigan Wisconsin's average purchases from Midwestern

[30] Midwestern's prospectus of June 6, 1960, filed in connection with the sale of its first mortgage bonds, stated: "The area to be served by the Company's Northern System is largely without natural gas service, and the development of a demand for natural gas may take some time." (p. 3)

during each of the months November through March have at the minimum closely approached the contract demand of 158,000 Mcf per day. Moreover, in more than half of the months the average purchases have substantially exceeded the contract demand. On the overall, Michigan Wisconsin's purchases have averaged 162,300 Mcf daily during the winter period. (7:1103)

Browning further concluded that the normalized purchases of Michigan Wisconsin from Midwestern during the seven off-peak months of April through October would be the minimum contract volumes, it being reasonably assumed that Michigan Wisconsin would never place itself in a position where it would be paying for gas not taken. On the basis of the minimum contract quantity of 75 percent, which was in effect at the time of Browning's testimony, amounting to 118,500 Mcf per day, he concluded that Michigan Wisconsin's normalized future annual purchases from Midwestern would amount to 49,217,000 Mcf. (Exh. 58, Col. 10) However, assuming that Midwestern should exercise its contractual right to file for an increase in the minimum monthly bill from 75 percent to 87.5 percent, Browning estimated that Michigan Wisconsin's normalized future annual purchases from Midwestern would amount to 53,443,500 Mcf, based on a contract minimum of 138,250 Mcf per day. (Exh. 58, col. 11; 7:1103-4)

Subsequent to Browning's testimony, Midwestern on September 13, 1963, filed revised tariff sheets increasing the monthly minimum bill from 75 percent to 87.5 percent under its CD-2 Rate Schedule. By order issued October 14, 1963, in Docket No. RP64-8, Midwestern's filing was suspended for 1 day and was thereafter permitted to go into effect, subject to refund, as of October 16, 1963. The question whether Midwestern's shift to an 87.5 percent minimum bill should be approved by the Commission is now being litigated in that proceeding, and the Staff is there taking the position that it should *not* be allowed.

In the context of the above facts Midwestern on the one hand, and the Staff and Michigan Wisconsin on the other hand, take conflicting positions as to the volume of gas which should be attributed in this proceeding to Michigan Wisconsin's purchases from Midwestern on its Northern System. Midwestern insists that the most reliable figure in the instant record is an original estimate of 44,773,250 Mcf which Michigan Wisconsin submitted to Midwestern in November 1962 as its "latest available estimate" *for the 1963 calendar year.*

Staff witness Goyne, after using the 44.7 million Mcf figure in his case-in-chief presentation, adjusted his estimate upward in his rebuttal presentation by 8,226,750 Mcf to a total of 53,000,000 Mcf. This revised figure was based upon a letter dated May 27, 1963, addressed to Staff by Michigan Wisconsin witness Browning, in response to a Staff request that it be supplied with the latest estimate furnished to Midwestern "covering purchases for the year 1963." In that letter (4:790) Michigan Wisconsin stated that in response to a February 19, 1963 call from Midwestern requesting an estimate of its purchases *for the year 1963*, Michigan Wisconsin had advised that it was contemplating the purchase of "about 53 million Mcf annually." The letter further stated:

> You also requested further information relative to normalized purchases from Midwestern *for the future.* In this regard, assuming an increase in Midwestern's minimum bill provision to 87½ percent, Michigan-Wisconsin contemplates the purchase in the future of about 53.4 billion cubic feet annually. (4:790) [Emphasis supplied.]

Although witness Browning's responses at various stages of his cross-examination presented a sometimes muddy and confusing picture, the following clear facts finally emerged:

1) Browning's estimate of a 53 million Mcf take for the year 1963 in his letter of May 27, 1963 was based *"on certain conditions in 1963."* (7:1112, lines 19–22)[21]

2) However, *on a year-in and year-out basis after 1963*, assuming that the minimum bill provision remained at 75 percent, it was his judgment that Michigan Wisconsin would actually be taking not 53 million Mcf per year, but rather the 49.2 million Mcf figure shown in Col. 10 of his Exh. 58. (7:1105–6; 7:1113, lines 8–16)

3) His reference to takes at the 53 million Mcf annual volume *in the future* was tied to the assumption that Midwestern's minimum bill would increase to 87.5 percent commencing October 15, 1963. (7:1104; 7:1115, line 17—1116, line 3)

At the end of this colloquy, Michigan Wisconsin counsel Shannon volunteered to make a statement to clear up any remaining confusion (7:1116, line 6), and the following then occurred:

> Mr. SHANNON: That is right. We will never be in a position where we pay for gas that we don't take, but in connection with the next expansion program, the company will have to sit down and decide one of several points, including the possibility of cutting Midwestern back to the minimum, whatever minimum that is, because there will be pipeline supply, there will be a question of comparative cost.
>
> PRESIDING EXAMINER: What you are really saying, Mr. Shannon, I take it, is that any effort to draw any firm conclusions here as to what the actual volumes above the minimum volumes might be in any area following '64 would really be quite unrealistic?
>
> Mr. SHANNON: I think that is correct. I think Mr. Browning is in a position to tell you what his best estimate is in '63, but in 1964 I don't know what the expansion will be because the program hasn't been decided. (7:1116–1118)

As already noted above, witness Browning concluded that the normalized purchases of Michigan Wisconsin from Midwestern during the five winter peak months would be the average daily *contract demand* (at 100 percent load factor) of 158,000 Mcf per day, on a year-in-year-out basis. Midwestern argues that Michigan Wisconsin's monthly takes, *winter* as well as summer, should be estimated on the basis of the 75 percent *minimum* contract volumes; that the question whether Michigan Wisconsin's future winter takes from Midwestern will be above *minimums* depends, *inter alia*, upon still unformulated expansion plans of Michigan Wisconsin, and upon the availability of gas to it from its other suppliers, since Midwestern unquestionably constitutes Michigan Wisconsin's most expensive source of gas. (7:1106)

These arguments are not persuasive in view of the evidence presented by Michigan Wisconsin's witness Browning (Exh. 58) as to the historical pattern of Michigan Wisconsin's purchases from Midwestern since the inception of service on the Midwestern system. Accordingly, it is concluded here that for the purpose of the instant proceeding Michigan Wisconsin's takes from Midwestern during the five winter peak months should be estimated at 23,858,000 Mcf, based on an assumed purchase of contract demand throughout the winter period.

As also noted above, Michigan Wisconsin witness Browning concluded that his company's year-in-year-out takes from Midwestern during the seven off-peak

---

[21] For example, during the winter months of January, February and March 1963, Michigan Wisconsin experienced unusually cold weather, with the degree day deficiencies in its service area averaging more than 10 percent above normal. This unusually cold weather imposed substantial additional requirements upon Michigan Wisconsin's system. (8:1279)

months would be at the level of the *minimum* contract volumes, with the result that estimated annual takes would amount to 49.2 million Mcf if the 75 percent minimum bill provision were retained, and 53.4 million Mcf in the event the 87.5 percent minimum bill were approved.

Curiously, however, we now find Michigan Wisconsin itself (in its reply brief) taking the position that even if the 87.5 percent minimum bill should *not* be approved by the Commission, 53 million Mcf would still be a reasonable estimate of Michigan Wisconsin's annual takes from Midwestern for the purpose of this proceeding. (pp. 5–8) Michigan Wisconsin bases this position upon recent Commission approval of a Michigan Wisconsin expansion program in Docket No. CP63–230, *et al.* (Commission order of November 12, 1963, 30 FPC 1239), and other developments which it cites as "necessarily" resulting in "a substantial increase in the firm requirements on Michigan Wisconsin's system." The current Michigan Wisconsin argument, however, completely ignores and overlooks the statement which its counsel Shannon volunteered on the record at the conclusion of witness Browning's interrogation, when Shannon referred expressly to the very same Michigan Wisconsin expansion programs, and then emphasized that even if these expansion programs were approved, there were still other factors which Michigan Wisconsin would have to consider at the appropriate time in determining whether and to what extent such expanded requirements would be satisfied by increasing the Michigan Wisconsin takes *from Midwestern*. (7:1116–8)[22]

Under all the circumstances it is concluded that this particular Michigan Wisconsin contention is not entitled to serious consideration here, and that the proper volume of gas to be attributed in this proceeding to Michigan Wisconsin's purchases from Midwestern is either 49,217,000 Mcf or 53,443,500 Mcf—depending upon whether Midwestern's 75 percent minimum bill provision is retained, or the change to an 87.5 percent minimum bill is approved in the pending *Midwestern* proceeding in Docket RP64–8.

The final problem to be resolved here accordingly is primarily a procedural one, resulting from the fact that Midwestern's attempt to shift to the 87.5 percent minimum bill provision is being opposed by the Staff in RP64–8, and that case is still undecided as of this date.[23] On this problem Midwestern takes a rigid position that the impact of its change to the 87.5 percent minimum bill provision is not involved in the instant proceeding, on the ground that the Commission has made that question the subject of a separate proceeding in Docket No. RP64–8. Under these circumstances, Midwestern contends that the effect of the 87.5 percent minimum bill provision, if finally approved by the Commission, must be left to determination in the other case.

The Staff, on the other hand, contends that the controlling fact here is that the 87.5 percent minimum bill has now become a reality, since the Commission by order of October 14, 1963, in Docket RP64–8 permitted it to go into effect, subject to refund, as of October 16, 1963. Staff notes that at least until a final decision is issued in RP64–8, Michigan-Wisconsin will undoubtedly purchase gas at no less than 87.5 percent load factor, in view of its general policy against placing itself in a position where it would be paying for gas not taken.[24] Staff

[22] Including the comparative cost of available supplies from other pipelines.

[23] The hearing in RP64–8 concluded on February 25, 1964, and the case is now awaiting initial decision by the Presiding Examiner.

[24] Michigan-Wisconsin states categorically in its reply brief (p. 5) that even if the 87.5 percent minimum bill were ultimately disallowed in RP64–8, this would not result in any refund to Michigan-Wisconsin for the reason that there is "not even a remote possibility" that its purchases from Midwestern during the interim period would be at less than the minimum monthly volume.

accordingly contends that in order to avoid a windfall to Midwestern the only reasonable course in the instant proceeding would be to predicate normalized purchases of Michigan-Wisconsin on the 87.5 percent minimum bill. Staff suggests that Midwestern's rights would be fully protected under this proposal, because if the 87.5 percent minimum bill should ultimately be disapproved in Docket RP64–8, the Commission would have Midwestern's rates before it *in that case* and would be able to consider what adjustments, if any, would need to be made at that time in the Northern System rates fixed for Midwestern in our instant proceeding, in order to permit Midwestern to recover its full cost of service.

The dilemma presented here is that if Midwestern's rates were fixed in the instant decision on the basis of assumed Michigan Wisconsin takes in the amount of 49.2 million Mcf, and if the Commission subsequently should approve the 87.5 percent minimum bill in RP64–8, there would clearly be a resultant windfall to Midwestern as pointed out by the Staff. On the other hand, however, it is to be noted that if Midwestern's rates are here fixed on the basis of assumed Michigan Wisconsin takes in the amount of 53.4 million Mcf, reflecting the 87.5 percent minimum bill, and if the Commission should subsequently disallow the 87.5 percent minimum bill in RP64–8, the technique suggested by Staff, *supra*, would require the Commission *in that proceeding* to order an *increase* in Midwestern's rates above the level fixed in the instant decision—and this would be in spite of the fact that none of Midwestern's customers are parties to the RP64–8 proceeding, which involves only the limited issue of Midwestern's 87.5 percent minimum bill.

Under the circumstances, it is concluded that any adjustment required to deal with this particular problem should be accomplished under the terms of the order to be issued *in the instant case*. Accordingly, in order to avoid any unnecessary windfall to Midwestern, while still protecting that company against any unjustifiable loss in the event the 87.5 percent minimum bill should be disallowed in RP64–8, Midwestern's rates in the instant case will be determined upon the basis of assumed Michigan Wisconsin takes in the amount of 49,217,000 Mcf.[35] However, the instant order will include a contingent refund condition requiring Midwestern, in the event the Commission's final decision in RP64–8 should approve the 87.5 percent minimum bill, to promptly file substitute tariff sheets reducing the rates adopted in the instant decision to the level required to reflect Michigan Wisconsin takes at the level of 53.4 million Mcf. The contingent refund condition will further require Midwestern, under such circumstances, to promptly refund to its customers, for the period from the date of the instant decision to the filing of such substitute tariff sheets, any excess revenues collected under the instant decision reflecting the difference between the 49.2 million Mcf sales volume here assumed on the basis of the 75 percent minimum bill and the 53.4 million Mcf sales volume estimated on the basis of the 87.5 percent minimum bill. The order will further provide that in the event the 87.5 percent minimum bill provision should be disallowed by the Commission's final decision in Docket No. RP64–8, Midwestern will thereafter make similar refunds to its customers for the period from the date of the instant decision to the date of the final decision in RP64–8.

Midwestern's initial brief notes in passing (p. 10) that if effect *is* to be given to the 87.5 percent minimum bill in the instant decision, then fairness requires

[35] The use of this volume in place of Staff's estimated volume of 53,000,000 Mcf requires a corresponding downward adjustment in Staff's purchased gas cost and compressor station fuel cost. The net result is that although use of the 49.2 million Mcf reduces Staff's proposed total revenue figure by $985,498, it also decreases Staff's recommended cost of service by $747,233.

that there also be taken into account the increase, effective December 15, 1963, in Midwestern's take-or-pay obligations to Trans-Canada to a 95 percent annual load factor, which was the basis for Midwestern's shift to the 87.5 percent minimum bill. However, it is to be noted that Midwestern made no effort in the instant proceeding to show what, if any, the impact of the Trans-Canada 95 percent take-or-pay requirement might be if the 87.5 percent minimum bill is approved, and the matter is not further referred to in Midwestern's instant reply brief.[20] Furthermore, it is of interest to note that in the RP64–8 hearing Midwestern witness O. H. Simonds, Jr., was asked by his own counsel to state whether in the event the 87.5 percent minimum bill should be approved Midwestern would have any objection to the fixing of its rates on a basis which recognized sales consistent therewith. The Midwestern witness answered that there would be *no objection*, and he offered no suggestion or *caveat* at that point that under the circumstances it would be necessary to reflect a counterbalancing upward adjustment in Midwestern's purchased gas costs as a result of the Trans-Canada 95 percent take-or-pay provision. (RP64–8, Vol. 4, Tr. 292–3) Under all these circumstances, it is concluded that the Trans-Canada 95 percent take-or-pay provision does not militate against the contingent refund condition technique here adopted.

B. *Unaccounted-for Loss or Gain*

Midwestern in the test year sold (and charged for) a greater volume of gas than it actually purchased. The Staff computed this unaccounted-for gain for the test year by relating the known categories of gas consumption to the known volume of purchases. Staff witness Goyne determined that the unaccounted-for gain of the test year was representative of Midwestern's historical pattern of unaccounted-for losses and gains, and he accordingly extended the test year experience to represent the normalized test year. (1:56; Exh. 2, Sch. 3) Midwestern, on the other hand, assumes that its normal pattern *in the future* will be an overall unaccounted-for loss due to pipeline leakage. Midwestern has accordingly adjusted its actual test year experience to reflect an unaccounted-for loss amounting to 0.3 percent of total deliveries, including company-used gas. (Exh. 25, Sch. 2, column 13; 3:611) The amount in dispute here is $136,683.

Unaccounted-for loss on a pipeline system results, among other things, from leakages. In the case of unaccounted-for gain, however, it is conceded that a pipeline cannot manufacture or gain gas as a physical matter, so as to deliver more gas to its customers than was actually received from its suppliers. Accordingly, Midwestern witness Simonds contends that the most reasonable explanation of unaccounted-for gain is that it is due to measurement variations somewhere along the pipeline system. (3:611)

Midwestern does not question the fact that since its initial year of operation in 1959, it has experienced an unaccounted-for gain on its Northern and Southern Systems taken as a whole, with the exception of the calendar year 1961 which showed a small loss. However, Midwestern contends that since it checks its meters regularly and corrects deviations as found, it is reasonable to expect measurement variations pro and con largely to offset each other and the gain to disappear, with the result that the company in the future will experience a true net unaccounted-for loss due to leakage occurring during transmission, compression, and measurement. (3:611) Midwestern notes, in this connection, that it is not unusual for a long-line transmission company to have an unaccounted-for gain in its initial years of operation while its sys-

[20] Certainly the effect of adoption of the 87.5 percent minimum bill provision would be in the direction of reducing or eliminating any possibility that Midwestern would have to pay Trans-Canada for gas it cannot take.

tem is being stabilized; that this was in fact the experience of its parent, Tennessee Gas Transmission Company, which had unaccounted-for gain during the first four years of its operation and has had unaccounted-for loss for the succeeding 13 years. (8:1297) On the other hand, it is contended that it is unusual for a long-line transmission company to experience an unaccounted-for gain indefinitely. In support of this conclusion, Midwestern points to the fact, that, according to "Statistics of Natural Gas Companies for the year 1961" as published by this Commission, only 8 of the 78 reporting natural gas companies had unaccounted-for gains in 1959, 1960 and 1961; that less than half of these 8 companies were long-line transmission companies. (8:1295–6) Midwestern concludes that since the average lost and unaccounted-for gas shown for all of the 78 companies listed was approximately 0.7 percent of total deliveries and company-used gas, its recommended 0.3 percent allowance for lost and unaccounted-for gas is a highly conservative figure and should be adopted by this Commission.

Staff, however, contends that the confident prediction of Midwestern witness Simonds that the unaccounted-for gain will shortly disappear and leave Midwestern with a net loss caused by leakage, is not persuasive enough to overcome the solid facts of Midwestern's historical pattern of unaccounted-for losses and gains, including its test year experience and the experience of subsequent months. Staff emphasizes that although most of the reporting pipeline companies showed net losses for 1959, 1960 and 1961, it is nonetheless true that some companies showed unaccounted-for gains, including such important companies as Transcontinental, Coastal Transmission, and Kentucky Gas Transmission Company.[37] Under these circumstances, Staff contends that there is no justification for relying here upon the average experience of *all* companies, rather than upon the past experience of Midwestern itself.

Midwestern's historical experience with respect to unaccounted-for losses and gains may be summarized as follows:

(1) *Southern System*—(a) Twelve months ending December 31, 1960—net gain of 305,186 Mcf; (b) 12 months ending June 30, 1961—net gain of 189,138 Mcf; (c) 12 months ending December 31, 1961—net gain of 155,825 Mcf; test year, ending June 30, 1962—net gain of 160,019 Mcf.

(2) *Northern System*—(a) Twelve months ending December 31, 1961—net loss of 195,273 Mcf; (b) test year ending June 30, 1962—net loss of 29,095 Mcf.

(3) *Changes on Both Systems*—Since the end of the test period, the Southern System changed from a net gain to a net loss, while the Northern System changed from a net loss to a net gain.

(4) *Entire Company on an Overall Basis*—(a) Net gain for each year since the beginning of operations, with the exception of calendar year 1961 which showed a net loss of 39,448 Mcf; (b) test year ending June 30, 1962—net gain of 130,924 Mcf; (c) first 4 months of 1963—total company net gain of 164,810 Mcf; (d) first 5 months of 1963—total company net gain exceeded the net gain on a company-wide basis which Staff witness Goyne had forecast for a full 12 months. (1:56—57; 4:764, 801; 8:1294–5)

It is concluded here that the Midwestern adjustment, converting the test year actual unaccounted-for gain into a 0.3 percent allowance for lost and unaccounted-for gas, is based entirely upon speculation. Although it is, of course, entirely possible that Midwestern's experience in the future will change in such

[37] The 1962 Annual Reports for these companies reveal that Transcontinental and Kentucky Gas Transmission again showed gains for that year. Coastal Transmission, however, has subsequently merged with Houston, Texas Oil and Gas Company into Florida Gas Transmission Company, and the merged company showed a loss in 1962.

a way as to reflect consistent unaccounted-for losses, as has happened in the case of a majority of the pipeline companies, it is nevertheless also possible that Midwestern may in the future consistently experience unaccounted-for gains, as has been the case with respect to Transcontinental, Coastal Transmission, and Kentucky Gas Transmission Company. Under the circumstances, it is concluded that for the purpose of the instant proceeding the Staff has correctly reflected Midwestern's actual net unaccounted-for gain of the test year, which is representative of the historical pattern of Midwestern's own company-wide operations, rather than relying upon the *average* experiences of *all* pipeline companies in general. In the event that Midwestern should at some time in the future convert to a pattern showing consistent net unaccounted-for losses, it might thereafter be appropriate to consider the type of allowance for lost and unaccounted-for gas which is here recommended by the company.

C. *Costing of Exchange Gas Between Midwestern's Northern and Southern Systems*

This issue, involving a disputed amount of only $73,232, does not affect the total dollar amount of Midwestern's cost of service, but only the manner in which it is divided between Midwestern's Northern and Southern Systems. (4:764; Staff initial brief, p. 73) Under an exchange agreement with Michigan Wisconsin, Midwestern may deliver up to 30,000 Mcf a day to that company at Marshfield, Wisconsin, on Midwestern's Northern System, and Michigan Wisconsin will redeliver, on an exchange basis, an equivalent quantity into Midwestern's Southern System at Joliet, Illinois. The purpose of this exchange agreement was described by the Commission in Op. No. 331, 22 FPC 775, 783, as follows:

> * * * to effectuate the sale of Midwestern gas in the Chicago area if necessary to avoid paying Trans-Canada, under the latter's 95 percent annual minimum bill requirement, for gas Midwestern might not be able to sell to its customers on its Northern System.

By use of the exchange agreement, Midwestern has continually been able to take sufficient gas from Trans-Canada to meet the minimum bill provision and thus avoid having to pay for gas not taken. (1:59) On the other hand, the use of such exchange gas to supply a portion of the Southern System's gas needs has never resulted in Midwestern's being required to pay for gas not taken from its Southern System supplier, Tennessee Gas Transmission Company, under the latter's 66⅔ percent minimum bill. (1:61)

Midwestern in the instant case charges the Southern System at the rate of 21.5 cents per Mcf for the 4,510,343 Mcf of gas received from Michigan Wisconsin under the exchange agreement during the test year—representing the commodity rate at which Midwestern purchases gas from its supplier, Tennessee, on the Southern System. (4: 764) On the other hand, Staff prices the gas so exchanged during the test year at 19.19375 cents per Mcf, this being the commodity rate at which Midwestern purchases gas from Trans-Canada.[20] (1:61–2)

In support of its position that the exchange gas should be priced to the Southern System at 21.5 cents per Mcf, Midwestern alleges that in the absence of the exchange agreement it would have had to purchase equivalent volumes for its Southern System customers from Tennessee at that same rate; that accordingly under this approach the Southern System customers neither gain nor lose as a result of the exchange; that under the Staff approach, however, the Southern System

[20] Adjusted to reflect the Staff's conversion factor of 92.5 for Canada-U.S. currency, *supra*.

customers would be favored. Staff, on the other hand, contends that under Midwestern's 21.5-cent pricing the Southern System customers would be required to absorb a part of the Northern System's fixed costs; that this would not be reasonable or appropriate in view of the fact that the exchange is primarily for the benefit of the Northern System.

It is important to note at the outset that the Trans-Canada take-or-pay provision affects only the commodity side of the rate charged to Midwestern; that accordingly the total dollar amount paid by Midwestern to Trans-Canada under the take-or-pay provision during the test year for the 4,510,343 Mcf of gas here involved amounted to $865,704 (Exh. 57, Sch. 1, line 3—derived by multiplying this volume by the 19.19375 cents per Mcf commodity rate at which Midwestern purchases gas from Trans-Canada). The difference between the Staff and Midwestern approaches lies merely in the fact that Staff eliminates from Northern System gas supply expense at line 3 of Exh. 57, Sch. 1, and adds to Southern gas supply expense at line 12, only the actual $865,704 cost paid by Midwestern to Trans-Canada for this particular volume. Midwestern, however, removes from Northern System gas supply expense on line 3, and adds to Southern System gas supply expense on line 12, the sum of $938,271, an amount in excess of the actual purchased gas cost paid to Trans-Canada for this volume under the take-or-pay provision. Midwestern derives this figure by applying to the 4.5 million Mcf volume *not* the rate at which Midwestern purchases this gas from Trans-Canada, but rather the higher 21.5-cent rate at which Midwestern purchases other gas from Tennessee on its Southern System.

It seems clear that in the absence of a take-or-pay provision in the Trans-Canada contract, if Midwestern had had no market on its Northern System for this volume of gas during the test year it would simply have reduced its take from Trans-Canada by that amount. Under such circumstances Midwestern's total purchased gas cost paid to Trans-Canada for its Northern System would have been lower by $865,704. The Staff approach is intended to accomplish this same result, and no more.

It is true that under the Staff approach the Southern System obtains 4.5 million Mcf of exchange gas at a lower rate than it otherwise would have been required to pay for the same volume of gas had it been purchased from Tennessee. However, it is difficult to see why this cost saving to the Southern System should be used to decrease the overall costs charged to the Northern System. Since the purpose of the exchange agreement is to benefit the Northern System by enabling it to avoid incurring a loss under the Trans-Canada take-or-pay provision, it is concluded that the exchange gas should be costed here in such a way as merely to eliminate *the actual loss* which otherwise would have occurred to the Northern System under the Trans-Canada take-or-pay provision; that it should not, however, be treated in a manner which goes *beyond that*, and which would result in Southern System customers absorbing a portion of the fixed costs of the Northern System. Any other approach would mean that the Southern System would be used to take this excess gas off the hands of the Northern System *not at cost*, but at a profit which would be used to pay off a portion of the Northern System's fixed costs.[20]

[20] Two other Staff adjustments to Midwestern revenues need not be discussed here, since Midwestern has now adopted these adjustments in its initial brief, Appendix A—*i.e.*, (1) Staff's upward adjustment of Northern System revenues in the amount of $32,182, reflecting allowable variations in the computation of demand revenues attributable to the Michigan Wisconsin sale (Staff initial brief, p. 65); and (2) Staff's upward adjustment of Southern System excess revenues in the amount of $617,000 to reflect the net effect of the additional sale to Northern Illinois Gas Co. per Docket No. CP63-149 (Staff initial brief, p. 70).

VIII. Conclusion

The total overall cost of service here determined for Midwestern, based upon its operations in the test year ending June 20, 1962, as adjusted, is $64,435,917 of which $22,348,597 is attributable to the Northern System and $42,087,320 to the Southern System. Total revenues are determined in the amount of $71,483,171, of which $24,928,037 is attributable to the Northern System and $46,555,134 to the Southern System. On this basis, excess revenues amount to $7,047,254, of which $2,579,440 is attributable to the Northern System and $4,467,814 to the Southern System. (See Appendix 1–6).

The instant order will require a reduction of Midwestern's rates, effective from the date of this decision calculated to eliminate all excess revenues. As previously noted, consideration of the controverted *rate design* issues in this case is being deferred for a later stage, and the rate reduction required as a result of this decision will accordingly be applied on the basis of Midwestern's existing rate design. In order to accomplish this objective, the existing *commodity* charges on both the Northern and Southern Systems will be retained, and the entire required rate reduction will be applied to the *demand* charge. (Appendix 7 and 8)

Findings and Conclusions

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that

(1) Midwestern Gas Transmission Company is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this order are sales of natural gas in interstate commerce and are subject to the jurisdiction of the Commission.

(2) Midwestern's just and reasonable rates in Docket Nos. RP61–19 and RP62–7 from and after the date of the instant decision, subject to the adjustments referred to in paragraph (B) of the instant order, are as follows:

Rate schedule	Demand charge	Energy charge (cents)
Southern System: CDX-1	$2.92	22.0
Northern System:		
SR-2		53.6
CR-2	3.45	25.2
CD-2	3.45	25.2
I-2		25.2
CRL-2	3.70	25.2

(3) Midwestern should be required to file substitute tariff sheets, subject to the approval of the Commission, containing the rates herein found to be just and reasonable in Docket Nos. RP61–19 and RP62–7 as set forth in paragraph (2) above.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Within 45 days from the date of issuance of this order, Midwestern Gas Transmission Company shall file substitute tariff sheets satisfactory to the Commission containing the rates herein found to be just and reasonable in Docket Nos. RP61–19 and RP62–7, as set forth in finding paragraph (2).

(B) The rates herein found to be just and reasonable are hereby made subject to the following conditions:

(1) In the event that the Commission's final decision in *Midwestern Gas Transmission Co.*, Docket No. RP64–8, should approve the 87.5 percent minimum bill provision under Midwestern's contract with Michigan Wisconsin, Midwestern within 45 days thereafter shall file substitute tariff sheets satisfactory to the Commission, reducing the rates adopted in the instant decision to the level required to reflect annual sales to Michigan Wisconsin of 53,443,500 Mcf, rather than the 49,217,000 Mcf volume reflected here; and Midwestern shall at the same time refund to its customers, for the period from the date of the instant decision to the filing of such substitute tariff sheets, any excess revenues collected under the instant decision reflecting the difference between the 49,217,000 Mcf volume of sales to Michigan Wisconsin here assumed on the basis of the 75 percent minimum bill provision, and the 53,443,500 Mcf volume of sales estimated on the basis of the 87.5 percent minimum bill provision.

(2) In the event that the Commission's final decision in Docket No. RP64–8 should disallow the 87.5 percent minimum bill provision, Midwestern within 45 days thereafter shall refund to its customers, for the period from the date of the instant decision to the date of the final decision in Docket No. RP64–8, any excess revenues collected under the instant decision, as per ordering paragraph (B) (1), *supra*.

(3) Within 15 days after making refunds in accordance with paragraph (B) (1) or (2), *supra*, Midwestern shall report to the Commission in writing and under oath the amount of the refunds made and the relevant calculations with respect thereto, together with releases from each of its jurisdictional customers.

JOSEPH ZWERDLING,
Presiding Examiner.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP64-8

ORDER ADOPTING EXAMINER'S ORDER APPROVING INCREASED MINIMUM BILL AND TERMINATING PROCEEDING

(Issued October 13, 1964)*

Syllabus

1. Pipeline's proposal to increase monthly minimum bill of its Northern system's Rate Schedule CD-2 from 75% to 87.5% load factor found just and reasonable. P. 1090.
2. During winter periods proposed minimum bill would have no practical effect upon Michigan Wisconsin's pattern of takes or substantially alter its overall pattern of purchases. P. 1094.
3. Commission *terminates* proceeding initiated under Section 4(e) of the Natural Gas Act and *discharges* pipeline from any further refund obligation. P. 1097.

Jack Werner, Harry S. Littman, Melvin Richter, L. R. Pankonien, and *B. J. Williamson* for Midwestern Gas Transmission Company and Tennessee Gas Transmission Company

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company

Joel Yohalem and *Milton Grossman* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

This proceeding under Section 4 of the Natural Gas Act involves a proposal by Midwestern Gas Transmission Company (MGT) to increase the minimum bill in its Northern System Rate Schedule CD-2 from 75 percent to 87.5 percent. MGT filed its revised tariff sheets on September 13, 1963, to become effective October 15, 1963, the date on which its take-or-pay obligation to its Canadian gas supplier, Trans-Canada Pipe Line, Ltd. (Trans-Canada), was to be increased to 95 percent. The Commission, by order issued October 14, 1963, suspended the proposed increase for one day; and on October 16, 1963, the increased minimum bill became effective subject to refund pending final determination of the propriety of the increase in this proceeding.

Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), an intervener, and the only purchaser under the CD-2 rate, agreed not to object to the increased minimum bill and has adhered to this position throughout the proceeding. The Commission's staff opposed the increase at the hearing before the examiner on the ground that the 95 percent take-or-pay obligation to Trans-Canada could be met by increased transfers of Canadian gas to MGT's Southern System.

The presiding examiner issued his initial decision on July 15, 1964. He concluded that the changes in its tariff sheets proposed by MGT were just and reasonable, and not unduly discriminatory, preferential, or otherwise unlawful;

---

*Initial decision appears on p. 1083.

and that the proceedings should be terminated and MGT discharged from any further refund obligation under the order of October 14, 1963.

No exceptions to the ultimate conclusion of the examiner have been taken. MGT, however, has filed an exception disagreeing with the examiner's subsidiary finding with respect to the volumes of sales to Michigan Wisconsin under the 87.5 percent minimum bill. Staff has also filed a statement of its disagreement with certain language in the examiner's decision, to which MGT and its parent, Tennessee Gas Transmission Company, have filed a joint answer. Regarding the volumes of sales to Michigan Wisconsin, the examiner's finding is fully substantiated by the record in this proceeding. Moreover, his finding is the same as that of another examiner in a related proceeding involving the same question of sales to Michigan Wisconsin.[1] With respect to staff's statement, the questions of language raised do not bear on the examiner's ultimate conclusion, nor are they of such materiality as to warrant further discussion by us at this time. Without necessarily adopting all of the examiner's language, namely, those portions questioned by staff, we agree with his decision and his finding that the 87.5 percent minimum bill should be approved. Accordingly, we shall adopt his recommended order.

The Commission finds:

(1) Without necessarily adopting all of the language of the examiner's decision, namely, those portions questioned by staff, that decision, together with the examiner's further findings and conclusions and recommended order, should be adopted as the decision of the Commission as of the date of issuance of this order.

(2) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Consistent with the foregoing, and subject to the limitation set forth in Paragraph (1) above, the examiner's decision, together with his further findings and conclusions and recommended order, are hereby adopted as the decision of the Commission as of the date of issuance of this order.

(B) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

[1] See Opinion No. 444 issued today in *Midwestern Gas Transmission Co., et al.*, Docket No. RP61–19, *et al.*, *supra*, p. 993.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON PROCEEDINGS UNDER SECTION 4 OF THE NATURAL GAS ACT INVOLVING RATES AND CHARGES

(Issued July 15, 1964)

SIMPSON, *Presiding Examiner:* This proceeding arises under Section 4 of the Natural Gas Act (Act) and concerns the lawfulness of the rates, charges, classifications and services contained in Midwestern Gas Transmission Company's (Midwestern's) FPC Gas Tariff, First Revised Volume No. 1 and Original Volume No. 2, as proposed to be amended by First Revised Sheet No. 10 and revised title pages.

On September 13, 1963, Midwestern tendered for filing the foregoing revised tariff sheets, to become effective October 15, 1963, which by Commission's Order issued October 14, 1963,[1] were suspended and use deferred until October 16, 1963, when the same were permitted to become effective subject to refund as required

[1] Entitled, "Order Providing for Hearing, Suspending Proposed Revised Tariff Sheets, Fixing Date of Hearing, and Allowing Proposed Revised Tariff Sheets to Become Effective Subject to Refund Obligation."

by final order of the Commission, with interest at 7 percent, and the execution and filing of a compliance agreement and undertaking.

By its First Revised Sheet No. 10, aforesaid, Midwestern proposed to increase the monthly minimum bill of its northern system Rate Schedule CD–2 from a 75 percent load factor to an 87½ percent load factor minimum, to reflect a 95 percent annual minimum load factor imposed by its contract with its northern system supplier, Trans-Canada Pipe Line, Ltd. (Trans-Canada), effective October 15, 1963.[2]

Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), the only purchaser under the CD–2 rate, agreed with Midwestern in writing under date of May 16, 1960, not to object to the anticipated proposed increase in monthly minimum bill.[3]

In its order issued October 14, 1963, aforesaid, the Commission stated that the proposed change had not been shown to be justified, and may be unjust, unreasonable, unduly discriminatory, preferential, or otherwise unlawful, and, finding that it necessary and proper in the public interest so to do, ordered a hearing be held on a date to be fixed by notice of the Presiding Examiner concerning the lawfulness of the rate, charge, classification and service involved, to be preceded by a prehearing conference to be held before the Presiding Examiner, at a time, date and place therein fixed, for certain specified purposes including the definition of issues, agreement and stipulation as to facts relevant thereto, and, as necessary, the determination of procedures for hearing.[4]

By order issued November 26, 1963, the Commission denied Midwestern's motion to vacate the order issued October 14, 1963, filed October 28, 1963, wherein Midwestern contended, principally, that the current record in the Section 5(a) rate proceedings in Docket No. RP61–19, *et al.*, would afford adequate information in the premises.[5]

Two prehearing conference sessions were held prior to that directed by the Commission's Order of October 14, 1963, to consider various matters presented by a motion filed by Midwestern,[6] and the Commission's denial of the motion to vacate aforesaid,[7] following which, on December 24, 1963, the Presiding Examiner issued his order and ruling relating thereto which, among other things, provided dates for the service of prepared testimony and statements, variously by Midwestern, Michigan Wisconsin, and Staff, and for compliance by Midwestern with the filing requirements of Paragraph G of the Commission's Order of October 14, 1963.

---

[2] There is no proposal to change Midwestern's presently effective CD–2 demand rate of $4.55 and commodity rate of 25.2 cents per Mcf (14.73 psia).

[3] Midwestern's contract demand with Trans-Canada is 204,000 Mcf per day while Michigan Wisconsin's with Midwestern is 158,000 Mcf per day, or some 77 percent of the former figure.

[4] The Commission's Order provided that the prehearing conference commence on January 6, 1964, and by Paragraph (G) thereof that Midwestern serve on or before November 12, 1963, material required by Section 154.63 of the Regulations under the Act, and that Staff and all interveners serve their testimony and exhibits on or before December 13, 1963.

[5] No answers were filed to the motion.

[6] On October 28, 1963, Midwestern moved for an extension of time for filing the material referred to in Paragraph (G) of the Commission's Order of October 14, 1963, and suggested the holding of a prehearing conference to curtail issues and scope of testimony by stipulations. Such a conference was held on November 26, 1963, as directed by the Presiding Examiner in his ruling issued November 6, 1963.

[7] The prehearing conference session of December 10, 1963, a reconvening of the session of November 26, 1963, directed by order of the Presiding Examiner issued November 29, 1963, was for the purpose of reconsidering the scope of Midwestern's then proposed case-in-chief in the light of Commission's Order, aforesaid, denying Midwestern's motion to vacate.

At the prehearing conference held, as directed by Commission's Order, on January 6, 1964, prepared testimony of Midwestern's witnesses-in-chief was transcribed in the record and certain exhibits and items to be offered were identified, the Presiding Examiner directing that Midwestern file with the Commission its motion for conditional relief from further requirements of Paragraph G of the Commission's Order of October 14, 1963, and that, on specified dates fixed, Michigan Wisconsin serve certain prepared evidence, Staff its prepared evidence constituting its case-in-chief, and Midwestern its prepared rebuttal.[8] Hearing in the proceedings was duly set to commence February 24, 1964.

Previously, on November 4, 1963, notices of intervention were filed by the Michigan Public Service Commission and the Public Service Commission of Wisconsin; on November 12, 1963, a petition to intervene was filed by Michigan Wisconsin; and on February 4, 1964, a petition to intervene was filed by Tennessee Gas Transmission Company (Tennessee) to answer Staff's prepared exhibits and testimony served January 31, 1964. By orders issued December 31, 1963, and February 24, 1964, the Commission permitted intervention by Michigan Wisconsin and Tennessee, respectively.

Pursuant to the direction of the Presiding Examiner entered of record in the prehearing conference of January 6, 1964, the proceedings came on for hearing commencing February 24, 1964, concluding on the following date. Applicant (Midwestern), two interveners (Michigan Wisconsin and Tennessee), and Staff participated in the hearing.[9] Midwestern presented two witnesses on its case-in-chief and two on rebuttal, and Michigan Wisconsin and Staff presented one witness, each. Fourteen exhibits and eight items by reference were offered and received in evidence.[10] Simultaneous initial and reply briefs were duly filed by counsel for Midwestern and Tennessee, jointly, and by Staff, and an initial brief by counsel for Michigan Wisconsin.

THE ISSUES

The basic contested issue in this proceeding arises under Section 4 of the Act and concerns, in brief, whether the 87½ percent load factor minimum Midwestern proposes for monthly billing of its customer, Michigan Wisconsin, under the former's northern system's Rate Schedule CD–2, is just and reasonable.[11]

---

[8] These dates were: for the intervener Michigan Wisconsin's service, January 20, 1964; for Staff's service, January 31, 1964; and for Midwestern's rebuttal, February 10, 1964. On joint motion filed February 4, 1964, by Midwestern and the intervener Tennessee Gas Transmission Company (Tennessee), for good grounds stated, and without objection, Midwestern was granted an extension of time for filing its rebuttal to February 17, 1964, and Tennessee was given until the same date for filing its evidence in answer to that previously served by Staff.

[9] The intervener state commissions did not participate or appear at either the prehearing conferences or hearing, and did not file either brief or memorandum.

[10] Exhibits: Midwestern, 7; Michigan Wisconsin, 5; Staff, 2. Items by reference: Midwestern, 4; Staff, 4.

[11] Section 4(a) of the Act provides, in effect, that all rates and charges made by a natural-gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable; and Section 4(b) provides, in effect, that with respect to any such transportation or sale, a natural gas company shall make or grant no undue preference or advantage to any person, or subject any person to any undue prejudice or disadvantage, or maintain any unreasonable difference in rates, or charges, as between localities or classes of service. Finally, Section 4(e) places the burden of proof to show that an increased rate of charge is just and reasonable upon the natural-gas company. Jurisdiction, as determined in prior decisions of the Commission, with respect to both person and identical subject matter, is not contested in this proceeding.

THE CONTENTIONS

Applicant

Midwestern and Tennessee contend, in brief, that the current 95 percent minimum load factor applicable to deliveries from Trans-Canada represents a part of the price which had to be paid in order to obtain the Canadian supply; that Midwestern will be subjected to penalties should it fail to comply with the Trans-Canada contract minimum; that the proposed change to an 87½ percent minimum bill to Michigan Wisconsin together with transfer of 30,000 Mcf per day to Midwestern's southern system will substantially eliminate payments to Trans-Canada for gas not taken; that without the change it is likely that purchase by Michigan Wisconsin during the present calendar year would not attain certain levels estimated by either Michigan Wisconsin or Staff; and that revenue excesses which might result from the authorization of the change proposed would be minimal.

Midwestern further contends that in the past the Commission has approved minimum bills at levels higher than its proposed 87½ percent.[12]

Midwestern also contends that the proposed change in minimum bill would not necessitate any reduction by Michigan Wisconsin in purchases from other suppliers, and would not adversely affect the latter's ability to eliminate prepayments made to gas producers in the Woodward area of Oklahoma.

Midwestern finally contends that Staff's proposal that present transfers from Midwestern's northern system to its southern system be increased from 30,000 Mcf to 49,446 Mcf per day would not serve to eliminate the pay-for problem related to its Trans-Canada supply; that the southern system customers could not be depended upon to purchase amounts substantially above their respective 75 percent contract minima; and that the increased transfers would result in an aggravation of Tennessee's current take-or-pay problem related to its system purchases of producer-suppliers.

The Intervener Customers

Michigan Wisconsin contends that assuming market development predicted by its customers and normal economic and weather conditions[13] the increase in minimum bill would have no material long-term impact upon it.

Staff

Staff contends that the impact of the proposed increase on Michigan Wisconsin would be substantial; that by increasing the limit on exchange gas, Midwestern could avoid the take-or-pay impact of Trans-Canada's current 95 percent annual minimum bill; and, that Tennessee's prepayment difficulties are not relevant to the matter of eliminating the increase in Midwestern's minimum bill.

Staff further contends that the historical pattern of purchases by Michigan Wisconsin, estimates of future purchases, a possible decline in Btu value of

---

[12] Referencing El Paso Natural Gas Company and Transwestern Pipeline Company at 91 percent minima.

[13] That is, on these assumptions Michigan Wisconsin would require full contract volumes from all suppliers. The intervener also asserts that on the basis of average monthly volumes purchased the past 3 years the minimum bill would have had no practical effect November to March (5 months); and that, as to the remaining months, increasing use of gas for firm loads, further storage developments, and new firm entitlements authorized in Docket No. CP63-230 will all result in an increase in annual requirements. However, as of this time, Michigan Wisconsin's consent to the 87½ percent minimum bill rests on its assumption that the determination of Midwestern's CD-2 rate in RP61-19 will be based upon annual sales of 53,443,500 Mcf, estimated on the basis of purchases by it of 100 percent of its contract demand with Midwestern for 5 months and 87.5 percent during the remaining 7 months.

Midwestern's northern system supply (5 percent), and additional firm sales authorized in Docket No. CP63-230, all combine to support its estimate of normalized annual purchases by Michigan Wisconsin in the amount of 49,200,000 Mcf under a 75 percent monthly minimum bill; that the resulting 4,100,000 Mcf of gas which Midwestern would have to take from Trans-Canada to avoid penalty can be transferred to Midwestern's southern system;[14] that Michigan Wisconsin has indicated that it is willing and able to effect such transfer; that during the entire off-peak season in 1963 the market on Midwestern's southern system was adequate to absorb such transfer without encountering take-or-pay situations with respect to deliveries by Tennessee; and that estimates by southern customers for 1964 show an even greater system capability in this respect.[15]

THE EVIDENCE AND FINDINGS

Contract Minimum Quantities

The gas supply for Midwestern's northern system is provided by a firm 25-year contract with Trans-Canada Pipe Lines, Ltd. (Trans-Canada), dated April 14, 1960, which requires the former to take, and the latter to deliver, 204,000 Mcf of natural gas per day.[16] It provides a minimum monthly bill for the term thereof equal to the demand charge for the month plus a commodity charge equal to the commodity rate multiplied by the number of days in the month and 75 percent of the contract quantity, and, effective with the commencement of the fourth year of deliveries, December 15, 1963, a minimum annual bill, consisting of the sum of the monthly demand charges plus a commodity charge equal to the commodity rate multiplied by the number of days in the year and 95 percent of the contract quantity.

At the time Midwestern applied for its northern system certificate in Docket No. G-18313 it proposed to provide in its tariff (Rate Schedule CD-X3) an initial monthly minimum bill based on a 75-percent load factor for the first 3 years of service and thereafter 87½ percent, when the minimum annual bill in the Trans-Canada contract would take effect. The Commission rejected on the ground that this constituted a periodic increase contrary to Section 154.38 (d)(3) of its Regulations under the Act stating, however, that the rejection would not preclude a timely filing by Midwestern in regard thereto 3 years thereafter.[17] By letter dated May 16, 1960, Michigan Wisconsin agreed it would not oppose such a filing.

By contract with Midwestern, the intervener Michigan Wisconsin is obligated to take near Marshfield, Wisconsin, under the former's Rate Schedule CD-2, a demand quantity of 158,000 Mcf per day for resale to customers principally in Wisconsin and Michigan.

Against the possibility that Midwestern could not sell the volumes of gas contemplated the parties also entered into the exchange agreement dated September 21, 1960, which provides, in general, that at its election Midwestern may deliver to Michigan Wisconsin for redelivery at a point near Joliet, Illinois, up to 30,000 Mcf of gas a day, for disposition by the latter in the Chicago area.[18]

[14] Staff reduces the initial estimate of 4,900,000 Mcf as the volume which Midwestern would have to pay for, though not able to use, by 800,000 Mcf of estimated additional sales to other northern system customers.

[15] Staff contends that 1962 sales on the southern system are not representative of future expectations.

[16] All volumes are stated at a pressure base of 14.73 psia.

[17] *Midwestern Gas Transmission Company*, 22 FPC 775, 786-787 (1959).

[18] *Ibid.*, at 799; where the Commission also stated that Michigan Wisconsin proposed to purchase from Midwestern at 100 percent load factor, for the time Michigan Wisconsin intended to employ storage facilities to enable it to use the purchase to increase its peak day capacity by 191,600 Mcf (p. 788).

Deliveries by Midwestern to Michigan Wisconsin

Midwestern's deliveries to Michigan Wisconsin started October 14, 1960.[19] During the first three winters these averaged approximately 162,300 Mcf daily or in excess of the contract demand, and during the seven off-peak months averaged over-all some 127,100 Mcf per day as compared with the contract minimum (75%) of 118,500 Mcf.[20] While in only two instances were winter month averages less than the 87½ percent here proposed, off-peak monthly averages frequently approximated the amount of the then minimum bill.[21]

Estimates of Midwestern's Sales and Transfers

At the 95 percent minimum annual load factor now in effect under the Trans-Canada contract, to avoid having to pay for gas which it does not take, Midwestern must purchase 70,737,000 Mcf. It estimates that if Michigan Wisconsin is obligated merely to make purchases on a straight minimum bill of 75 percent, or in the amount of 44,773,250 Mcf,[22] it (Midwestern) would have to pay Trans-Canada for 7,329,887 Mcf of gas which it cannot take,[23] as compared with 1,528,846 Mcf on the basis of a straight minimum bill of 87½ percent.[24] In the former instance the Midwestern computes a net loss of $1,477,952 and in the latter a net loss of $44,576.[25]

However, on the assumption that Michigan Wisconsin would take at 100 percent load factor during the winter months and at the minimum of 87½ percent during the remainder of the year, or 51,626,500 Mcf, Midwestern estimates that gas paid for but not taken would come to 1,252,290 Mcf for a net gain of $61,749, assuming transfers during the peak months at a daily average of 30,000 Mcf.

Actual purchases by Michigan Wisconsin from Midwestern's northern system have averaged over the 3 past years 51,700,870 Mcf.[26] By order of the Commission issued November 12, 1963, at Docket No. CP63–230, *et al.*, Michigan Wisconsin has been authorized to sell on a firm basis gas previously available for sale only as interruptible; and, accordingly, on the basis of estimated customer's requirements of 303,714,000 Mcf for 1963–64 and 319,816,221 Mcf for 1964–65, it expects its requirements of suppliers, including Midwestern, to be greater than in the past.

To meet these estimated requirements, Michigan Wisconsin lists future purchases of firm gas supplies from pipe line sources of 324,332,000 Mcf, including 57,670,000 Mcf from Midwestern,[27] and anticipates the necessity of additional purchases of interruptible gas from Midwestern, Northern Natural, or of other sources.[28]

---

[19] As initial deliveries. Under an interim agreement initial deliveries to Midwestern by Trans-Canada were smaller than contract quantities. Deliveries under the main contract commenced December 15, 1960.

[20] The minimum at the proposed 87½ percent load factor amounts to 138,250 Mcf.

[21] So in September and October 1961; April 1 through October 31, 1962; and April 1 through September 30, 1963.

[22] Determined on the basis of estimates submitted by customers for the year 1963, but closely approximating the result obtained by applying a 75 percent minimum on a month by month basis (43,252,500 Mcf).

[23] After allowance for volumes absorbed in the company use, losses and unaccounted for gas in the total of 599,522 Mcf, and the transfer of 10,950,000 Mcf to the southern system.

[24] Computing sales to Michigan Wisconsin to be 50,461,250 Mcf.

[25] Crediting Transfers at Tennessee's commodity rate.

[26] Thus, 1960–61: 57,491,110 Mcf; 1961–62: 47,563,255 Mcf; and 1962–63: 50,048,245 Mcf.

[27] The 324,332,000 Mcf of total purchases, after company use and losses, yields a total salable supply of 310,000,000 Mcf which is 9,816,221 Mcf less than the previously stated customer requirements for 1963–64.

[28] In addition to its firm supply from Midwestern, Michigan Wisconsin has the option under the exchange agreement of September 21, 1960, of taking some 8,000,000 to 10,000,000 Mcf of transfer gas pursuant to Midwestern's Rate Schedule I–2.

However, as none of Michigan Wisconsin's suppliers has a unit cost as high as Midwestern's it would be less expensive for Michigan Wisconsin to purchase additional gas from others. Thus, Northern Natural's commodity rate is approximately 1½ cents per Mcf less than Midwestern's, and it can be assumed that but for Midwestern's minimum bill Michigan Wisconsin would be purchasing more gas than it is from Northern Natural and less from Midwestern.[29]

Although, in designing its annual expansion programs Michigan Wisconsin takes into account its contract obligations, it could well decide, as its counsel concedes, that on the basis of comparative costs it would reduce takes from Midwestern to the level provided in the minimum bill and arrange for its other supplier to meet its increased requirements. Also, in the event of a warm winter, and depending upon a like situation with respect to supplies, its takes from Midwestern would be subject to a probable similar reduction. On these bases, and in such events, there would be a complete failure on the part of Midwestern to conform its sales to its commitment under Trans-Canada's minimum bill.[30]

Michigan Wisconsin's witness testified that based upon actual purchases for the full 3 years since the first full month of delivery (November 1960), and substantial increases in actual sales to resale customers, the proposed change in minimum bill would have no practical effect upon it during the five winter months (November–March). It appears from the evidence that in winters, Michigan Wisconsin has generally taken gas month by month at approximately the full contract demand and has averaged overall even more than such demand. Further, despite the warmer weather prevailing in February 1964, which caused a reduction in takes to the minimum (87½%) Michigan Wisconsin expected, by exercise of its option applicable to transfer gas, to average its full contract demand over the whole winter period.

It is therefore concluded that at least during winter periods Midwestern's proposed minimum bill would have no practical effect upon Michigan Wisconsin's pattern of takes.

On the assumption that it would take at 100 percent load factor or its equivalent during five winter and at the proposed minimum during the seven off-peak months, Michigan Wisconsin estimates normalized future annual purchases at 53,443,500 Mcf,[31] and it is computed that, after allowance for sales to others (7,084,341 Mcf) and losses (739,546 Mcf), Midwestern would be required to pay for 596,882 Mcf of gas not taken, assuming the transfer of 8,872,791 Mcf to the southern system.

Staff bases its contention that Midwestern can avoid the impact of Trans-Canada's 95 percent annual minimum bill by increasing the volume of gas transferred to its southern system by 4,161,356 Mcf per year or 19,446 Mcf per day, upon the assertion that load factors of Midwestern's southern system customers, taken as a group, are high enough to permit an increase in transfers without creating a take-or-pay situation under Midwestern's supply contract with Tennessee, which carries a minimum monthly bill of 66⅔ percent. Sales to Michigan Wisconsin are computed by Staff on the basis of deliveries at the full contract quantity for five winter months and at a 75 percent minimum for the seven off-peak months. These totaling 49,217,000 Mcf, along with sales to others adjusted for new sales authorized, combined with Midwestern's estimate of fuel and losses, and transfers equivalent to 30,000 Mcf per day, gives a net gas

[29] Its purchases from Northern Natural are near minima.

[30] The acceptability of Trans-Canada's Contract not only is not at issue in this proceeding but is to be deemed a matter disposed of in the initial certificate proceeding; *Midwestern Gas Transmission Company, et al.*, 22 FPC 775, 782 (1959).

[31] Or, at 49,200,000 Mcf if the present minimum of 75 percent were retained.

requirement of 66,575,644 Mcf. The difference of 4,161,356 Mcf between this figure and takes required from Trans-Canada at 95 percent minimum annual load factor (70,737,000 Mcf), distributed to the off-peak months, gives the increase over 30,000 Mcf in daily transfers (19,446 Mcf) required on these premises to balance Midwestern's necessary purchases and sales.

The Transfer Market

On the evidence of record, as above set forth, it must be concluded that, Michigan will make substantially full use of its contract demand, during the five winter months, but that, due both to the high cost of Midwestern's supply and the availability of other lower cost sources, it will, during the seven off-peak months, tend to purchase from Midwestern at whatever should be the minimum bill.

There remains for consideration, therefore, Staff's recommended use of a minimum of 75 percent over an off-peak period of 7 months, with particular reference to the capacity of the southern system to absorb some 19,446 Mcf per day in addition to the 30,000 Mcf provided under the exchange agreement of September 21, 1960.

Because of Trans-Canada's minimum bill summer transfers from the northern system to the southern system have been mandatory and even winter transfers have been sold to customers on an overrun or surplus interruptible basis. While transfers have been, within the limits of the exchange agreement, and will be, continual in nature, Staff's proposal assumes that Midwestern's southern system major customers[32] will always purchase above minimums without particular regard to the fact that the market available is not unlimited and is dependent upon weather, business conditions, and competitive fuel prices.

Further, Midwestern's southern system major customers having alternate sources of supply which provide commodity charges lower than Midwestern's[33] it is reasonable to assume that curtailments and off-peak cut-backs would be applied first to Midwestern and that its sales could thus easily decline to minimum quantities. Indeed, in the last 3 years, Northern Illinois Gas Company and Peoples Gas Light & Coke Company, two major southern system contract demand customers, have cut back to Midwestern's contract minimum of 75 percent, or close thereto, during most of the seven off-peak months, leaving only Northern Indiana Public Service Company to provide substantial margins of average day volumes over minimums, such as are indicated in the following for 1963:

	Average day volumes (Mcf)	Minimum volumes (Mcf)	Margin over minimum volumes (Mcf)
April	198,000	150,000	48,000
May	194,200	150,000	44,200
June	192,600	150,000	42,600
July	199,000	150,000	49,000
August	197,800	150,000	47,800
September	198,800	150,000	48,800
October	197,600	150,000	47,600

[32] Northern Illinois Gas Company, Northern Indiana Public Service Company, and Peoples Gas Light & Coke Company.

[33] Northern Illinois purchases gas from Northern Natural Gas Company at a commodity rate of 23.14 cents as compared with the corresponding rate of 22.0 cents in Midwestern's Rate Schedules CD–1 and CDX–1. But these purchases represent but 5 percent of the total pipeline supply to the area.

While it may thus seem that nearly sufficient volumes are available to absorb a transfer of 49,446 Mcf the margins disclosed above are close and, of particular significance in connection with Midwestern's status as a high cost supplier, some 75,000 Mcf per day of Northern Indiana's summer interruptible industrial load is subject to curtailment overnight as the consequence of competitive fuel conditions.

Staff infers that the difference between Tennessee's 66⅔ percent and Midwestern's 75 percent minimum bill requirements offers a guarantee for the absorption of some 33,333 Mcf of transfer gas. However, in certificating Midwestern's southern system in Docket No. G–16841, the Commission took note of this differential but held that as the record indicated the economic feasibility of the project depended upon a load factor of at least 75 percent, Midwestern's minimum was both justifiable and necessary.[24] While this conclusion makes no reference to Tennessee, nevertheless, it bears upon the latter as Midwestern's sole source of supply for the southern system. Neither the evidence of record in this proceeding nor the opinion of the Commission in the certificate case discloses Tennessee's reasons for accepting a 66⅔ percent minimum bill, but it cannot be said that the 75 percent minimum was of substantially less significance to Tennessee than the 66⅔ percent minimum of its own contract.

The fact that some of the additional gas proposed for transfer might be used to provide cushion gas in storage developments on the southern system does not add significant support to the claim that the southern system can absorb the quantities proposed on a recurring basis.

Tennessee's Current Take-or-Pay Situation

Tennessee has not been able to take the minimum quantities provided under gas purchase contracts with its producer-suppliers, and in 1963, became obligated to pay for 30,200,000 Mcf which it could not take and for 1964 estimates that it will incur an additional deficiency of approximately 45,000,000 Mcf. Despite efforts to negotiate for relief it expects to be in such difficulties for the next several years. This situation requires consideration and is entitled to weight. Staff's proposal would simply add to these difficulties without apparent justification.

Other Considerations

Staff's suggestion that benefits would accrue to Midwestern's southern system customers through costing transfer gas at Trans-Canada's commodity rate in terms of Canadian funds overlooks the fact of ensuing transportation over Midwestern's transmission and Michigan Wisconsin's exchange facilities. Further, the various downward adjustments which have been, and apparently are yet to be, made in Tennessee's commodity rate because of the passing on of certain rate reductions received from producer suppliers leaves Staff's suggestion of benefits to southern system customers with insufficient support to justify acceptance.

In view of the fact that Michigan Wisconsin expects to be capable of taking substantially full contract volumes from Midwestern and its other suppliers under normal conditions in the future it cannot be found that the proposed increase in Midwestern's minimum bill will substantially alter its pattern of purchases, or necessitate a reduction in purchases from other suppliers, or unjustifiably increase its cost of purchased gas. Nor would the evidence support a finding that the proposed minimum bill would have any effect on Michigan

[24] *Midwestern Gas Transmission Company, et al.*, 21 FPC 653, 663 (1959).

Wisconsin's ability to make up prepayments incurred in connection with the dedication obtained by it in 1960–61 for developed and undeveloped acreage in the Woodward area of Oklahoma. This acquisition was necessary to enable Michigan Wisconsin to meet anticipated declines in deliveries from acreage previously dedicated to it in the Hugoton area. The make-up of deferred takes is thus directly related to the decline in the latter deliveries, and as Michigan Wisconsin proposes to continue the operation of its main line close to a 100 percent load factor the increase in Midwestern's minimum bill would not be expected to have any adverse effect in the liquidation of this account.[35]

The Commission's opinion in the original certificate proceedings discloses the necessities then confronting Michigan Wisconsin's customers in the matter of deficient gas supplies, and indicates the substantial nature of the benefits to Michigan Wisconsin and its resale customers in having access to Trans-Canada's source of gas.[36] There is no basis in the evidence in this proceeding for concluding that such benefits have not been fully realized or that Michigan Wisconsin would be unjustly burdened by having to bear a substantial portion of the associated consequences of Trans-Canada's minimum annual bill.

FURTHER FINDINGS AND CONCLUSIONS

Upon the findings and conclusions hereinabove set forth, it is herewith further found and concluded that the changes proposed by Midwestern in the First Revised Sheet No. 10 to its FPC Gas Tariff, First Revised Volume No. 1 and title sheets to its tariff Volumes Nos. 1 and 2 are just and reasonable, and are not unduly discriminatory, preferential, or otherwise unlawful; that the proceedings herein should be terminated; and that Midwestern should be discharged of the obligations of the compliance agreement and undertaking executed and filed by it as required by Paragraph D of the Commission's Order issued herein October 14, 1963.

ORDER

Upon consideration of the record herein, the contentions set forth in the briefs and proposed findings of respective counsel, and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this Order is a part,

IT IS BY THESE PRESENTS ORDERED, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) The proceedings herein be and the same are hereby terminated.

(B) Midwestern Gas Transmission Company be and it hereby is discharged of all obligations of the compliance agreement and undertaking heretofore executed and filed by it as provided in Paragraph D of the Commission's Order in these proceedings issued October 14, 1963.

EWING G. SIMPSON,
Presiding Examiner.

---

[35] As of December 31, 1963, prepayments totaled $7,694,000, but Michigan Wisconsin has the life of the contract to make up most of its prepayments and 10 years to make up the remainder.

E-7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND), AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7117; DELAWARE POWER & LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, DOCKET NO. E-7137; CITY OF DOVER, DELAWARE v. DELAWARE POWER & LIGHT COMPANY, DOCKET NO. E-7175

ORDER ACCEPTING RATE SCHEDULE FOR FILING AND AMENDING ORDER INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued October 13, 1964)

On July 17, 1964, Eastern Shore Public Service Company of Maryland (Maryland Eastern Shore), Eastern Shore Public Service Company of Virginia (Virginia Eastern Shore) and Delaware Power & Light Company (Delaware Power) submitted rate schedule filings to supersede currently filed schedules of the three companies as follows:

RATE SCHEDULE DESIGNATIONS

	Other party	Date of instrument	Description
Eastern Shore Public Service Company of Maryland: Rate Schedule FPC No. 10 (Supersedes Rate Schedule FPC No. 2 and Supplements No. 1 and 2 thereto).	Eastern Shore Public Service Company of Virginia; Delaware Power & Light Company.	July 16, 1964	Agreement.
Eastern Shore Public Service Company of Virginia: Rate Schedule FPC No. 5 (Supersedes FPC No. 2 and Supplements No. 1 and 2 thereto).	Eastern Shore Public Service Company of Maryland; Delaware Power & Light Company.	July 16, 1964	Certificate of concurrence.
Delaware Power & Light Company: Rate Schedule FPC No. 33 (Supersedes No. 17 and Supplements No. 1 and 2 thereto).	Eastern Shore Public Service Company of Maryland; Eastern Shore Public Service Company of Virginia.	July 16, 1964	Certificate of concurrence.

Under the proffered rate schedules, the companies inter-company transactions known as the "Vienna Power Pool" would be enlarged and the method of allocating inter-company pool generation and transmission costs would be changed. The rate schedules to be superseded by the proffered filings are currently the subject of investigation and hearing in the above docketed matters.[1] In filing the proposed rate schedules, the companies request alternatively effective dates therefore, of January 1, 1964, or August 17, 1964, 30 days after filing.

[1] See orders of the Commission issued November 18, 1963, 30 FPC 1305, February 7, 1964, 31 FPC 395, and August 3, 1964, 32 FPC 511, Docket Nos. E-7114, E-7117, and E-7137. By order issued August 26, 1964 [Unreported] the Commission consolidated Docket Nos. E-7114, E-7117, and E-7137 with Docket No. E-7175, order consolidating proceedings for hearing purposes and granting leave to intervene.

The Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act that the rate schedules of Maryland Eastern Shore, Virginia Eastern Shore and Delaware Power as identified above, be allowed to take effect as of August 17, 1964, 30 days after submittal of those filings and that Paragraph (A) of the Commission's Order issued November 18, 1963, in Docket Nos. E–7114, E–7117 and E–7137, as amended, be further amended to include these schedules.

(2) Good cause has not been shown for allowing the foregoing rate schedules to take effect as of January 1, 1964.

The Commission orders:

(A) Maryland Eastern Shore's, Virginia Eastern Shore's and Delaware Power's rate schedules identified and designated in the recital above, are hereby accepted for filing pursuant to Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations under that Act, to become effective as filed rate schedules of those companies on August 17, 1964.

(B) Paragraph (A) of the Commission's Order issued November 18, 1963, in Docket Nos. E–7114, E–7117 and E–7137, as amended, is hereby further amended to include the rate schedules herein accepted for filing.

(C) This acceptance for filing does not constitute approval of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such rate or service provided for in the above designated rate schedules; nor shall such acceptance be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the foregoing companies.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

LOUP RIVER PUBLIC POWER DISTRICT, PROJECT NO. 1256

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued October 14, 1964)

Application was filed on March 22, 1963, under Section 6 of the Federal Power Act, by Loup River Public Power District, licensee for major Project No. 1256, for further amendment of its license for the project located on Loup River in Nance, Madison, Stanton, Wayne, Dixon, Colfax, Dodge, Douglas, Butler, Saunders and Lancaster Counties, Nebraska, and affecting navigable waters of the United States.

Specifically, the licensee seeks authority to increase the storage capacity of Lake Babcock (a part of the project works) by: (1) enclosing with dikes approximately 230 acres of land located northeast of and adjacent to Lake Babcock; (2) constructing one reinforced concrete control structure between Lake Babcock and the proposed addition thereto; and (3) reinforcing the dikes between Lake Babcock and the proposed addition, which will be subject to wave action from the addition.

The licensee states that the proposed changes are necessary and desirable for the reasons that: (1) by increasing the storage capacity available thereto, the peaking capacity of the Columbus powerhouse will be increased; and (2) it will

add to Lake Babcock, about 1,400 acre-feet of its storage capacity which has been lost to siltation.

The Department of the Army and the Chief of Engineers have reported that the proposed enlargement of the forebay storage capacity would have no significant effect on the interests of navigation, and that the plans of the project structures are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in the license of certain conditions in the interest of fish and wildlife and in the interest of providing free access to the public. Lake Babcock is administered as a waterfowl preserve by the Nebraska Game, Forestation and Parks Commission under an agreement with the licensee.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The license for Project No. 1256, further amended as hereinafter provided, is in the public interest.

(3) Exhibit K, Sheet 11 (FPC No. 1256–97), and Exhibit L, Sheet 9 (FPC No. 1256–98), showing the additional lands included in the extension of Lake Babcock and the design at the dikes enclosing the extension of Lake Babcock, conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) The license for Project No. 1256 is hereby further amended, effective as of September 1, 1964, (1) to authorize and include thereunder the project changes specifically described in the second paragraph of this order: and (2) to include in the license the following additional articles:

Article 31. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 32. The Licensee shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be prescribed by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Nebraska Game, Forestation, and Parks Commission, after notice and opportunity for hearing and upon a finding based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 33. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways, and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

(B) The exhibits designated and described in finding (3) above are hereby approved as part of the license for the project.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FRANK E. PEACOCK, PROJECT NO. 2427

ORDER ISSUING PRELIMINARY PERMIT

(Issued October 14, 1964)

Application was filed on November 13, 1963 by Frank E. Peacock (Applicant) of Wilmette, Illinois, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for a period of 12 months for proposed Project No. 2427, known as the Glen Park Project, to be located on the Black River in the Village of Glen Park in Jefferson County, New York.

Applicant proposes under any preliminary permit issued to study redevelopment of a site occupied by a run-of-river paper-mill dam and powerhouse abandoned in about 1930 and located on a site now owned by Niagara Mohawk Power Corporation. Applicant would lease the property from Niagara Mohawk for a period of 30 years and would sell the project output to Niagara Mohawk. The latter has expressed its willingness to discuss the proposed lease and purchase of output with Applicant. The redeveloped project would have an installed capacity of about 5,000 kilowatts and an estimated average annual output of about 40,000,000 kwh.

The Glen Park Project is located on the Black River at mile 4.5. According to available records, various sections of the Black River and its tributaries have been used for log driving at one time or another. In 1826 and 1837, respectively, a saw-mill and a grist-mill were built at the village of Dexter, located just above the mouth of Black River for the manufacture of lumber from logs floated down the river. During the year 1873, 140 vessels entered

and cleared Dexter with an average tonnage of lumber of 6,580 tons. In 1823–24, a saw-mill was built at Felts Mills (river mile 17) and in 1842 another and larger mill was built downstream. The Pine Plaines immediately adjacent to the river on its north bank furnished for many years the logs supplying these mills, but when that source became exhausted, the logs were taken from the forests in the eastern part of Lewis County and were floated down the Black River to the mills. There is historical evidence of the transportation of logs on the Black River between Brownville and Carthage at mile 31. Black River was improved by the State for navigation by locks and dams between Carthage and Lyons Falls, at mile 72, and was connected by a canal which extended from Lyons Falls overland to the Mohawk River and the Erie Canal.

The Secretary of the Army and the Chief of Engineers have stated that there is no objection to the issuance of a preliminary permit for the project.

The Department of the Interior, in commenting on the application, stated that the proposed project would not affect significantly wildlife resources and could afford opportunities for the conservation and development of fishery resources. The Department recommended for inclusion in any preliminary permit for the project, a condition in the interests of fish and wildlife resources.

The Department of Health, Education, and Welfare, in commenting on the application, stated that neither the Department nor the New York State Department of Health anticipate any problems involving water supply, water quality control or mosquito control in connection with the proposed project.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

The Commission finds:

(1) The Black River from its mouth in Lake Ontario to a point upstream at least to Lyons Falls at river-mile 72, is a navigable waterway of the United States.

(2) Applicant is a citizen of the United States.

(3) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The proposed project will not affect lands of the United States or a Government dam, and no reason is apparent at this time for development of the proposed project by the United States.

The Commission orders:

(A) This preliminary permit is hereby issued to Frank E. Peacock (Permittee) for a period of 12 months, effective as of September 1, 1964, for the sole purpose of maintaining priority of application for license for Project No. 2427, to be located on the Black River, a navigable water of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2427 will consist of the redevelopment of a site occupied by an abandoned dam and powerhouse which would require a new

diversion dam 10 feet high, a powerhouse with an installed capacity of 6,250 kva in one unit, a tailrace and a short transmission line.

(C) This permit is also subject to the terms and conditions set forth in Form P–1, entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305), which terms and conditions, designated therein as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each 6-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, New York, New York, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall during the period of project planning, cooperate with the United States Fish and Wildlife Service and the New York State Conservation Department for the purpose of planning and designating adequate conservation measures: (1) to prevent loss of or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of or damage to these resources, and (3) to develop and improve these resources where practicable.

Article 11. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission Regulations under the Federal Power Act.

Article 12. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed by the permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF COLORADO, PROJECT NO. 2351

ORDER AMENDING LICENSE (MAJOR)

(Issued October 14, 1964)

Application was filed on May 12, 1964, and supplemented by filings of May 28 and June 4, 8, and 15, 1964, by Public Service Company of Colorado, licensee for Cabin Creek Pumped Storage major Project No. 2351, for amendment of the license for the project to include therein revised Exhibits J, K, L and M.

The revised Exhibit L drawings show the final design of the project works. The revised Exhibits J and K show the project lands and location of the project works to be included in the project boundary.

The application requests authorization for the following principal changes in the project:

(1) With respect to the Upper Dam—relocate the Upper Dam about 400 feet upstream from the presently authorized site; change its type from dumped rock-fill with concrete facing to compacted earth and rock-fill with concrete facing; increase its height by 28 feet to 202 feet change the spillway from ungated open-channel type to weir type and reduce its capacity; raise the maximum operating water level of the reservoir by 27 feet to elevation 11,196 feet; and increase the gross storage capacity 200 acre-feet to 1,600 acre-feet;

(2) With respect to the Lower Dam—relocate the Lower Dam about 1,000 feet upstream from the presently authorized site; change its type from compacted rock-fill and impervious core to compacted earth and rock-fill and impervious core; decrease its height by 18 feet to 80 feet; change the spillway type from ungated open-channel to intake-tunnel unit; and raise the maximum operating water level of the reservoir by 14 feet to elevation 10,012 feet, without change to minimum operating water level or gross storage capacity;

(3) Realign the power tunnel as required by the new location of Upper Reservoir; change its profile; and reduce upper sections from 20-foot diameter to 15-foot diameter;

(4) Change the installed generating capacity of the powerhouse from 225,000 kw in three units to 300,000 kw in two units; and

(5) Relocate the switchyard from north of the powerhouse to south of the powerhouse.

Subsurface investigations completed by the licensee since the issuance of the license for the project reveal conditions which require most of the changes proposed in the application. Relocation of Lower Dam to a site with suitable foundation conditions required raising the reservoir level to maintain the same reservoir capacity. Relocation of other project structures also resulted from the more extensive subsurface investigations as well as from the need of maintaining the overall project characteristics as related to the relocated Lower Reservoir.

A Commission staff review and analysis of the proposed changes in the project show that the project structures will be safe and adequate. Although the estimated project cost, including interest during construction, has increased from $26,091,000 to $31,960,990, the dependable capacity has been increased from 225,000 kw to 268,000 kw, resulting in a reduction of estimated installed cost from $116/kw to $106/kw. With respect to the project as changed, the estimated annual benefit of $5,809,000 would exceed by $654,000 the estimated annual cost of $5,155,000, giving a benefit-ratio of 1.13 as against 1.14 for the project as originally licensed.

The Chief, Forest Service, has reported that the proposed changes to the project will not interfere or be inconsistent with the purposes for which the Arapaho National Forest was created or acquired.

Assessment of annual charges for occupancy by the project of lands of the United States will be made when revised Exhibits F and K are filed as required by Article 36 of the license.

The Commission finds:

(1) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received.

(2) The authorized installed capacity of the project under this amendment is 400,000 horsepower, and the increased annual charges for reimbursing the United

States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided is reasonable.

(3) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license as amended:

Exhibit	FPC No. 2351	Entitled: Cabin Creek Pumped Storage Hydroelectric Project
Amended Exhibit J	-17	"General Map," superseding Exhibit J (FPC No. 2351-4).
Amended Exhibit K	-18	"Project Area" superseding Exhibit K (FPC No. 2351-5).
Amended Exhibit L:

Sheet 2A of 3	-20	"Powerhouse Structure" superseding Exhibit L, Sheet 2 3 (FPC No. 2351-7).
Supplementary Exhibit L:		
Sheet 1 of 21	-30	"Plans—Project Structures."
		Lower Dam
Sheets 3 and 4 of 21	-23 and -24	"Relief Wells."
Sheets 5 and 6 of 21	-25 and -26	"Sections."
Sheet 7 of 21	-27	"Spillway and Outlet."
Sheet 8 of 21	-28	"Spillway, Tunnel and Outlet Excavation."
Sheet 9 of 21	-83	"Spillway, Retaining Wall and Outlet."
		Upper Dam
Sheets 11 and 12 of 21	-30 and -34	"Sections."
Sheet 13 of 21	-31	"Face Slab and Parapet Wall."
Sheet 14 of 21	-32	"Face Slab and Spillway Details."
		Power Tunnel
Sheet 15 of 21	-35	"Plan and Profile."
Sheets 16 and 17 of 21	-36 and -37	"Concrete Lined—Details."
Sheet 18 of 21	-38	"Distribution System—Details"; and
Amended Exhibit M entitled "General Description of Equipment" in four typewritten sheets filed May 28, 1964, superseding Exhibit M in five typewritten sheets filed March 7, 1963.		

of which exhibits, those sheets of Exhibit L pertaining to the Lower and Upper Dams together present information that completely supersedes that shown on Exhibit L, Supplement Sheets 1 and 2 (FPC Nos. 2351-10 and -11).

(4) The exhibits described in finding (3) above as being superseded should be eliminated from the license for the project.

The Commission orders:

(A) The revised exhibits designated and described in finding (3) above are hereby approved as part of the license for Project No. 2351, and the exhibits referred to in the same finding as being superseded are hereby eliminated from the license for the project.

(B) Article 47(i) of the license for the project is hereby amended by substituting "400,000 horsepower" for "300,000 horsepower" as the authorized installed capacity of the project.

(C) This amendment in the manner set out above shall not operate to alter to amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision, or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 430-A

UNITED FUEL GAS COMPANY, DOCKET NO. G-20270; ATLANTIC SEABOARD CORPORATION, DOCKET NO. G-20272

MEMORANDUM OPINION AND ORDER MODIFYING OPINION NO. 430 AND ACCOMPANYING ORDER AND PERMITTING THE FILING OF REPLY

(Issued October 14, 1964)*

Syllabus

1. Opinion No. 430 modified to provide that supplier rate reductions and refunds, prior and subsequent to issuance date of opinion, be reflected on "as received" basis. P. 1108.
2. There is no logical or equitable basis for determining refunds for past period on different basis than for future and every reason to apply just and reasonable rate design for entire period in controversy. PP. 1108-1109.
3. Apart from this modification [and minor change], Commission *affirms* discussion of *Seaboard* formula and rate design contained in prior opinion. P. 1109.
4. Data, brought before Commission for first time, reflecting supplier rate reductions exclusively in demand charges, shows significantly heavier impact in reducing pipeline's demand charges in relation to commodity charges than appeared in Opinion No. 430—resulting rates would tend decidedly in direction of straight *Seaboard* rates and be inconsistent with prior holding that a material departure from *Seaboard* method and rates is justified. P. 1109.
5. "All in demand" method would, by producing lower demand charges, run counter to two Commission objectives of encouraging retention and growth of interruptible industrial sales and installation of storage and peak shavings. P. 1109.
6. Rates for pipeline designed to reflect supplier rate reductions and refunds on "as received" basis will better satisfy requirements and meet needs here. P. 1109.
7. Supplier refunds should be passed on by pipelines in the same manner as received by them. P. 1110.
8. Since costs were initially classified on basis of *Seaboard*, it is appropriate that transfer of facilities [Boldman Compressor Station, etc.] should be reflected in demand and commodity charges of rates to be filed on basis of *Seaboard* cost classification. P. 1110.
9. Refund requirements of prior opinion do not extend to matters Commission authority cannot lawfully reach, such as refunds to retail customers. P. 1110.
10. Commission *affirms* Opinion No. 430 as herein modified and otherwise *denies* applications for rehearing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

O'CONNOR, *Commissioner:*

On July 20, 1964, 32 FPC 224, we issued an order granting rehearing of Opinion No. 430 and accompanying order issued herein on June 2, 1964, 31 FPC 1342, for

*Order issued November 23, 1964 denying rehearing, 32 FPC 1360.

the purpose of considering further the numerous applications filed.[1] That order also stayed the provisions of Opinion No. 430 requiring United Fuel Gas Company (United Fuel) and Atlantic Seaboard Corporation (Atlantic Seaboard), the respondents in this rate proceeding under Section 4 of the Natural Gas Act (Act), to file revised tariff sheets providing for reduced rates, and make refunds.

In Opinion No. 430, we were concerned primarily with the proper design of respondents' CDS (contract-demand) rates, *i.e.*, the determination of the proper levels of the demand and commodity components of the rates. Consideration of this issue also involved determining the method by which reductions in the demand and commodity charges of the rates of respondents' suppliers[2] should be reflected in the demand and commodity charges of respondents' rates for the period April 5, 1960, to the date of the Commission's opinion (June 2, 1964), and for the period subsequent to that opinion.

We held that refunds for the period prior to the issuance of Opinion No. 430 (and the effect of certain property transfers)[3] should be based on reductions made exclusively in the demand charges of respondents' rates. We further decided that rate refunds by respondents' suppliers in this period should likewise flow through respondents to their customers exclusively on the demand side. However, we held that supplier rate reductions made subsequent to June 2, 1964, should be reflected in respondents' rates on the same basis, in the distribution between demand and commodity, as received from the suppliers.

Most of the applicants (Washington Gas is the major exception) object principally to the above-described "all in demand" method of reflecting supplier rate reductions and refunds made prior to June 2, 1964, urging that instead they should be distributed between demand and commodity on the same basis as they are received from the suppliers. These applicants' principal arguments can be summarized under four headings.

First, these applicants contend that the above-described "all in demand" method would drastically reduce respondents' demand charges while leaving their commodity charges unaffected, and would thereby produce rates effective as of the date of the opinion that closely approach so-called straight *Seaboard* rates, see

---

[1] Applications for rehearing were filed by The Dayton Power and Light Company on June 29, 1964; Baltimore Gas and Electric Company on June 30, 1964; Commonwealth Natural Gas Corporation on July 1, 1964; The City of Columbus, Ohio, on July 1, 1964; the Independent Natural Gas Association of America on July 2, 1964; United Fuel Gas Company and Atlantic Seaboard Corporation on July 2, 1964; Washington Gas Light Company on July 2, 1964; The United Gas Improvement Company on July 2, 1964; The Manufacturers Light & Heat Company and Cumberland and Allegheny Gas Company on July 2, 1964; The Ohio Fuel Gas Company on July 2, 1964; and Roanoke Gas Company on July 6, 1964.

Washington Gas Light Company filed an answer to the application for rehearing of United Fuel and Atlantic Seaboard on August 4, 1964, as permitted by our regulations.

United Fuel and Atlantic Seaboard filed on August 12, 1964, a request for leave to file a reply to the answer of Washington Gas Light Company, to which Washington Gas Light Company filed opposition on August 21, 1964. By this opinion, we shall permit the filing of United Fuel's and Atlantic Seaboard's reply, as set forth hereinafter.

[2] United Fuel's suppliers include Tennessee Gas Transmission Company and various southwestern producers; Atlantic Seaboard's principal supplier is United Fuel.

[3] Opinion No. 430 at p. 1352, provides that respondents' costs of service should reflect the transfer of the Boldman compressor station to United Fuel effective as of April 5, 1960, and the transfer of the remainder of the facilities (principally a portion of the KA–20 line) effective as of October 1, 1963.

Atlantic Seaboard Corporation, 11 FPC 43.[4] They say that this would be contrary to our holding elsewhere in Opinion No. 430 that a material departure from the *Seaboard* formula and *Seaboard* rates is warranted.

Second, these applicants contend that the "all in demand" method and the resulting low-demand charge rates are inconsistent with the rate design conclusions stated elsewhere in Opinion No. 430, respecting the desirability of high demand charges and low commodity charges to facilitate respondents' making interruptible industrial sales and to encourage storage and peak shaving on their systems. They further argue that this method discriminates against respondents' high load factor customers, in favor of Atlantic Seaboard's low load factor customer, Washington Gas. They argue that, in contrast, the "as received" method would better serve the stated objectives of Opinion No. 430.

Third, these applicants argue that the "all in demand" method improperly diverts sizable refunds from ultimate consumers in areas served by respondents' high load factor customers, to consumers served by low load factor customers. For example, Ohio Fuel, one of the high load factor customers of United Fuel, contends that its customers would receive some $1.6 million less in refunds under the refund procedure followed in Opinion No. 430 than they would if the refunds were made on the "as received" basis.

Finally, certain applicants, particularly Manufacturers Light & Heat Company, *et al.* (Manufacturers), contend that although Opinion No. 430 correctly found that use of the *Seaboard* formula has serious infirmities, it erred in not adopting another rate design method. Respondents in particular further contend that in designing their rates we did not give sufficient effect to considerations they deem important, including the claimed need of respondents for rates that, in the interest of stability, do not reflect a marked reduction in the demand charges; and for rates with commodity charges that would enable respondents to compete more successfully with other pipelines.

In contrast, Washington Gas contends that Opinion No. 430 erred in finding that use of the *Seaboard* formula in designing rates has serious infirmities, arguing that there is no warrant for departing from that formula. Also, it contends that the record does not support our finding that mitigating circumstances justify rates for respondents that would recover a larger portion of overall costs through the demand components of the rates than would *Seaboard* rates.

We have considered with care the entire problem of designing rates for respondents, and have come to the conclusion that Opinion No. 430 should be modified to provide that supplier rate reductions and refunds both prior and subsequent to the date of issuance of Opinion No. 430 shall be reflected on the "as received" basis requested by respondents and most of the applicants, and recommended by the Commission's Staff and approved by the Presiding Examiner. We agree that there is no logical or equitable basis for determining refunds for the past period on a different basis than we have prescribed for the future and

[4] The following compares the approximate indicated CDS–1 rates for respondents as of the June 2, 1964, date of issuance of Opinion No. 430, showing supplier rate reductions handled on various bases:

	United Fuel	Atlantic Seaboard
1. Op. 430 rates, no supplier reductions	$2.15–29.58¢	$2.86–32.16¢
2. Op. 430 rates, supplier reductions in demand	1.85–29.58¢	2.51–32.16¢
3. Op. 430 rates, supplier reductions as received	1.98–28.92¢	2.69–31.18¢
4. *Seaboard* rates, no supplier reductions	1.93–30.75¢	2.51–34.18¢
5. Staff recommended rates, no supplier reduction	1.93–30.75¢	2.80–32.50¢
6. Examiner approved rates, no supplier reductions	2.01–30.30¢	2.86–32.16¢
7. Company filed rates, no supplier reductions	2.25–31.04¢	3.25–32.18¢
8. Company advocated rates, no supplier reductions	2.15–29.58¢	3.10–30.74¢

every reason to apply what we consider the just and reasonable rate design for the entire period in controversy. Apart from this modification (and another minor change described hereafter), we affirm the discussion of the *Seaboard* formula and the design of rates contained in Opinion No. 430.

The above-described modification is supported by a number of considerations. First, data brought before us for the first time[6] by the parties' applications for rehearing and other filings disclose that the supplier rate reductions and refunds are considerably larger than formerly appeared.[6] It is clear from such data that reflecting supplier rate reductions "all in demand" would have a significantly heavier impact in reducing respondents' demand charges in relation to commodity charges than appeared to be the case when Opinion No. 430 was issued, see the comparison of rates in fn. 4, *supra*. The resulting rates, as applicants point out, would tend decidedly in the direction of straight *Seaboard* rates, which obviously would be inconsistent with our holding in Opinion No. 430 that a material departure from the *Seaboard* method and *Seaboard* rates is justified. No party, it may be mentioned, has objected to our considering the data now available showing the large size and heavy impact of supplier rate reductions and refunds; and such consideration is necessary and proper in the circumstances presented by this case.[7]

Furthermore, the "all in demand" method would, by producing relatively lower demand charges in relation to commodity charges, run counter to two of the principal objectives of Opinion No. 430, of encouraging the retention and growth of interruptible industrial sales, and encouraging the installation of storage and peak shaving. The importance of these objectives to respondents and most of their customers, and the means by which they may be attained in the proper design of rates, are discussed at length in Opinion No. 430. These considerations are no less persuasive because they involve a past period; otherwise a mere lapse of time rather than a decision on the record will be controlling. It is clear from that discussion that to achieve such objectives, it is necessary to design rates for United Fuel and Atlantic Seaboard that have higher demand charges and lower commodity charges for the future than would result from the "all in demand" method of reflecting supplier rate reductions. Accordingly, we have explored the various methods of reflecting supplier rate reductions and refunds, including the "as received" method, the "fifty-fifty" method originally advocated by respondents, and other possible methods and variations. Also, we have evaluated the effect of such methods on respondents' rates in light of the evidence in the record relative to the economic and operating requirements of respondents and their customers. In our judgment, based upon a consideration of all the circumstances, rates for respondents designed to reflect supplier rate reductions and refunds on the "as received" basis will satisfy the requirements and meet the needs of this case better than any other rates.[8] Such rates will facilitate the attainments of all the rate design objectives in this case. Further,

[5] Data respecting the bulk of the supplier rates reductions and refunds were not available until after the hearing in this case was closed.

[6] United Fuel states that its total refund obligation aggregates some $63,000,000 (exclusive of interest), of which some $16,500,000 has already been refunded pursuant to prior Commission orders.

[7] The issue of how supplier rates and refunds should be reflected in respondents' rates was reserved for decision in this proceeding by our order approving the settlement of respondents' cost of service, see Opinion No. 430, at p. 1358.

[8] This approach produces an indicated approximate CDS–1 rate for United Fuel as of June 2, 1964, and for the future of $1.98 demand and 28.92 cents commodity, compared with the Opinion No. 430 "all in demand" CDS–1 rate of $1.85 demand and 29.58 cents commodity. The indicated, approximate CDS–1 rate for Atlantic Seaboard following this approach would be $2.68 demand and 31.18 cents commodity, compared with the Opinion No. 430 "all in demand" CDS–1 rate of $2.51 demand and 32.16 cents commodity.

such rates will effect as fair an accomodation of the competing interests of respondents and of their high and low load factor customers as is reasonably practicable under the circumstances.

Consistent with the above, supplier refunds also should be passed on by respondents in the same manner as received by them. The supplier refunds in dispute arose during the period prior to the June 2, 1964, issuance date of Opinion No. 430. Obviously, the matter of main concern respecting such refunds is to make sure they are passed on to respondents' customers on as fair and equitable basis as possible. In the light of the facts now before us respecting the magnitude of the amounts involved, it is clear that use of the "all in demand" method in calculating and making refunds would be unfair and is unsupportable because it would unjustifiably shift large amounts of refunds to which high load factor customers are entitled, to low load factor customers, and thus wrongfully discriminate against the former. Here again, we have considered the possible alternative methods and the effect of their application, and have concluded that reflecting supplier refunds on the "as received" method would be more fair to respondents' customers and to the ultimate consumer than any other method.

In light of our findings and conclusions above and in Opinion No. 430, no discussion is required of the contentions of Manufacturers and Washington Gas summarized above, or of other allegations by applicants that we erred in the matter of rate design, and in our treatment of supplier rate reductions and refunds.

As indicated above, the rates for respondents mentioned in the preceding discussion are the approximate indicated rates. In arriving at the exact rates for respondents, we shall follow the procedure prescribed in Opinion No. 430, at p. 1358, *et seq.*, of requiring respondents to file rates acceptable to the Commission computed on the basis of the commodity charges there stated, but reflecting supplier rate reductions and refunds on the "as received" basis in conformity with the modification prescribed hereinabove.

Since the costs in these dockets were initially classified on the basis of the *Seaboard* formula, it is appropriate that the transfer of facilities authorized in CP61–107 (Boldman Compressor Station, etc.), should also be reflected in the demand and commodity charges of the rates to be filed on the basis of the *Seaboard* classification of costs.

The procedure to be followed in making refunds shall be as provided in Opinion No. 430, except as to time. The stay of Opinion No. 430 granted by our order issued July 20, 1964, should be dissolved as of the date of issuance of this opinion. Also, the time limits which under Opinion No. 430 run as of the date of issuance of that opinion, shall run as of the date of issuance of the present opinion.

Turning to another matter, certain applicants object to paragraph (E) of Opinion No. 430, which provides in part pertinent that all natural-gas companies subject to the jurisdiction of the Commission receiving directly or indirectly refunds as a result of Opinion No. 430, shall refund to their customers without additional interest all refunds received from respondents, within 45 days of receipt of such amounts. Thus, Manufacturers, Washington Gas, and Ohio Fuel contend that this provision is erroneous or ambiguous in that it appears to direct the disposition of refund money to the retail customers of integrated companies whose operations are both interstate and local and whose rates at the retail level are subject to State or local control. Also, they contend that in various respects they cannot feasibly comply with the refund requirements of Opinion No. 430.

Of course, the requirements of paragraph (E) do not extend to matters our authority cannot lawfully reach, such as refunds to retail customers. Any

party which questions the reach of paragraph (E), or considers itself unable to meet its requirements, may follow the procedures prescribed therein for the deciding of protests to the requirements of that paragraph.

Finally, respondents, and also the Independent Natural Gas Association of America (the latter having been permitted to participate as *amicus curiae*), contend that Opinion No. 430 errs in concluding that competing fuel interests which would be aggrieved by Commission approval of a proposed change in a pipeline's rates have a right to intervene and participate in a hearing respecting the appropriateness of the proposed rate change. In our view, Opinion No. 430 deals adequately and correctly with this question, and we see no need for any change in the discussion or conclusions there set forth.

To facilitate the fullest possible consideration of this case, we shall grant the request of respondents referred to in footnote 1, *supra*, for leave to file their reply heretofore tendered to Washington Gas's answer to respondents' application for rehearing.

The Commission further finds:

Except as hereinabove set forth, the applications for rehearing of Opinion No. 430 and accompanying order enumerated hereinabove should be denied.

The Commission orders:

(A) Opinion No. 430 and accompanying order issued herein on June 2, 1964, is modified as hereinabove set forth, and as so modified is hereby affirmed.

(B) Respondents' request filed August 12, 1964, for leave to file a reply to the answer of Washington Gas Light Company to respondents' applications for rehearing, is granted.

(C) Except as hereinabove granted, the applications for rehearing of Opinion No. 430 filed in this proceeding are denied.

(D) The stay of Opinion No. 430 and accompanying order granted by our order issued July 20, 1964, is hereby dissolved, and the time limits which under Opinion No. 430 run as of the date of issuance of that opinion, shall run as of the date of this opinion.

(E) Except as herein modified, the ordering paragraphs of Opinion No. 430 remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL MAINE POWER COMPANY, PROJECT NO. 2325

ORDER ISSUING LICENSE (MAJOR)

(Issued October 15, 1964)

Joint application was filed on November 2, 1962, by Central Maine Power Company and Skowhegan Water Power Company, both of Augusta, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2325, known as the Weston Project, located on the Kennebec River, in Somerset County, Maine. On December 24, 1963, Central Maine Power Company filed a supplemental filing requesting, among other things, that Central Maine Power Company be substituted as sole Applicant for license for the project.[1]

[1] On December 16, 1963, Central Maine acquired the interests of Skowhegan Water Power Company in the water rights for the project.

According to the application for license, the project was constructed during the period 1919 through 1928. No significant changes in the project facilities were made thereafter. No lands of the United States are affected by the project.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the plans of the project structures affecting navigation have been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife resources.

Applicant requests a 50-year license, effective from the date of its issuance. In its order issued May 21, 1954, Docket No. E-6456 (13 FPC 1076), the Commission found the Kennebec River from its mouth at least up to Moosehead Lake to be a navigable water of the United States. The Weston Project is located downstream from Moosehead Lake. In accordance with the criteria set forth in our April 25, 1962, Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of May 1, 1954, and a termination date of December 31, 1993.

The Commission finds:

(1) The project is located on navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Upon the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 16,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Central Maine Power Company (Licensee) of Augusta, Maine, under Section 4(e) of the Federal Power Act (Act) for a period effective as of May 1, 1954, and terminating December 31, 1993, for the continued operation and maintenance of Weston Project No. 2325, located on the Kennebec River, Maine, a navigable water of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2325 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license.

Exhibit J: Sheet 1 (FPC No. 2325–1) General Map, Flowage Dam & Power Plant Areas;

Exhibit K: Sheets 1 to 5, incl. (FPC Nos. 2325–3 to –7, inclusive) Detail Map, Reservoir.

(ii) Project works consisting of: (1) A concrete gravity overflow dam on the North Channel, Kennebec River, 529 feet long and about 38 feet high provided with five bays of stop-logs totaling 267 feet in length, 168 feet of hinged flashboards, and two tainter gates, each 16 feet by 28 feet; a composite structure on the South Channel, Kennebec River, 392 feet in length consisting of a concrete hollow gravity dam 215 feet long provided with five bays of stop-logs, net length 177 feet; 20 feet of flashboards, and a log sluice with a tainter gate 18 feet by 14 feet, three slide gates, each 5.5 feet by 7 feet, an integral concrete powerhouse intake and substructure about 188 feet long provided with 12 slide gates, each 9 feet by 19 feet; (2) a reservoir about 12.6 miles long with an area of about 930 acres at normal pool elevation of 156 feet (USGS Datum); (3) a steel frame and brick powerhouse superstructure containing four hydroelectric generating units with a capacity of 3,000 kw each; and (4) appurtenant electrical and mechanical facilities—the location, nature, and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated as follows:

Exhibit L: Sheet 1 (FPC No. 2325–8) North and South Channel Dams, Plan.
Sheet 2 (FPC No. 2325–9) North Channel Dam, Elevation and Sections.
Sheet 3 (FPC No. 2325–10) South Channel Structures—Elevation. South Channel Dam—Sections.
Sheet 4 (FPC No. 2325–11) Powerhouse and Intake, Plan and Sections; and
Exhibit M: Seven typewritten pages "General Description and Specifications of Equipment and Appurtenances," filed in the Commission November 2, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", *infra*, p. 1114, which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of May 1, 1954:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by

the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 16,000 horsepower.

Article 31. The Commission reserves the right to determine at a later date what transmission facilities, if any, shall be included in this license as part of the project works.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

FORM L–3

(REVISED AUGUST 1, 1964)

TERMS AND CONDITIONS OF LICENSE FOR CONSTRUCTED PROJECT AFFECTING NAVIGABLE WATERS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, and statements described and designated as exhibits and approved by the Commission in its order as part of the license, until such change shall have been approved by the Commission: *Provided, however,* That if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed change which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. The project area and project works shall be in conformity with the approved exhibits referred to in Article 2 hereof. If the Licensee shall contemplate any substantial alteration in or addition to the project works, the Licensee shall submit to the Commission for approval amended, supplemental, or additional exhibits as provided in Article 2 hereof to show and describe such alteration or addition, together with the statement in writing setting forth the reasons which necessitate or justify such alteration or addition. Except when emergency shall require for the protection of life, health, or property, no substantial alteration or addition not in conformity with the approved exhibits shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct.

Article 4. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any

alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than 1 week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with navigation, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of cost, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 8. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 9. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 10. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 11. The actual legitimate original cost, estimated where not known, and the accrued depreciation of the project as of the effective date of the license shall be determined by the Commission in accordance with the Act and the rules and

regulations of the Commission, and such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date.

Article 12. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first 20 years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first 20 years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 13. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 14. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 15. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 16. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 17. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps,

beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 18. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 19. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 20. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 21. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume re-

sponsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 22. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 23. In the maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads.

Article 24. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure

to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 25. The Licensee shall, within one year from the date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 26. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of 3 years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 27. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines to a condition satisfactory to the Commission's authorized representative and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 28. The right of the Licensee and of its transferees and successors to use or occupy navigable waters of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 29. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

CHATTANOOGA GAS COMPANY, COMPLAINANT v. EAST TENNESSEE NATURAL GAS COMPANY, DEFENDANT, DOCKET NO. RP65-3

ORDER AMENDING ORDER INSTITUTING INVESTIGATION

(Issued October 15, 1964)

On October 1, 1964, *supra*, p. 882, upon the basis of the complaint filed July 29, 1964, and subsequent pleadings in the above entitled proceeding we issued an order herein instituting an investigation of the issues raised by Chattanooga's complaint concerning East Tennessee's tariff and its service agreement with Chattanooga.

On September 8, 1964, defendant East Tennessee tendered for filing its proposed FPC Gas Tariff, Fourth Revised Volume No. 1, in purported compliance with Paragraph B(v) of the Commission's order issued July 17, 1964, in defendant's certificate proceeding at Docket No. CP64-21.

On September 22, 1964, by letter addressed to the Secretary, complainant Chattannoga submitted allegations and objections to the aforementioned revised

tariff. These objections relate to the proposed tariff in general and raise questions, among others, of whether it creates inconsistencies in the treatment of customers and whether it may constitute an unlawful restraint of trade.

The above-identified letter from complainant requests that defendant's tender be accepted subject to the same condition as is contained in Paragraph (B) of the Commission's order issued July 29, 1964, in Docket No. G–20072; that the effectiveness of the tariff be suspended for one day, and that the Commission set complainant's additional allegations for public hearing.

The initial complaint and order for hearing herein, related to a tariff then in effect, not to the proposed tariff. While Chattanooga's letter regarding the proposed tariff does not constitute a formal complaint under our Rules, it was served upon East Tennessee which by letter filed October 5, 1964, denies Chattanooga's allegations. Under the circumstances we consider Chattanooga's letter an informal amendment of its initial complaint and shall provide that it have an opportunity to adduce evidence in support of the new allegations in a public hearing under the procedure prescribed in our order issued herein on October 1, 1964. To that end, the scope of the issues in our initial order herein should be broadened to include for hearing the proposed tariff filed by East Tennessee on September 8, 1964, and the issues with respect thereto raised by Chattanooga's letter dated September 22, 1964. However, since the proposed tariff does not provide for any change in the rate levels of existing rate schedules and since the result of the complaint proceedings here instituted will have only prospective effect, the requested suspension of the proposed tariff does not appear to be necessary or appropriate.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the issues raised by the complainant in its letter dated September 22, 1964, be set for public hearing subject to the procedure prescribed in our order issued herein October 1, 1964, and that the foregoing order should be amended so as to include for hearing East Tennessee's proposed revised tariff and the issues raised in the above-identified letter.

The Commission orders:

(A) The revised tariff filed by East Tennessee on September 8, 1964, and the issues raised by the complainant in its letter to the Secretary dated September 22, 1964, hereby are included for public hearing in conjunction with issues set for hearing in the order issued herein October 1, 1964, and the additional issues shall be subject to the procedure prescribed in the above-identified order.

(B) Except to the extent herein amended, the order issued October 1, 1964, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GEORGIA POWER COMPANY, PROJECT NO. 2341

ORDER ISSUING LICENSE (MINOR)

(Issued October 15, 1964)

Application was filed on February 18, 1963, by Georgia Power Company (Applicant) of Atlanta, Georgia, for a license under Section 4(e) of the Federal Power Act for constructed minor Project No. 2341, known as the Langdale Proj-

ect, located on the Chattahoochee River, in Chambers County, Alabama, and Harris County, Georgia.

The present powerhouse and a portion of the dam were constructed in 1908. The existing generating equipment was installed in 1924 and 1926 and no major construction or replacement of equipment was accomplished thereafter. The project was purchased by Applicant in 1930. By its order issued March 5, 1959, for Project No. 2177, the Commission found that the Apalachicola and the Chattahoochee Rivers from the mouth of the former at least up to a point on the latter in the vicinity of Atlanta, Georgia, at about river mile 300 are navigable waters of the United States (21 FPC 296, 302). The Langdale project is situated at mile 192.1 on the Chattahoochee River. No lands of the United States are affected by the project.

The Secretary of the Army and the Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned, and recommended for inclusion in any license for the project, certain conditions in the interest of navigation, including a condition that the Langdale project will not be operated in a manner which would adversely affect accomplishment of the authorized functions of the Corps' upstream multi-purpose West Point project and (2) a condition that would relieve the United States of the responsibility to compensate Applicant for any damage resulting from construction and operation of the West Point Project.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interest of fish and wildlife.

Although invited to do so, the Department of Health, Education, and Welfare has not reported on the application.

The State of Alabama, Department of Conservation, has advised that no evidence could be found that fish and wildlife resources are affected by the project.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of March 1, 1959, and a termination date of December 31, 1993.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Georgia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative

annual charge is 1,387 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a) insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Georgia Power Company (Licensee) of Atlanta, Georgia, under Sections 4(e) and 10(i) of the Act, for a period effective as of March 1, 1959, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2341, located on the Chattahoochee River a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2341 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) a 15 foot high rubble masonry dam having a 1,362 foot long free-crest spillway (el. 547.7 feet) and 530 feet of diversion walls and abutments; a concrete and brick powerhouse (35 feet x 245 feet in plan) which contains two Leffel turbines connected to two 520 kw Westinghouse generators; all other structures, fixtures, equipment, or facilities which are located in the project area and are used or useful in the maintenance and operation of the project; all rights and interests the possession of which are necessary or appropriate to the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $69.00.

Article 13. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of cost, such of its land and its rights-

of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 14. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 15. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 16. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 17. The Langdale Project No. 2341 shall not be operated in a manner which will adversely affect accomplishment of any authorized function of the West Point Project as determined by the Chief of Engineers, Department of the Army, or his authorized representatives.

Article 18. The United States shall not be liable for damages to the Licensee resulting from the construction and/or operation of the West Point Project.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NOS. G–1116 AND G–2506

ORDER DENYING APPLICATION FOR REHEARING AND GRANTING STAY

(Issued October 15, 1964)

Panhandle Eastern Pipe Line Company (Panhandle) on September 16, 1964, filed a petition for rehearing of our Opinions Nos. 269–B and 344–A which were issued August 20, 1964, 32 FPC 634 and 636, respectively.

In these opinions we held that Panhandle had failed to demonstrate any basis for making an allocation of the costs or profits of the Sneed and Liberal extraction plants, or even that there was justification for making any allocation. We therefore adhered to the general court-approved rule that, in the absence of any such showing, we would include *all* extraction costs in the pipeline's

cost of service and credit revenues. The effect of this determination is to limit Panhandle to the same rate of return on its extraction operations as it secures on all other operations directly relevant to its jurisdictional pipeline operations.

In its present petition, Panhandle reiterates many of the arguments which we rejected after full discussion in Opinions 344–A and 269–B. We see no reason for repeating what we said there in answer to these contentions, but a brief reiteration of the reasons why we are not reopening the record to permit Panhandle to attempt a new showing to justify an allocation may be of value.

While these dockets relate to Panhandle's rates for periods ending on December 31, 1954, and August 31, 1958, respectively, and while we are naturally reluctant to delay concluding these proceedings, we did not rest our refusal to reopen the record on this basis. If Panhandle, either in its petition of April 17, 1963, or in the present petition for rehearing, had gone beyond its formal rehearing requests and statements of the general areas in which it proposed to introduce evidence, and made some reasonable showing that a reopening would be likely to be fruitful, we might have been inclined to grant Panhandle's request. In the absence of any of such showing, however, we believe it would be an abuse of our discretion to prolong the proceedings.

Panhandle now suggests that our failure to establish standards for making an allocation deprived it of the essential knowledge which would permit a meaningful showing of what it could prove if a new hearing were to be ordered. This contention is without merit. In the first place, it is not for the Commission to prescribe standards of proof for securing an exception to a general rule. If any allocation of extraction costs and revenues can be justified, it is the pipeline's responsibility to propose a proper segregation which will not deprive pipeline natural gas customers of the collateral benefits accruing from the costs incurred in performing essential pipeline activities and will recompense them for the disadvantages of such collateral pipeline activities. In any event, the implication that the Commission has left Panhandle in the dark as to what was wrong with its previous efforts is unwarranted. As Panhandle admits, the Commission brief in the previous appeal from Opinion No. 334 listed a number of areas of deficiency in Panhandle's proof. Yet, in its 1963 petition to reopen the record, Panhandle contented itself with the general statement (at p. 10) that it "stands ready to supply additional factual information regarding these two plants and will, in any event, present evidence to assist the Commission in arriving at a proper solution to their vexing problem." Now, after the issuance of Opinions 269–B and 344–A, which set forth the areas in which Panhandle's showing was deficient, Panhandle still does not attempt to describe, even in general terms, the nature of any of the evidence it might be in a position to introduce.

If the existing record indicated that, while Panhandle's methodology was faulty, its underlying claim that most of the extraction costs and revenues were unrelated to its jurisdictional pipeline operations was probably correct, we might nevertheless feel it appropriate to order a new hearing. As we pointed out in Opinion 344–A, however, Panhandle's principal witness testified that "costs would not have been very much less than they were" if the extraction of natural gasoline had been limited to that portion of the total which was beneficial for pipeline purposes. Moreover, even if some unrelated costs could be identified, before any proportionate share of the extraction revenues could be assigned to Panhandle's stockholders, consideration would have to be given to any adverse effect upon Panhandle's jurisdictional customers resulting from the loss of cheap

pipeline expansibility and overall reduction in the Btu content of the gas stream.[1] In short, Panhandle's portrayal of its extraction operations as "a business separate and distinct from the natural gas pipeline business" is not borne out by the facts.

The orders accompanying Opinions Nos. 269–B and 344–A provided that Panhandle should within 45 days after issuance of the opinions file and serve a report of its cost of service, rates and refunds recomputed in accordance with the amended opinions, subject to Commission approval, and within 60 days after issuance of the amended opinions, should make the additional refunds in accordance with its report.

On September 29, 1964, Panhandle filed a motion for stay of Opinions Nos. 269–B and 344–A and accompanying orders, stating that it intends to seek judicial review if its application for rehearing is denied. In support of its application, Panhandle asserts that unless the orders are stayed it will suffer irreparable injury.

On October 5, 1964, Panhandle filed a report pursuant to paragraph (B) of Opinion Nos. 269–B and 344–A, showing that $8,449,876.85 of principal and $4,685,632.29 of interest is due to be refunded to its jurisdictional customers in compliance with both opinions, or a total refund of $13,135,509.14. Panhandle's calculations as to the amounts due each customer are set out in the appendix to this order. Pursuant to our previous orders herein, this report is subject to Commission approval and customers will be allowed until October 15, 1964, in which to file any objections. While we see no reason to stay this phase of our opinions, we will stay the actual payment of the refunds pending any timely petition for review.

The Commission finds:

The assignments of error and grounds for rehearing set forth in Panhandle's application for rehearing present no new facts or principles of law which were not considered by the Commission when it issued Opinion Nos. 269–B and 344–A, or which having now been considered warrant any change in or modification of said order.

The Commission orders:

(A) The application for rehearing filed by Panhandle Eastern Pipe Line Company on September 16, 1964, is hereby denied.

(B) The provisions requiring refunds of excess charges contained in ordering paragraphs (D) accompanying Opinion Nos. 269–B and 344–A are stayed until 60 days from the date of this order provided, however, if Panhandle within that time files a petition for court review of those opinions and orders, the refund requirements hereby are further stayed until 20 days after the issuance of final mandate upon completion of such court review.

---

[1] We note in passing, Panhandle's position that "[t]he propane butane extraction at Liberal could not, and did not, improve the efficiency of Panhandle's pipeline system". While it is not necessary to pass on this matter in view of our decision herein, we do not wish our silence to be understood as indicating that revenues from such extraction operation, to the extent the costs thereof could be segregated from the costs of "beneficial" extraction of natural gasoline, should not be credited in whole or in part. To the extent that such extraction reduces the Btu content of the pipeline gas stream below that which could be beneficial to its wholesale customers for natural gas, a serious question is presented as to whether the pipeline customers should not be compensated therefor. The factual basis for any such conclusion is now being considered in the *Sunray* case, Docket No. G–4281, *et al.* However, if it were otherwise appropriate to remand this case for further hearing we would need to receive evidence on this point as well.

COMMUNITY NATURAL GAS CO., INC., DOCKET NO. CP64-302; INDIANA NATURAL GAS CORPORATION, DOCKET NO. CP61-45

ORDER CONSOLIDATING PROCEEDINGS AND DEFERRING ACTION PENDING STATE JUDICIAL ACTION

(Issued October 16, 1964)

Community Natural Gas Co., Inc. (Community), an Indiana Corporation having its principal place of business in Owensville, Indiana, filed on June 17, 1964, an application (Docket No. CP64-302), and on August 13, 1964, a supplement thereto and on August 17, 1964, an amendment thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order of the Commission directing Texas Gas Transmission Corporation (Texas Gas) to establish physical connection of its transportation facilities with the facilities which Community proposes to construct, and to sell and deliver to Community the volume of natural gas estimated to be required for resale and distribution in the third year of operations in the town of Worthington, Indiana, all as more fully represented in the application in Docket No. CP64-302.

Community estimates its natural gas requirements as follows:

Year	Peak day (Mcf) [1]	Annual (Mcf) [1]
1st	444	49,917
2d	490	54,778
3d	538	59,937

[1] At 14.73 psia.

Applicant proposes to construct and operate a distribution system in Worthington; approximately 2.25 miles of 4-inch lateral transmission line from the proposed interconnection with Texas Gas to the city-gate of Worthington; and the necessary regulating, odorizing and heating facilities.

Community estimates the cost of construction of its project will be $226,160, which it proposes to finance by the issuance of stock in the amount of $90,000 and issuance of $136,000 of 20-year first mortgage bonds bearing interest at not more than 6½ percent. Of the 1,800 shares of stock to be issued, 1,500 shares will be purchased by board members and officers of the company, while 300 shares will be sold by private sale to individuals.

The supplement to the application alleges that Indiana Natural Gas Corporation (Indiana Natural) is also requesting an order of this Commission directing Texas Gas to supply it with natural gas for distribution in the town of Worthington. Community states that it has been granted a gas franchise by Ordinance No. 3—1963, dated August 26, 1963, passed by the Board of Trustees of the town of Worthington and that subsequently, on November 6, 1963, said Board of Trustees adopted Ordinance No. 4—1963, which ordinance repealed its Ordinance No. 282 issuing a gas franchise to Indiana Natural. Community claims it has a gas franchise in full force and effect with respect to its authority to construct a gas distribution system and render service in Worthington. It further claims that Indiana Natural does not possess an effective and valid franchise to render such service.

On September 24, 1964, Indiana Natural advised this Commission by letter that it had filed with the Indiana Public Service Commission a petition requesting said Commission to issue a show cause order against Community requiring Community to show cause why it should not submit itself to the jurisdiction of the Commission for the purpose of obtaining approval for the financing of Community's proposed construction of a natural gas distribution system within the town of Worthington. Indiana Natural further advised this Commission that it plans to file a declaratory judgment action in the Green County, Indiana Circuit Court to determine the franchise rights for the town of Worthington of Community and Indiana Natural.

Notice of application and date of hearing was issued in Docket No. CP61–45 by the Secretary of the Commission on November 9, 1961 (26 F.R. 10817). Thereafter, on November 22, 1961, notice was issued postponing the hearing scheduled for December 20, 1961, to a date to be thereafter fixed by further notice. Said notice of postponement was published in the Federal Register on November 30, 1961 (26 F.R. 11310). By notice issued by the Secretary of the Commission on February 15, 1964 (29 F.R. 2529), Docket No. CP61–45 was consolidated for hearing with Indiana Natural Gas Corporation, Docket No. CP63–292 for the reason that the financing proposed by Indiana Natural Gas Corporation covered all its properties including the proposed construction in Docket No. CP61–45. Thereafter, separate plans of financing were proposed and pursuant to due notice issued June 23, 1964, Docket No. CP63–292 was heard upon a separate record on July 20, 1964.

Since both Indiana Natural and Community seek to serve Worthington, the Commission would ordinarily order that these applications be consolidated and set for hearing. However, impending court action by Indiana Natural to determine which party holds a valid franchise may make a consolidated formal hearing unnecessary, since under Section 7(a) an applicant must show that it is "legally authorized to engage in the local distribution" of natural gas. While we are of the opinion that we have jurisdiction to determine the question of the legal authority of the competitive 7(a) applicants to render service in Worthington, it appears that this is a matter better left for consideration in the local state courts. Accordingly we deem it appropriate to defer action on these applications pending state court action.

The Commission orders:

(A) Protests or petitions to intervene in Docket No. CP64-302 may be filed with the Federal Power Commission, 441 G Street NW. Washington, D.C., 20426, in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before November 1, 1964.

(B) Action by this Commission on the above-docketed Section 7(a) applications is hereby deferred pending final determination by Indiana state courts as to the validity of the franchises held by applicants.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

JOHN B. HAWLEY, JR., TRUSTEE FOR TERRELL HAWLEY, DOCKET NO. CI65-148

DECLARATORY ORDER WITH RESPECT TO COVERAGE UNDER RATE SCHEDULE

(Issued October 16, 1964)

John B. Hawley, Jr., Trustee for Terrell Hawley (Hawley) on August 13, 1964, filed a petition for a declaratory order, pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, in Docket No. CI65-148 requesting the Commission to determine that Hawley's interest in sales of gas from Imbler Bros. Gas Unit, Section 20-34S-34W, Seward County, Kansas, to Northern Natural Gas Company (Northern) by Hugoton Plains Gas & Oil Company (Hugoton), is covered by Hugoton's FPC Gas Rate Schedule No. 1, particularly Supplement No. 15 thereto. Supplement No. 15 contains the 15.75¢ settlement rate approved by the Commission in Docket No. RI60-102 by order issued October 8, 1963, 30 FPC 973, for Hugoton's sales to Northern. Hawley indicates that Hugoton has taken the position that there is doubt as to whether it can lawfully make payments to Hawley on the basis of the 15.75¢ settlement rate which became effective as of April 7, 1960. Hugoton apparently believes that Hawley must make his own rate filing before he is entitled to payment based on the 15.75¢ settlement rate. Hugoton, however, has not filed a response to Hawley's petition.

Hawley and Hugoton each own an undivided ½ interest in the property from which the sale involved here is made. Hawley's predecessor and Hugoton entered into two agreements on August 1, 1951, with respect to their interests. One agreement, the gas sales agreement, provided for the sale of gas from Hawley's predecessor's ½ interest to Hugoton for resale to Northern at a price

of 9¼¢ per Mcf until January 1, 1960. Thereafter the price was to be 1¼¢ below the price paid by Northern to Hugoton with a minimum of 9¼¢ per Mcf, subject to BTU adjustment. The other agreement provided for operation of the well by Hugoton.

In support of its petition, Hawley states that it has always considered itself covered by Hugoton's certificate authorization and the rate schedule filed by Hugoton in connection therewith, as supplemented. Hawley points out that Hugoton's certificate application specifically included Hawley's interest in accordance with Hawley's express authorization for Hugoton to do so. Hawley also has received payments from Hugoton in accordance with his contract with Hugoton and Commission orders affecting Hugoton FPC Gas Rate Schedule No. 1 prior to the period involved here. Hawley also claims that Hugoton has never notified Hawley that Hugoton did not intend to cover Hawley's interest in its rate filings.

Since Hugoton's certificate application in Docket No. G–6086 relating to the subject sale included Hawley's interest, it is clear that the certificate authorization granted to Hugoton covers Hawley's interest. While Hugoton's FPC Gas Rate Schedule No. 1 does not specifically refer to Hawley's interest, it must be deemed to have covered Hawley's interest in light of Hugoton's certificate application and the payment by Hugoton to Hawley for Hawley's share of the gas sold to Northern in accordance with the agreement between Hawley and Hugoton and Hugoton's rate schedule. Hugoton under these circumstances is in no position to question Hawley's right to be covered by its rate schedule. We therefore conclude that Hawley is and always has been covered under Hugoton's FPC Gas Rate Schedule No. 1.

The Commission orders:

For the reasons set forth above, we hereby determine that Hawley's interest in the above-designated property is and always has been covered under Hugoton's FPC Gas Rate Schedule No. 1, as supplemented.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

KANSAS CITY POWER & LIGHT COMPANY, DOCKET NO. E–7177

ORDER AUTHORIZING SALE OF FACILITIES

(Issued October 16, 1964)

Kansas City Power & Light Company (Applicant), incorporated under the laws of the State of Missouri and qualified to do business as a foreign corporation in the State of Kansas, with its principal place of business at Kansas City, Missouri, filed an application on August 21, 1964, for an order pursuant to Section 203 of the Federal Power Act, requesting authorization to sell certain transmission facilities to the Board of Public Utilities of Kansas City, Kansas (Board).

Applicant is engaged in the generation, transmission, distribution, and sale of electric energy and to a minor extent in the distribution and sale of steam heat. Applicant furnishes electric service in Kansas City, Missouri, and portions of the surrounding territory in the counties of Cass, Carroll, Chariton, Clay, Howard, Jackson, Johnson, Lafayette, Pettis, Platte, Randolph and Saline, all

in the State of Missouri, and in the counties of Anderson, Bourbon, Coffey, Douglas, Franklin, Johnson, Leavenworth, Linn, Miami, Osage and Wyandotte, all in the State of Kansas. Steam heating service is furnished by Applicant in a portion of the downtown area of Kansas City, Missouri.

On January 31, 1964, Applicant acquired from the United States of America (Government) a certain 115 kw electric transmission line including substations and related rights-of-way which was authorized by Commission order issued August 20, 1963, in Docket No. E-7111, 30 FPC 515.

The Applicant and the Board of Public Utilities of Kansas City, Kansas, on July 8, 1964, entered into an agreement whereby the Applicant has agreed to sell and the Board has agreed to purchase a portion of the transmission facilities and related rights-of-way which the Applicant purchased from the Government. The facilities to be transferred from the Applicant to the Board consist of about seven miles of 115 kv line in Wyandotte County, Kansas, which extends from Johnson County, Kansas through Wyandotte County, Kansas to Missouri. The Applicant proposes to sell the facilities for $90,000, plus an amount equal to the amount of net additions, if any, to such facilities from June 28, 1963, to the closing date. The application recites that the consideration of $90,000 is the same as the Applicant's cost of these facilities from the Government.

The Agreement requires the Board to rebuild the line for 161 kv operation with June 1, 1965, the target date for completion. Applicant will rebuild the other recently purchased line sections for 161 kv operation and the total line will ultimately become part of the 161 kv loop around Kansas City, Missouri.

The Board will construct a new substation (Barber) interconnecting the purchased line section to its 69 kv system. The capacity of the substation will be in the range of 50,000 kva to 160,000 kva and the substation will be used as the principal point of interchange between the two systems. Transmission capacity of the line section, as reconstructed at 161 kv, is estimated to be 320,000 kw. Under the Agreement Applicant will be entitled to rent the line capacity not used by the Board. For this privilege, Applicant will pay a monthly rental calculated as follows: The sum of (a) fixed charges equal to $\frac{1}{12}$ of 7¼ percent of Applicant's pro rata share of the Board's investment in the transmission line including purchase price plus cost of voltage conversion, and (b) maintenance equal to $\frac{1}{12}$ of Applicant's pro rata share of the Board's costs for maintenance of the line. This rental is subject to the condition that it will not exceed 75% of the Board's fixed charges and costs of maintenance.

As a result of this disposition and the arrangements agreed upon by the Applicant and the Board, the Applicant represents that it will have available increased amounts of capacity for the transmission of power and energy between portions of its system and at the same time will be able to participate in coordinated electric operations mutually advantageous to the systems of Applicant and the Board.

Written notice of the application has been given to the State Corporation Commission of Kansas and the Public Service Commission of Missouri and to the Governor of each of those States. Notice was also published in the Federal Register on September 11, 1964 (29 F.R. 12857), stating that any person desiring to be heard or to make any protests with reference to said application should on or before September 21, 1964, file with the Federal Power Commission, Washington, D.C., 20426 petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No petition or protest or request to be heard in opposition to the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 14, 1957, *Interstate Power Company, Kansas City Power & Light Company*, Docket No. E-6737 (1 FPC 663).

(2) By the proposed sale of facilities, Applicant will dispose of part of its facilities subject to the jurisdiction of the Commission within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed sale of facilities of Applicant, as described above upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed sale by Applicant of the aforementioned transmission line facilities and related rights-of-way all as described above, are authorized and approved upon the terms and conditions and for the purposes set forth in the application, subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, services, accounts, evaluation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MOOSE CREEK RANCH, INC., PROJECT NOS. 2353 AND 1996

ORDER ISSUING A NEW LICENSE (MINOR) AND DISMISSING INCOMPLETE APPLICATION FOR NEW LICENSE (MINOR)

(Issued October 16, 1964)

Application was filed on March 11, 1963, and supplemented on March 9, 1964, by Moose Creek Ranch, Inc. (Applicant), of Orofino, Idaho, for a new license under the Federal Power Act (Act) for Project No. 2353, located on North Fork of Moose Creek, in Idaho County, Idaho, and affecting lands of the United States within the Nezperce National Forest.

The original license for the project, then designated as Project No. 1996, was issued to Moose Creek Ranches, Inc., of Lewiston, Idaho, for a period of 10 years, effective as of March 1, 1950. Prior to the expiration of that license, the licensee of record filed on February 16, 1960, an incomplete application for its renewal.

However, during the pendency of the incomplete application, the project properties comprising Project No. 1996 were sold to Moose Creek Ranch, Inc., which filed the March 11, 1963, application mentioned above. This latter application was docketed in the Commission as an application for license for Project No. 2353 although the project works are essentially the same as those comprising Project No. 1996. Inasmuch as the application for Project No. 1996 was never completed and is still pending, it should be dismissed.

The Forest Service, Department of Agriculture, in reporting on the application for Project No. 2353, recommended for inclusion in any new license for the project, certain conditions in the interests of fish and wildlife resources.

The Department of the Interior, in reporting on the same application, recommends for inclusion in any new license for the project, certain conditions also in the interests of fish and wildlife resources.

The Fish and Game Department of the State of Idaho recommended for inclusion in any new license for the project conditions in the interests of fish and wildlife similar to those recommended by the Department of the Interior.

The Department of Health, Education, and Welfare has stated that it is not expected that the project would cause any water supply, pollution control or vector control problems.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Idaho, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the application has been given. No protests or petitions to intervene have been received. Except for the aforementioned incomplete application for the project, which we are herein dismissing, no conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a new license for the project will not interfere or be inconsistent with the purposes for which the Nezperce National Forest was created or acquired.

(5) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy and enjoyment of its lands by the project (3.7 acres) is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

(7) The exhibit designated and described in paragraph (B) below conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued under Sections 4(e) and 10(i) of the Act to Moose Creek Ranch, Inc. (Licensee), of Orofino, Idaho, for a period of 10 years, effective as of March 1, 1960, for the continued operation and maintenance of minor Project No. 2353, located on North Fork of Moose Creek, in Idaho County, Idaho, and affecting lands of the United States within the Nezperce National Forest, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2353 consists of:

(i) all lands constituting the project area and enclosed by the project boundary, and the following constructed project works:

(ii) a concrete diversion dam 6 feet high and 108 feet long; a wood flume 97 feet long; a small frame powerhouse containing a 33-horsepower water wheel and a 24-kva generator; approximately .8 mile of 2,300-volt transmission line; and appurtenant facilities:

the said lands and project works being more specifically shown and described by a certain exhibit filed with the application for license and which is designated and described as follows:

Exhibit K: (FPC No. 2353–1) entitled "Power Site-Moose Creek Ranch, Inc.—Orofino, Idaho," signed on January 22, 1963, by D. Kenneth Christensen for Moose Creek Ranch, Inc.

(C) This license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 15. The Denil-type fishway which has been constructed as part of the project shall be effectively operated from March 1 to July 31 annually. The licensee shall modify the period of operation upon request by the Forest Service.

Article 16. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways, and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be ordered by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 17. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $5.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its land, $5.00.

(D) The exhibit designated and described in paragraph (B) above is hereby approved as part of this license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(F) The aforementioned incomplete application for license for Project No. 1996 is hereby dismissed.

(G) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black

CITIES SERVICE GAS COMPANY DOCKET NO. RP64-9; AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), AR64-1, ET AL.; COLUMBIAN FUEL CORPORATION, RI61-316, RI61-518, RI62-49; CITIES SERVICE OIL COMPANY, RI63-485 AND RI65-269

ORDER GRANTING INTERVENTION, SEVERING PROCEEDINGS, CONSOLIDATING PROCEEDINGS, DENYING IN PART AND GRANTING IN PART MOTION FOR RECONSIDERATION AND MODIFICATION OF ORDER ISSUED SEPTEMBER 9, 1964

(Issued October 19, 1964)

By order issued on September 9, 1964, 32 FPC 720, the Commission, on motion filed by Cities Service Gas Company (Gas Company), provided that the issue of allowance for gas purchased from affiliated suppliers would be tried in a separate phase of Docket No. RP64-9. In that order the Commission stated that: "the test period to be used in the trial of the affiliated supplier issue is to be the same test period that is utilized in the trial of the other issues." Additionally, Gas Company was ordered to file its direct testimony and exhibits on the affiliated suppliers' cost on or before October 19, 1964.

On September 17, 1964, Cities Service Oil Company (Oil Company) and Columbian Fuel Corporation (Columbian) [1] filed a joint petition for leave to intervene in the above-entitled proceeding and, also, a joint motion for reconsideration and modification of our order issued September 9, 1964.

In their petition for leave to intervene, Movants state that they are affiliated with Gas Company and had assumed that the issue of gas sales made by them to the Gas Company would be tried in a separately docketed proceeding involving their rates for sales to the Gas Company. They further state that pursuant to the Commission's order of September 9, 1964, their rates for the sales to Gas Company will now be tried in this proceeding and, therefore, intervention in this proceeding is necessary to protect their interest in these premises.

In their motion for reconsideration and modification of our order issued September 9, 1964, Movants request:

(1) Deferral of the affiliated purchase gas cost issue in Docket No. RP64-9 pending determination of their rates in pending Section 4(e) proceedings and Area Rate Proceedings;

---

[1] Hereinafter designated jointly as "Movants."

(2) In the alternative, if the Commission requires the parties to go forward with the trial of this issue in Docket No. RP64–9, then Movants request the following relief:

(a) This issue be tried in a separately docketed proceeding;

(b) Movants be granted additional time to January 7, 1965, for service of their testimony and exhibits in this proceeding; and

(c) Calendar year 1963 be designated as the test period;

(3) That the Commission grant such other and further relief as it may deem appropriate in the premises.

In support of their request for deferral, Oil Company and Columbian state that all of the rate schedules under which they sell gas to Gas Company are presently the subject of pending Section 4(e) proceedings or the Area Rate Proceeding in Docket No. AR64–1, *et al.* Additionally, they state that the question of the proper basis for computing the allowance in a pipeline cost of service for gas purchased from an affiliated producer has been made a special issue by the Commission in Docket No. AR64–1, *et al.*, a proceeding wherein Oil Company and Columbian are Respondents.

The collection by a pipeline company of any possible excessive rates and charges for any prolonged period of time even though collected under a refund obligation, as here, affords the consumers only a "somewhat illusory" bond of protection (*Federal Power Commission* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 154). Therefore the deferral of the trial of the affiliated supplier cost issue is not consistent with the public interest. However, as an alternative to their request for deferral in their petition for leave to intervene, Movants request the Commission to consolidate their pending dockets involving sales to the Gas Company with the proceeding in Docket No. RP64–9. The consolidation of those pending Section 4(e) proceedings would permit a final determination of the just and reasonable charges for the transactions herein involved and would be consistent with our responsibilities under the Natural Gas Act. Accordingly, we will order the consolidation of the pending Section 4(e) proceedings[2] with the trial of the affiliated purchased gas cost issue in Docket No. RP64–9. Inasmuch as Docket Nos. RI61–316, RI61–518, and RI62–49 have been previously consolidated in the Hugoton Anadarko Area Rate Proceeding, Docket No. AR64–1, *et al.*, those proceedings will be severed from that area rate proceeding.

Movants request that the affiliated purchased gas cost issue be docketed as a separate proceeding "so that [they] will not be required to participate and be charged with the proceedings in other phases of this case which do not affect their rates for sales to the Gas Company" (joint petition for leave to intervene, p. 12). However, there is no need to add to the number of docketed proceedings on hand by assigning a separate number to the trial of an issue inherently involved in a Section 4(e) pipeline proceeding. Furthermore, the separate trial of this issue provided by our order issued September 9, 1964, will permit Movants to concentrate on this issue without being burdened by the trial of the issues in which they may have no interest. Therefore, the request to separately docket the trial of this issue should be denied.

In support of their request for additional time for preparation of evidence with regard to the subject issue, Movants state that the personnel responsible for the presentation of their evidence are presently "actively engaged in preparing data and doing other work in connection with various Commission pro-

[2] Those cases are as follows: Oil Company: Order issued October 12, 1960 (no docket number assigned), and Docket No. RI63–485. Columbian: Docket Nos. RI61–316, RI61–518, and RI62–49.

ceedings, including among others, those at Docket No. AR61–2, *et al.*, AR64–1, *et al.*, AR64–2, *et al.*" Additionally, Movants state that their accounting procedures and methods are presently in the process of being changed from a conventional tabulating equipment to a full computer data processing system. Movants request for additional time should be granted to the extent hereinafter ordered.

In support of their request to designate the calendar year of 1963 as the test period, Movants state that the data for 1963 would conform to the "known changes doctrine" and would be more representative and reliable for the purposes herein involved, as well as being more susceptible of compilation in a much shorter period of time. Additionally, Movants state that "the Gas Company has agreed to stipulate that data for the calendar year 1963 shall be considered as typical and representative of similar data for the test year on which the Gas Company is basing its rate increase." In view of these representations, and Gas Company's stipulation, Movants' request to submit evidence using the calendar year 1963 as the test period should be granted.

The Commission finds:

(1) Good cause exists for accepting for filing Movants joint petition for leave to intervene and for permitting Movants to intervene in Docket No. RP64–9 as hereinafter ordered.

(2) The motion filed on September 17, 1964, by the Oil Company and Columbian should be granted in part and denied in part as hereinafter ordered.

The Commission orders:

(A) Oil Company and Columbian are hereby permitted to intervene in Docket No. RP64–9 subject to the Rules and Regulations of the Commission: *Provided, however,* that the participation of each petitioner shall be limited to matters affecting asserted rights and interests specifically set forth in the petition to intervene; and, *Provided, further,* that the admission of each petitioner shall not be construed as recognition by the Commission that it may be aggrieved by any order or orders entered in Docket No. RP64–9.

(B) The request by Oil Company and Columbian to defer the trial of the purchased gas cost issue in this proceeding pending determination of their rates in pending Section 4(e) proceedings and Area Rate Proceedings is hereby denied.

(C) Docket Nos. RI61–316, RI61–518, and RI62–49 are hereby severed from the proceedings in Docket No. AR64–1, *et al.* The proceedings instituted by order issued October 12, 1960, relating to Supplement No. 3 to Oil Company's FPC Gas Rate Schedule No. 42 (hereinafter to be designated as Docket No. RI65–269 and the proceedings at Docket Nos. RI63–485, RI61–316, RI61–518, RI62–49 are hereby consolidated with Docket No. RP64–9 for the purposes of hearing and determination of the affiliated purchase gas cost issue.

(D) The request to separately docket the affiliated purchased gas cost issue is hereby denied.

(E) The request by Oil Company and Columbian for an extension of time within which to file their prepared testimony on the affiliated purchase gas cost issue is granted to the following extent: Paragraph (D) of the order issued September 9, 1964, is hereby modified to provide that the testimony and exhibits shall be filed with the Presiding Examiner and all parties of record as follows: Gas Company, Oil Company, and Columbian on or before December 21, 1964; Staff on or before February 23, 1965; Interveners on or before March 8, 1965.

(F) Paragraph (E) of the order issued herein on September 9, 1964, is hereby modified so that the prehearing conference established therein shall be held on

March 23, 1965, without limitation upon the authority of the Presiding Examiner to convene conferences prior to, or subsequent to, the date herein fixed.

(G) The order issued herein on September 9, 1964, is hereby modified to permit Movants to submit evidence using the calendar year 1963 as the test period.

(H) In all other respects our order issued on September 9, 1964, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-53

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 19, 1964)

On August 24, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-53 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 4.5 miles of 8⅝-inch O.D. pipeline looping a portion of the pipeline facilities providing natural gas service to the City of El Paso, Texas, and surrounding areas, all as more fully set forth in the application.

The proposed facilities are for the purpose of enabling delivery of approximately 29,000 Mcf per day from Applicant's California mainline system into the area presently served by Applicant's 16-inch and 12¾-inch O.D. pipeline from its El Paso mainline system. The proposed facilities will permit operation of the combination 16-inch and 12¾-inch O.D. pipelines at pressures approximating the original design pressure of 125 psig instead of the present 175 psig maximum.

The estimated cost of the facilities is $99,700, which will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-46

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 19, 1964)

On August 10, 1964, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-46 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities to deliver natural gas to Marathon Oil Company (Marathon) in interstate commerce in Cass County, Missouri, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate a measuring and regulating station on its "State Line Lateral" in the vicinity of Cass County, Missouri, and Johnson County, Kansas, and to construct and operate 2.4 miles of 2½-inch pipeline connecting the proposed station with a delivery point to Marathon in the vicinity of its secondary recovery oil project in Cass County, Missouri.

Marathon has entered into an industrial contract with Panhandle which provides for Panhandle to deliver an estimated 150,000 Mcf of natural gas annually on an interruptible basis to Marathon, with daily obligations not to exceed 500 Mcf.

The measuring and regulating station will be constructed at an estimated cost of $5,200 and the pipeline at an estimated cost of $37,800. Panhandle will pay

for construction of the station with funds on hand, but will be reimbursed by Marathon for all costs incurred in the construction of the pipeline and will enter all funds received under account 271 of the Uniform System of Accounts.

A temporary certificate was issued to Applicant in this docket by Commission letter dated September 11, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant by means of the proposed facilities are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 90 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF COLORADO, PROJECT NO. 2187

ORDER DENYING APPLICATION FOR REHEARING

(Issued October 19, 1964)

On September 24, 1964, Public Service Company of Colorado (Applicant), filed application for rehearing, pursuant to Section 313(a) of the Federal Power Act, on the Commission's license order issued August 27, 1964, 32 FPC 663, for Project No. 2187, located on South Clear Creek, a tributary stream of the South Platte River in Clear Creek County, Colorado, and affecting lands of the United States within the Aarapaho National Forest and other lands of the United States.

Applicant seeks modification of the license order to exempt from provisions of Articles 16 and 20 of said order, the Green Lake Reservoir and certain land and property owned in fee by the Green and Clear Lakes Company, its wholly owned subsidiary, hereinafter referred to as the "subsidiary."

Applicant contends that Articles 16 and 20 provide free access to the public for recreational purposes on property owned by the "subsidiary" which is not a party to this proceeding. It further contends that these Articles are so broad that they would unlawfully take from the "subsidiary" for public recreational use, without a hearing before the Commission, vested property rights in the Green Lake Reservoir and land owned by the "subsidiary" in fee since 1887. As noted by the Applicant the "subsidiary" is, as such, not a party to this proceeding.

The Green Lake Reservoir was included by Applicant in its application as part of the complete project works sought to be licensed. Furthermore, Applicant in its application cited full ownership over the Company which apparently owns in fee the Green Lake Reservoir and certain lands necessary for the project. There is no indication that Applicant desires to withdraw the Green Lake Reservoir from Project No. 2187 or that its "subsidiary" seeks a license for the project or any portion thereof. It should be noted that in the original application for the project filed in 1955, the Green and Clear Lakes Company was a joint applicant. The evidence before the Commission as presented by Applicant clearly establishes the Green Lake Reservoir as a part of Project No. 2187 and thereby subject to all the conditions of the license issued therefor, including Articles 16 and 20.

In further support of its application Applicant alleges that the depth of the water in Green Lake Reservoir, limited access routes to its waters and lack of protected recreational facilities are all hazards which would endanger the lives of the public if access were permitted.

In this regard we wish to point out that Article 16 of the license makes provision for reserving from public access hazardous project areas for the purpose of protecting life, health and property. Article 20 requires Applicant to file a recreational use plan for the project, within one year of the effective date of the license, for Commission approval. Applicant may at that time propose the reservation of those areas which it deems hazardous in accordance with Article 16, subject to Commission approval. The licensee will be afforded opportunity for a hearing on all license conditions, in which the issues have not already been determined and thus, will receive adequate protection under the license.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791a–825r), that the Public Service Company of Colorado's application filed September 24, 1964, for rehearing of the order issued August 27, 1964, granting a license for Project No. 2187 be denied.

The Commission orders:

The aforesaid application for rehearing of the Commission's order issued on August 27, 1964, for Project No. 2187 be and is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65–33

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 19, 1964)

On August 6, 1964, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP65–33 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of metering facilities and the transportation of natural gas in interstate commerce to the American Potash and Chemical Corporation (American Potash) for special heat processing purposes in two existing plants and a proposed plant, all as more fully set forth in the application.

American Potash is now building a new plant to be completed January 1, 1965, which in addition to two existing plants will require on November 1, 1966, and thereafter 3,000 Mcf of 1,000 Btu natural gas daily to be delivered at points near Applicant's Main Line Valve No. 547 in Lowndes County, Mississippi (near Hamilton, Mississippi), at a pressure base of 15.025 psia. Natural gas requirements may be (1) increased in accordance with option provisions of the contract dated July 10, 1964, up to a maximum contract demand of 20,000 Mcf daily and (2) interrupted or curtailed under specified conditions of necessity of use by firm resale customers.

The estimated cost of the proposed metering facilities is $15,900, which will be defrayed from general funds or revolving credit funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed construction and operation of facilities and transportation of natural gas as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Tennessee Gas Transmission Company, authorizing the construction and operation of facilities and transportation of natural gas as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) The certificate issued hereby shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) Applicant shall not utilize facilities certificate in paragraph (A) above for the transportation of more than 3,000 Mcf daily to American Potash and Chemical Corporation.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDING ET AL. (PERMIAN BASIN), DOCKET NO. AR61-1, ET AL.

ORDER GRANTING IN PART AND DENYING IN PART MOTION FOR RECONSIDERATION AND FOR ADDITIONAL TIME

(Issued October 20, 1964)

The presiding examiner's initial decision and proposed order in the above-entitled matter was issued on September 17, 1964. On September 25, 1964, this

Commission issued its order extending to November 23, 1964, the time for filing exceptions to the initial decision, extending to December 24, 1964, the time for filing replies to the exceptions, setting December 7, 1964, as the date for requests for allotments of time on oral argument and fixing January 12, 1965, for commencement for oral argument. Motions for extension of time received prior to September 25, 1964, were disposed of by the same order.

On October 5, 1964, Continental Oil Company, The Pure Oil Company, Shell Oil Company, Socony Mobil Oil Company, Inc., Humble Oil & Refining Company, Gulf Oil Corporation, Pan American Petroleum Corporation, and Texaco Inc. filed a motion for reconsideration of our aforesaid order of September 25, 1964, requesting that the time for filing briefs on exceptions be extended to December 21, 1964, that the time for filing briefs opposing exceptions be extended to February 22, 1965, that the oral argument be deferred until March 2, 1965, and that 3 days be permitted for oral argument. By letter filed October 12, 1964 Sinclair Oil & Gas Co. joins in Continental's motion.

We have carefully considered the reasons advanced for the requested extensions of time. We are aware of the difficulties faced by counsel for the moving parties. The novelty and importance of the case, the extent of the record, the complications attending the presentation of joint briefs, and the pendency of other matters involving the moving parties were among the factors which led the Commission to provide for extensions of time in its order of September 25, 1964. Under all the circumstances, we do not think that an additional extension should be granted with respect to the filing of exceptions to the initial decision. In view of the statements of the moving parties with respect to the time required for preparing joint replies to the exceptions, we think the time for filing such replies should be extended to January 15, 1965. By reason of this extension, it is necessary to reschedule the commencement of oral argument from January 12, 1965, to February 8, 1965. The time for filing requests for allotments of time for oral argument will be extended from December 7, 1964, to December 30, 1964.

The aforesaid order of September 25, 1964, fixed no limit upon the time to be devoted to oral argument, but provided that no less than two days should be allotted thereto. No determination of the limits of oral argument will be made prior to receiving the requests for time allotments.

The Commission finds:

(1) No new facts or principles of law have been presented on this motion for reconsideration, and for additional time, with respect to the requested extension of time for filing briefs on exceptions, which either were not fully considered by the Commission prior to its order herein or, having been now considered, warrant further hearing, modification, reconsideration, or revocation of said order in this respect.

(2) Good cause has been shown by the moving parties for extending the time for filing briefs opposing exceptions to January 15, 1965.

(3) The time for filing requests for allotment of time on oral argument, and the time for commencing oral argument, should be fixed as hereinafter provided.

The Commission orders:

(A) The time for filing briefs opposing exceptions in the above-entitled matter is hereby extended to January 15, 1965.

(B) The time for commencing oral argument in the above-entitled matter is hereby rescheduled for 10 a.m. on February 8, 1965.

(C) The time for filing requests for allotments of time for oral argument is hereby extended to December 30, 1964.

(D) The motion for reconsideration and for additional time filed herein by Continental Oil Company, The Pure Oil Company, Shell Oil Company, Socony Mobil Oil Company, Inc., Humble Oil & Refining Company, Gulf Oil Corporation, Pan American Petroleum Corporation, and Texaco Inc. and the joinder therein by Sinclair Oil & Gas Company be and the same hereby is in all other respects denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP64-309

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 20, 1964)

On June 24, 1964, Central Illinois Public Service Company (Applicant) filed in Docket No. CP64-309 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its natural gas transmission system with facilities proposed to be constructed by Applicant at Woodson, Illinois, and to sell and deliver natural gas to Applicant for resale and distribution in the Village of Woodson, Illinois, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate lateral transmission facilities from a proposed metering and regulating station of Panhandle to the Village of Woodson. Applicant will also construct and operate the necessary distribution facilities to provide the proposed service. The estimated cost of the project is $39,360, and is to be financed with internal funds.

The application shows the estimated annual and peak day requirements of natural gas in Mcf to Applicant are as follows:

	1st year	2d year	3d year
Annual (Mcf)	10,850	14,610	16,390
Peak day (Mcf)	103	139	157

Approvals of this proposal by the President and Board of Trustees of the Village of Woodson and by the Illinois Commerce Commission were issued March 9, 1964, and June 2, 1964, respectively.

On July 30, 1964, Panhandle answered the application stating it had no objection to the granting of the application, and if directed by the Commission it will construct a metering and regulating station to which the proposed facilities of Applicant will be connected.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on September 24, 1964 (29 F.R. 13285). No protest or petition to intervene in opposition to the granting of the application has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, Central Illinois Public Service Company, an Illinois corporation having its principal place of business in Quincy, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and convenient and in the public interest that Panhandle Eastern Pipe Line Company be directed to establish physical connection of its natural gas transmission facilities with the facilities proposed by the Applicant and to sell and deliver through such connecting facility the required volume of natural gas to Applicant, as set forth in the application and as hereinafter ordered.

(4) The requirement that Panhandle serve Applicant, as proposed, will not place any undue burden upon Panhandle nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant, Central Illinois Public Service Company, and to sell and deliver up to 157 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Panhandle within 6 months from the date of issuance of this order.

(C) Panhandle shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP64–296

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued October 20, 1964)

On June 10, 1964, Columbia Gulf Transmission Company (Applicant) filed in Docket No. CP64–296 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon certain natural gas facilities all located in St. Mary Parish, Louisiana, all as more fully set forth in the application.

Specifically, Applicant proposes (1) to abandon by sale to Humble Oil & Refining Company, or a subsidiary thereof, (Humble) 12.5 miles of Applicant's 13.1 mile, 12-inch, Lake Sand Field Line; (2) to abandon in place 0.1 mile of its 4-inch Bayou Sale Line, and (3) to abandon and salvage two measuring stations.

The facilities to be abandoned were constructed to take gas for the account of United Fuel Gas Company (United Fuel) from properties operated by Pan American Petroleum Corporation in the Lake Sand Field, St. Mary and Iberia Parishes, Louisiana, and from properties operated by Texaco Inc. in the Bayou Sale Field, St. Mary Parish, Louisiana. Applicant states that United Fuel has entered into new contracts with Texaco Inc. and Pan American providing for a

new delivery point for gas purchased by United Fuel; hence, when the delivery point changes take place, the facilities to be abandoned will no longer be required. Further, Applicant has been advised by United Fuel that for the foreseeable future the latter does not contemplate the purchase of gas supplies in the area in which the subject facilities are located.

Humble will pay Applicant a price equal to the original cost less accumulated depreciation for the portion of the Lake Sand Field Line herein proposed to be abandoned. The application indicates that Humble will utilize said line in connection with pressure maintenance operations in the Bayou Sale Field, St. Mary Parish, Louisiana.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 5, 1958, in Docket No. G–15524 (20 FPC 681).

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. CI61–1024, CI61–1244, CI61–1281 AND CI63–615

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 20, 1964)

Socony Mobil Oil Company, Inc. (Socony), has filed in the above-indicated dockets applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the sale of natural gas in interstate commerce for resale as set forth in the tabulation which is appended hereto, and as more fully set forth in the respective applications and any amendments or supplements thereto, all on file with the Commission.

It appears that the purported granting of certificate authorization in these four dockets by the Presiding Examiner's Initial Decision in Docket No. CI61–153, *et al.*, issued July 13, 1964, was ineffectual because said four dockets were severed from Docket No. CI61–153, *et al.* (originally designated as Docket No. G–19417, *et al.*), by our order issued May 28, 1964, 31 FPC 1325, which amended the rate settlement order issued May 5, 1964, 31 FPC 1101, in Docket No. G–12196, *et al.*, by specifically providing for such severance, among others.

Accordingly, the subject applications in Docket Nos. CI61–1024, CI61–1244, CI61–1281 and CI63–615 remain open and should be disposed of as hereinafter ordered.

Socony has filed related FPC Gas Rate Schedules and proposes to initiate natural gas service in interstate commerce as indicated in the appended tabulation. The sales certificated herein are at prices set forth in the Commission's Order Approving Rate Settlement Proposal, etc., issued May 5, 1964, as supplemented on May 28 and June 26, 1964, in Docket No. G–12193, *et al.*, 31 FPC 1593.

After due notice, no petition to intervene, notice of intervention or protests to the granting of any of the subject applications has been filed.

At a hearing held on October 16, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, exhibits, amendments and supplements thereto, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Socony Mobil Oil Company, Inc., a New York corporation having its principal place of business in New York, New York, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore referred to and as set forth in the tabulation appended hereto, as more fully described in the respective applications, amendments and/or supplements herein, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sales of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the sales by Applicant, Socony Mobil Oil Company, Inc., of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore referred to and as set forth in the tabulation appended hereto, as more fully described in the respective applications, amendments, supplements and exhibits in the proceedings.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicant herein. Further, our action in these proceedings shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the aforesaid contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of the sale of natural gas subject to said certificates.

(D) Any allowance for take-or-pay provisions and any upward B.t.u. adjustment provisions in the related rate schedules involved in these four dockets are subject to the ultimate disposition with respect to such provisions in the rule making proceedings in Docket Nos. R–199 and R–200; however, Socony will not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-31

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued October 20, 1964)

On August 5, 1964, Southern Natural Gas Company (Applicant), filed in Docket No. CP65-31, an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural-gas facilities by sale to Alabama Gas Corporation (Alabama Gas), all as more fully set forth in the application.

Applicant proposes to sell to Alabama Gas, one of its existing customers, 6.588 miles of its 8-inch Montgomery line and loop, its Coosada-Millbrook tap line and measuring station, and its Montgomery measuring station site.

Applicant proposes to retire its present Montgomery measuring station and replace it and the Coosada-Millbrook measuring station with a single measuring station having the approximate equivalent design capacity of the stations being replaced. The abandonment by sale of the above-described facilities will not have any effect upon Applicant's present and future operations and service.

Applicant will receive a total of $140,953 for the facilities abandoned by sale.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on October 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by sale to Alabama Gas is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant, Southern Natural Gas Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-99

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 21, 1964)

On July 20, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-99 an application to amend further the Commission's order, issued February 18, 1964, 31 FPC 422, in said docket, as amended, by authorizing Applicant to continue to participate, as to its one-third interest, in the testing of the Jackson Prairie Storage Unit through December 31, 1964, all as more fully set forth in the application to amend.

The order of February 18, 1964, authorized Applicant to construct and operate certain facilities; to sell and deliver natural gas and, with respect to Applicant's interest therein, to share in the cost of the facilities to be constructed and operated by The Washington Water Power Company, all solely for the purpose of testing the Jackson Prairie Storage Unit. Such authorization was granted to terminate at 12:01 a.m., August 1, 1964.

Applicant states that testing operations have not proceeded within the authorized time limit because the gas injection rate has been considerably less than anticipated; therefore, Applicant requests an extension of the time limit on its participation in the testing project through December 31, 1964.

By letter, dated July 30, 1964, Applicant was issued a temporary certificate authorizing the subject extension.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 11, 1964 (29 F.R. 12856). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 18, 1964, in Docket No. CP64-99, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 18, 1964, in Docket No. CP64-99, as amended, be and the same is hereby further amended by authorizing Applicant to continue to participate, as to its one-third interest, in the testing of the Jackson Prairie Storage Unit, including the sale and delivery of natural gas for such purpose, through December 31, 1964, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. CP65-4

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued October 21, 1964)

On July 6, 1964, Iowa Southern Utilities Company (Applicant) filed in Docket No. CP65-4 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the Applicant and to sell natural gas to Applicant for distribution in Middletown, Iowa, all as more fully set forth in the application.

Applicant proposes to construct and operate a local distribution system in the community of Middletown, Iowa, and environs. The natural gas requirements for the proposed distribution system will be obtained from Michigan Wisconsin at a new delivery point adjacent to the north corporate limits of Middletown. Approval for the proposed distribution system and service has been issued by Middletown but not by the Iowa Commerce Commission.

Applicant is presently providing electric service to the community of Middletown, Iowa.

Applicant estimates the volumes of natural gas necessary to meet annual and maximum day requirements for the first 3 years of operation are as follows:

	1st Year	2d Year	3d Year
Annual (Mcf)	10,263	13,300	15,365
Maximum (Mcf)	105	136	157

All gas volumes are at 14.73 psia.

The estimated cost of the proposed facilities in the third year will be $30,987 and financed by Applicant.

Michigan Wisconsin filed its answer on August 6, 1964, stating that it had no objection to the granting of the order since Applicant is an existing customer and it proposes to serve the *de minimis* requirements of Middletown without the allocation of an additional gas supply, and since Applicant is not requesting the construction of any lateral line facilities by the pipeline company.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on September 15, 1964 (29 F.R. 12948). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket G-669 (5 FPC 953).

(2) Applicant, Iowa Southern Utilities Company, a Delaware corporation having its principal place of business in Centerville, Iowa, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 157 Mcf of natural gas on a maximum day and 15,365 Mcf annually for distribution and resale as hereinbefore described.

(4) The requirement that Michigan Wisconsin serve Applicant, as hereinafter ordered, will not (a) place an undue burden upon Michigan Wisconsin, (b) require Michigan Wisconsin to enlarge its transportation facilities or (c) impair Michigan Wisconsin's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in Middletown, Iowa, within 1 year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 157 Mcf of natural gas on a maximum day and 15,365 Mcf annually to Applicant under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall (1) obtain appropriate authorization from the Iowa Commerce Commission for facilities to render the service proposed for Middletown, Iowa environs, and (2) be prepared to receive service as directed herein within 1 year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-112

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 21, 1964)

On August 3, 1964, Northern Natural Gas Company (Petitioner) filed in Docket No. CP64-112 a petition to amend the order of the Commission issuing a certificate of public convenience and necessity, issued February 10, 1964, 31 FPC 390. Said order, among other things, authorized Petitioner to increase its saleable system capacity by 20,031 Mcf per day. Included in this amount was an increase for the Municipal Utilities of Coon Rapids, Iowa (Coon Rapids), from present contract demand volume of 850 Mcf per day to 900 Mcf, for the 1964-65 heating season. In the subject petition, Petitioner seeks authority to rescind the 50 Mcf increase since Coon Rapids is no longer desirous of undertaking the increased volume.

Petitioner seeks further amendment of the order of February 10, 1964, by requesting authorization to increase the contract demand volume to the Village of Pender, Nebraska, from 925 Mcf per day as presently authorized to 1,000 Mcf, as requested by said Village of Pender.

Due notice of the subject petition to amend has been given by publication in the Federal Register on September 25, 1964 (29 F.R. 13353). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 10, 1964, in Docket No. CP64-112 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 10, 1964, in Docket No. CP64-112 be and the same is hereby amended by authorizing Northern Natural Gas Company to rescind the 50 Mcf of contract demand increase granted to the Municipal Utilities of Coon Rapids, Iowa, thereby leaving in effect the present contract demand of 850 Mcf; and authorizing Northern to increase the contract demand volume to the Village of Pender, Nebraska, from 925 Mcf per day as presently authorized to 1,000 Mcf per day.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANIES—BUDGET-TYPE CERTIFICATE APPLICATIONS FOR GAS-SALES TRANSPORTATION AND UNDERGROUND GAS STORAGE FACILITIES, DOCKET NO. R-254

ORDER NO. 285-A

AMENDING SECTION 157.7(D)(4) OF REGULATIONS UNDER THE NATURAL GAS ACT AND GRANTING IN PART AND DENYING IN PART MOTIONS FOR RECONSIDERATION

(Issued October 21, 1964)*

Natural Gas Pipeline Company of America (Natural) and Northern Illinois Gas Company (Northern Illinois) filed Motions for Reconsideration of Order No. 285 (29 F.R. 11749), issued August 12, 1964, 32 FPC 606, amending § 157.7 of the Regulations Under the Natural Gas Act. By that order we permitted the filing of budget-type applications for certification of gas sales facilities and for facilities for the testing and development of gas storage reservoirs.

Both Natural and Northern Illinois request deletion of the provision of § 157.7(c)(1)(i) of the Regulations prohibiting the filing of a budget-type application to serve a distributor presently served or proposed to be served by more than one natural gas company. In situations where more than one natural gas company serves a distributor there is a distinct possibility that the other natural gas companies will desire to intervene in expansion applications of their

*Published in Federal Register on October 29, 1964 (29 F.R. 14722).

competitors in order to protect a competitive position. Accordingly, we will continue to exclude this type of expansion from budget-type applications.

Natural and Northern Illinois request that budget-type applications be permitted for service to distributors in communities not having natural gas service. They observe that we denied similar requests in Order No. 285 for the reason that there existed a possibility of controversy between distributors proposing new service, but they contend that our requirement that the distributors have all requisite local and state authorization eliminates that possibility. However, we have been confronted three times in recent years with situations in which two distributors claimed to have requisite local authorization to serve the same community.[1] Furthermore competing fuel interests, by the action proposed, would be precluded from the opportunity to present their positions in such a case. Accordingly, we will not expand § 157.7(c)(1)(i) to include service to distributors in communities not being served.

Northern Illinois requests modification of § 157.7(c)(2) which limits budget-type authorization to deliveries to any one distributor or consumer to a maximum of 100,000 Mcf annually and which prohibits boiler fuel use of the gas so delivered. Northern Illinois suggests that these restrictions should carry a limitation for the first 3 years of the gas sales facilities, contending that it is unreasonable to impose such restrictions without time limit. These restrictions only apply to budget-type applications and will be retained. Whenever a natural gas company desires to avoid these restrictions it can file a separate application for the specific service not permitted under these limitations of budget-type applications.

Natural requests amendment of § 157.7(d)(4) which provides for the filing of budget-type applications requesting authorization of the construction and operation of pipeline and compression facilities for the testing and development of underground storage reservoirs for a 3 year period. That section limits budget-type applications to total expenditures of $3,000,000 over the 3 year period and $1,000,000 for any one year. Natural suggests that the 3 year period be expanded to 4 years and that the dollar limits be raised to $6,000,000 over the 4 year period and $2,000,000 for any one year. We do not agree that the time limit should be extended but, upon reconsideration, we do see the advisability of permitting, in given instances, the expenditure of somewhat greater amounts than have been specifically set forth in this section. Accordingly, § 157.7(d)(4) will be amended to permit the filing of budget-type applications proposing construction in excess of the dollar limits previously prescribed when accompanied by a request for waiver of that limitation.

Upon consideration of the Motions for Reconsideration, *the Commission further finds:*

(1) Adoption of the amendment to the Regulations Under the Natural Gas Act contained in paragraph (A) below is necessary and appropriate to the administration of the Natural Gas Act.

(2) Good cause exists for the adoption herein of the amendment to § 157.7 embodied in the new paragraph (d)(4)(ii) thereof without giving the prior notice provided for by § 4 of the Administrative Procedure Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7, 15, and 16 thereof (52 Stat. 824, 829, 830; 56 Stat. 83, 84; 15 U.S.C. 717f, 717n, 717o), *orders:*

(A) Subparagraph (4) of § 157.7(d), Subchapter E, Chapter I, Title 18 of the Code of Federal Regulations, as prescribed by Order No. 285 (32 FPC 606, 29 F.R. 11749), is amended by designating the present text thereof as "(4) (i)" and adding a new subdivision (ii) to read as follows:

§ 157.7 Abbreviated applications.

* * * * * * *

(d) *Underground gas storage facilities—budget-type application.*

* * * * * * *

(4) (i) * * *

(ii) Any application proposing the construction of facilities having an estimated cost in excess of the amounts specified in subdivision (i) hereof shall be accompanied by a request for waiver of the provisions of such subdivision and will be granted only for good cause shown.

(B) The amendment adopted herein shall become effective on the date of issuance of this order.

(C) To the extent not granted above the Motions for Reconsideration are denied.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP64-18

FINDINGS AND ORDER AMENDING ORDER ISSUED JULY 24, 1964

(Issued October 21, 1964)

On August 19, 1964, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP64-18 an application to amend the Commission's order issued July 24, 1964, 32 FPC 349, in said docket by authorizing certain minor revisions to the summer contract demands of five existing resale customers of Applicant, all as more fully set forth in the application to amend.

The order of July 24, 1964, modified and adopted the decision of the presiding examiner in Docket No. CP64-18, wherein Applicant was authorized to construct and operate certain facilities and to increase natural gas sales to certain of its present customers. Applicant states that as a result of revisions in market estimates, five of Applicant's customers involved in this docket wish to revise their summer contract demands.

Applicant proposes herein to revise as follows the summer contract demands of the following customers:

Northern Indiana Fuel & Light Company

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 24, 1964 (29 F.R. 13286). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 24, 1964, in Docket No. CP64-18 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued July 24, 1964, in Docket No. CP64-18 be and the same is hereby amended by authorizing certain minor revisions to the summer contract demands of five existing resale customers, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY AND KENTUCKY GAS TRANSMISSION CORPORATION, DOCKET NO. CP62-238

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 21, 1964)

On July 1, 1964, Kentucky Gas Transmission Corporation (Applicant) filed in Docket No. CP62-238 an application to amend the Commission's order issued October 10, 1962, 28 FPC 579, in said docket, by authorizing Applicant to construct and operate 0.2 mile of 8-inch pipeline in lieu of constructing and operating the 0.5 mile of 10-inch pipeline heretofore authorized by said order, all as more fully set forth in the application to amend.

The order of October 10, 1962, issued a certificate of public convenience and necessity jointly to United Fuel Gas Company and Applicant authorizing, among other things, Applicant to construct and operate 0.5 mile of 10-inch pipeline in Menifee County, Kentucky, to provide an interconnection between Applicant's 20-inch Menifee-to-Foster transmission line and a 12-inch Eastern Kentucky Line (Line KZ). Said order also authorized Applicant to acquire from Louisville Gas and Electric Company and operate Line KZ.

Applicant states that when it developed plans to terminate injection of gas into and to abandon its Menifee Storage Field, the injection Line F-8" became available for use in connecting the Menifee-to-Foster Line with Line KZ. Accordingly, construction of the 0.5 mile of 10-inch line was deferred in order to avoid unnecessary duplication of facilities. The abandonment of the Menifee Storage Field was granted by Commission order, issued June 2, 1964, in Docket No. CP64-171.

Consequently, Applicant now proposes to utilize a portion of Line F-8" to accomplish the proposed connection. In order to do so Applicant will construct and operate two segments of 8-inch jumper line, totaling approximately 0.2 mile, to connect Line F-8" with Line KZ and the Menifee-to-Foster Line. The 8-inch jumper lines will be in lieu of the 10-inch line originally authorized in this proceeding.

The estimated cost of the substitute facilities is $9,500, which cost is $13,320 less than the estimated cost of the facilities originally authorized.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 8, 1964 (29 F.R. 12949). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 10, 1962, in Docket No. CP62-238 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 10, 1962, in Docket No. CP62-238 be and the same is hereby amended by authorizing Applicant to construct and operate 0.2 mile of 8-inch pipeline in lieu of constructing and operating the 0.5 mile of 10-inch pipeline heretofore authorized by said order, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61–2, ET AL.

ORDER AFFIRMING RULING OF PRESIDING EXAMINER AND DENYING APPEAL THEREFROM

(Issued October 22, 1964)*

On August 21, 1964, Hunt Oil Company and 13 other entities representing Hunt gas and oil interests, and the Placid Oil Company (hereinafter referred to as Hunt) filed an appeal with the Commission from the Presiding Examiner's ruling on August 12, 1964, denying a motion made by Hunt on June 25, 1964. Hunt's motion requested that it be given opportunity to conduct cross-examination with respect to the responses of producer-respondents to certain Commission Questionnaires used to obtain basic statistical and other data for use in this proceeding. Alternatively, Hunt requested that all testimony and exhibits based upon such data be excluded from evidence, or that subpoenas *duces tecum* and *ad testificandum* be issued to enable Hunt to cross-examine as requested. Memoranda responding to Hunt's motion were filed by various parties and the Staff.

On September 8, 1964, the Presiding Examiner certified Hunt's appeal to us pursuant to Section 1.28(a) of our Rules of Practice and Procedure, providing for Commission decision of appeals from rulings of presiding officers where prompt decision is necessary to prevent detriment to the public interest.

We have considered with care the Examiner's detailed and well-reasoned ruling, and the arguments advanced for and against it. We conclude that, for the reasons set forth in the Examiner's ruling, his denial of Hunt's motion for cross examination or other relief should be affirmed, and Hunt's appeal from such ruling should be denied without prejudice to Hunt's right to argue as to the weight to be accorded to the evidence in the proceeding.

The Commission orders:

The ruling of the Presiding Examiner on August 12, 1964, denying Hunt's motion for cross examination or other relief filed June 25, 1964, is hereby affirmed, and Hunt's appeal from such ruling filed on August 21, 1964, is hereby denied.

Commissioner Ross *concurs* in the denial of the instant motion solely because of the lateness of its filing.

---

* Reconsideration denied by order issued December 15, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

KNOXVILLE UTILITIES BOARD, ET AL., COMPLAINANT v. EAST TENNESSEE NATURAL GAS COMPANY, DEFENDANT; DOCKET NO. RP65-4

ORDER INSTITUTING INVESTIGATION, PROVIDING FOR HEARING AND DESIGNATING PROCEDURE

(Issued October 22, 1964)

On August 14, 1964, Knoxville Utilities Board, *et al.* (Knoxville), comprising 25 persons[1] engaged in purchasing gas for resale, filed a formal complaint under Section 5(a) of the Natural Gas Act naming their supplier, East Tennessee Natural Gas Company (East Tennessee) defendant. Therein Knoxville alleges, among other things, that during the year 1963 East Tennessee sold approximately 28,577,000 Mcf of gas to resale customers within the State of Tennessee, realizing therefrom revenues of $12,362,000; that these revenues are excessive to the extent of $644,848 and that therefore East Tennessee's rates are not the lowest reasonable rates.

Knoxville supports its allegations with a cost of service study prepared from East Tennessee's annual report for 1963 filed with the Commission; requests that the Commission institute an investigation into the current resale rates of East Tennessee under Section 5 of the Act, and states that the current rates and charges against which complaint is made, became effective as of April 5, 1960, by Commission order issued August 9, 1962, 28 FPC 308, approving the settlement in Docket Nos. G-12264, G-17330 and G-20072.

East Tennessee's answer, filed September 14, 1964, as authorized by a 14-day extension of time, contends that the complaint should be dismissed because it fails to present the foundation for a Section 5(a) investigation. In support of this contention, East Tennessee states, among other things, that complainants' figures are based on an abnormally cold year and therefore are not representative of future conditions; that complainants' use of a 6⅝% rate of return would allow East Tennessee only a 8.29% return on common equity; that the current rate levels of East Tennessee are not excessive; that the complaint neglects consideration of the pending certificate proceedings in Docket No. CP64-270, *et al.*, and of a contingent proposal therein for reduction of defendant's rates and in conclusion, that during the pendency of the above-identified proceedings no "intelligent determination with respect to East Tennessee's rates for the future" is possible.

The pleadings leave unresolved substantial questions of fact and law bearing upon the issues of whether the rates and charges complained against are excessive and if so, what rates and charges would constitute the lowest reasonable rates pursuant to Section 5(a) of the Act. East Tennessee contends that a public hearing herein should be denied or deferred on account of pending certificate proceedings. However, the complaint is filed under Section 5 of the Act

[1] The complainants are: Knoxville Utilities Board, United Cities Gas Company, Volunteer Natural Gas Company, Cleveland Natural Gas Company, Athens Utility Board, Citizens Gas Utility District, Cookeville Gas Department, Elk River Public Utility District, Englewood Natural Gas System, First Utility District of Maury County, Gallatin Natural Gas System, Harriman Utility Board, Jefferson-Cocke Utility District, Lenoir City Utilities Board, Lewisburg Gas Department, Livingston Gas Department, Loudon Utilities Board, Madisonville Gas Company, Marion County Natural Gas Company, Middle Tennessee Utility District, Oak Ridge Utility District, City of Rockwood Natural Gas Company, Sevier County Utility District, City of Sweetwater, Unicoi Natural Gas Utility District.

and while in some areas, the problems thus presented may have relationship with possible future developments in certificate proceedings, the allegations of the complaint on the other hand, bear upon existing facts and conditions, and upon rates presently effective. It is our view therefore, that the pendency of certificate applications relating to future operations does not constitute a valid basis for deferring a public hearing on the complaint.

It appears that a public hearing should be held in order to afford all parties opportunity to present evidence concerning the issues herein; that Knoxville bears the obligation of adducing evidentiary support of its allegations and of going forward first in the presentation of its case-in-chief; that the issues herein should be determined with the greatest possible expedition in conformity with Section 2.59 of the Commission's Rules of Practice and Procedure and to that end each party should have the opportunity to understand and evaluate the positions of the other parties. All matters which can be fully resolved without formal trial should be eliminated from hearing and settled by stipulation.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the issues raised by the complaint filed by Knoxville be set for public hearing and that the proceeding be expedited in accordance with the procedures set out below.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 5, 15 and 16 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a public hearing be held concerning the matters involved and the issues presented in this proceeding.

(B) At the hearing herein, the complainant, Knoxville, shall have the obligation of going forward first with the presentation of its direct case-in-chief.

(C) Knoxville shall serve the prepared testimony and exhibits constituting its case-in-chief upon all parties, on or before November 17, 1964.

(D) The defendant, East Tennessee, shall serve the prepared testimony and exhibits comprising its direct case upon all parties on or before December 18, 1964.

(E) The Commission Staff and all other parties to this proceeding proposing to present evidence herein, shall serve their prepared testimony and exhibits on all parties on or before January 5, 1965.

(F) The Presiding Examiner shall set the date for the service of Knoxville's rebuttal case and, if determined necessary and appropriate without unduly delaying the proceeding, he may provide for filing of cross-rebuttal between the parties (including Staff) on a date prior to the date set for service of Knoxville's rebuttal.

(G) Presiding Examiner Seymour Wenner, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see Delegation of Authority, 27 F.R. 4276, etc.) shall fix the date of hearing by notice thereof; shall preside at the prehearing conference and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order.

(H) Without limitation upon the authority of the Presiding Examiner to convene conferences prior to, or subsequent to the date herein fixed, pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner shall commence at 10:00 A.M. (EST), on January 12, 1965, in a hearing room of the Federal

Power Commission, 441 G Street NW., Washington, D.C., 20426, for the purpose of effectuating the intent of the Commission as hereinabove set out in the body of this order.

(I) Notices and petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's Rules of Practice and Procedure, Sections 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)] on or before November 6, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63-1

ORDER REJECTING AND DENYING APPLICATIONS FOR REHEARING

(Issued October 22, 1964)

Natural Gas Pipeline Company of America on October 1, 1964, and Texas Eastern Transmission Corporation and Texas Gas Transmission Corporation on October 2, 1964, have filed applications for rehearing of our Opinion No. 428–A and Order issued September 2, 1964, 32 FPC 687, on rehearing in the above-entitled proceeding. On September 30, 1964, 32 FPC 879, in Opinion No. 428–B and Order we rejected in part and denied in part an application of United Gas Pipe Line Company, directed to Opinion No. 428–A and Order, where we confirmed with certain modifications Opinion No. 428 and Order, which determined the cost of service and rates of United.

Natural reiterates points made in its application for rehearing of Opinion No. 428 and continues its argument that it should not be charged the same rates as United's Central Zone customers. There is no provision in the statute or the rules for a second application for rehearing where we have not changed our determination. Compare *Philadelphia Electric Power Co.* v. *F.P.C.*, 156 F. 2d 648 (CA3). Therefore, we shall reject Natural's application for rehearing.

Texas Eastern argues that the procedure with respect to the payment of refunds set forth in Opinion No. 428–A and Order is beyond the authority of the Commission and contrary to previous rate settlements involving Texas Eastern and United. Opinion No. 428–A and Order does not set forth when refunds shall be paid or to whom it shall be paid, but provides that United shall retain amounts to be refunded subject to further proceedings. Therefore, Opinion No. 428–A and Order is not a final order with respect to the payment of refunds, and Texas Eastern's application for rehearing should be denied.

Texas Gas files its application for rehearing with respect to Opinion No. 428–A and Order out of an abundance of caution based on the grounds in its original application for rehearing filed June 12, 1964. To the extent Texas Gas' application applies to changes in Opinion No. 428–A and Order, it will be denied. To the extent it represents a mere reiteration of objections to determinations made in Opinion No. 428 and Order, it will be rejected.

The Commission finds:

(1) Natural's application for rehearing, and Texas Gas' application for rehearing to the extent specified below, should be rejected.

(2) The assignments of error and grounds for rehearing set forth in Texas Eastern's application for rehearing and those portions of Texas Gas' application for rehearing which are properly filed present no facts or principles of law which

were not considered by the Commission when it issued its Opinion No. 428–A or, which having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order.

The Commission orders:

(A) Natural's application for rehearing, and Texas Gas' application for rehearing, to the extent it represents a reiteration of objections to determinations made in Opinion No. 428 and Order, are hereby rejected.

(B) Texas Eastern's application for rehearing, and Texas Gas' application for rehearing to the extent it is directed toward determinations changed in Opinion No. 428–B and Order, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP65–1

ORDER DENYING MOTION TO REJECT PROPOSED RATE INCREASE FILING AND MODIFYING PRIOR PROCEDURAL ORDER

(Issued October 22, 1964)

On August 6, 1964, staff counsel filed a motion requesting the Commission to reject and refuse to make effective changed rates proposed by United Gas Pipe Line Company (United) in the filing tendered in the present docket on July 15, 1964. United's rate filing, to become effective September 1, 1964, proposed changes in rates to pipeline and distribution customers amounting to about $2,390,000 above those being collected subject to refund in Docket No. RP63–1. Answers were filed opposing the staff's motion by United, Southern Natural Gas Company, companies in the Consolidated Natural Gas System, Texas Eastern Transmission Corporation, Texas Gas Transmission Corporation, Natural Gas Pipeline Company of America, and Consolidated Edison Company of New York, and an answer was filed by the Memphis Light, Gas and Water Division in support of the motion.

By order of August 24, 1964, 32 FPC 653, we suspended the proposed rates for the 5-month period ending February 1, 1965, and provided for a procedure to expedite the proceeding. We also provided that the suspension order was without prejudice to such action as we might deem necessary and proper with respect to staff counsel's motion and the answers filed to it.

On September 1, 1964, a joint motion was filed by Laclede Gas Company, Illinois Power Company, Missouri Natural Gas Company, St. Charles Gas Corporation, Mississippi River Fuel Corporation and Mississippi River Transmission Corporation to amend or clarify our procedural order issued August 24, 1964, and to defer further action on rehearing granted in Docket No. RP63–1. Our order denying rehearing in Docket No. RP63–1 was issued on September 2, 1964, with Opinion No. 428–A, 32 FPC 687.

Staff argues that the rate-changing mechanisms of the Natural Gas Act, and the Regulations prescribed thereunder, are unavailable to any natural gas company whose rates have once been the subject of a Section 4 or 5 proceeding. Inasmuch as a United rate increase was reviewed and modified in Opinion No. 428, staff concludes that, as a matter of law, United's subsequent filing in RP65–1 must be rejected. United's only remedy for inadequate rates, contends staff, is to petition the Commission to modify Opinion No. 428 rates, which petition, if

granted, would initiate a proceeding under Section 5. Staff argues, however, that even if United's present filing were rejected, a petition for modification would be unmeritorious.

In support of its position the staff points out United would nullify the prospective effect of Opinion No. 428, for, it says, the consumer will never reap the benefit of just and reasonable rates legislatively determined by the Commission if the pipeline can neutralize them with a further rate filing. The staff cites *United States* v. *Corrick*, 298 U.S. 435, 439-440 (1936), relating to the powers of the Secretary of Agriculture under the Packers and Stockyard Act, *Arizona Grocery Co.* v. *A.T. & S.F. Ry. Co.*, 284 U.S. 370, relating to the I.C.C., and *In the Matter of Minimum Rates Applicable to Air Freight*, Order No. E-17370, August 28, 1961, decided by the Civil Aeronautics Board and the corresponding statutes.

On the Gas Act itself the staff argues that Section 4(d) does not grant an absolute privilege to change a prior rate. As *Mobile* says[1] (350 U.S. at p. 339) Section 4(d) is a prohibition rather than a grant of power. Section 4(d) refers, the staff says, to a "change * * * made by any natural-gas company in any such rate," and this means rates established by the company under Section 4(c). In contrast, Commission rates are established under the provisions of Section 5(a), however the proceeding was instituted, and this provides for fixing the rates by order.

Apart from its principal contention urging rejection of United's filing, staff contends that United must bear the burden of showing changed circumstances. Otherwise the staff indicates, citing *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 606 (CA3, 1956), the rate filing will be dismissed to the extent such changed circumstances are not shown.

Those opposing the staff motion contend that Section 4 of the Gas Act permits them to file rate changes regardless of whether the rates in effect are company-made or Commission-made rates. Citing a number of cases they rely principally on the *Mobile* case and the *Memphis* case[2] to show that the purpose of the Act, in general, is to leave the rate making power in the seller of gas subject to the review of the Commission. The seller, they say, must always have unobstructed access to Section 4(d) to comply with the duty to file just and reasonable rates and the Commission is given no power to reject such rate filings.

Consolidated Edison, Texas Gas, and Southern Natural suggest that the proper solution is to follow the procedure utilized by the Commission and approved by the court in *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, cited above, where a rate increase was filed by Panhandle only 75 days after rates were prescribed by the Commission in a very full proceeding. The Commission did not reject but suspended the filing. After the submittal of Panhandle's evidence it eliminated certain issues that had been treated fully in the previous opinion since it found that no significant intervening change had occurred, and this procedure was upheld by the court.

We are convinced that staff's contention—that this Commission must as a matter of law reject all rate filings submitted subsequent to a Commission order under either Section 4 or 5 of the Natural Gas Act—is legally insupportable. Nor do we believe that the Commission is completely without discretion to impose by rule or by order a reasonable moratorium on filing of rate increases under Section 4(d) of the Act in circumstances where the orderly administration
